Lab: Identifying Elements, Compounds, and Mixtures**Directions:** Read through the review chart below and answer the pre-lab questions.

Elements	Compound	Mixture
<ul style="list-style-type: none"> pure substance made up of only one kind of atom All elements are located on the <u>Periodic Table of Elements</u> Cannot be separated into any simpler form chemically or physically 	<p>1 2 or more elements that are <u>chemically combined</u> to make a new substance</p> <p>2 Properties of the elements used to make the compound are changed</p>	<ul style="list-style-type: none"> 2 or more elements <i>physically</i> combined Elements used keep their original properties (not chemically combined) <p>Homogeneous - two or more substance that are evenly mixed, unable to identify the different substances</p> <p>Heterogeneous - a mixture in which different substances can be identified</p>

Pre-Lab Questions:

1. What is the difference between an element and a compound?

Element is a pure substance / compounds are 2 or more elements

2. How is a heterogeneous mixture different from a homogeneous mixture?

Heterogeneous is like a tossed salad while homogeneous - is like saltwater (solutions)

3. How is the way a mixture is combined DIFFERENT from how a compound is combined?

*Mixtures are simply physically mixed while compounds are chemically combined.*4. What is easier to separate, a mixture or a compound? Explain why?*Mixtures require less energy typically. Compound require more chem.*5. Which can be found on the periodic table: elements, compounds or mixtures?*4*

Synthesis Reaction: when two or more substances

during a chemical reaction and become one.

Example: $A + B \rightarrow AB$ https://youtu.be/Y3kDZXP4_5A?t=222CombineSynthesis : to build**2. Decomposition Reaction:** describes when one

into two or more simpler substances.

Example: $AB \rightarrow A + B$ <https://youtu.be/MUensqImzXM>compound breaks downDecompose : to break down
break apart, etc.**3. Single Displacement Reaction:** this is when one element

in a compound.

Example: $A + BC \rightarrow AC + B$ <https://youtu.be/OxGjbHzxQSI>replaces another"Like when two people are dancing
and another cuts in."**4. Double Displacement Reaction:** this is when two elements

in a compound.

Example: $AB + DC \rightarrow AC + DB$ ReactantsProducts"Here we have two pairs of
dancers, couple AB & couple -
DC. Both couples switch
dancing partners with one
another."

PREP

Types of Chemical Reactions

Directions: Write the correct letter on the line that best defines each term.

Term	Definition
<u>F</u> 1. Double Displacement	A. when two or more substances combine together during a chemical reaction and become one. ($A + B \rightarrow AB$)
<u>B</u> 2. Decomposition Reaction	B. describes when one substance breaks down into two or more simpler substances. ($AB \rightarrow A + B$)
<u>D</u> 3. Single - Displacement	D. this is when one element replaces another in a compound. ($A + BC \rightarrow AC + B$)
<u>A</u> 4. Synthesis Reaction	F. this is when two elements replace each other in a compound ($AB + DC \rightarrow AC + DB$)

Directions: Identify the types of chemical reaction using the word bank below:

Synthesis Reaction

Single Displacement

Decomposition Reaction

Double Displacement

Double Replc. 1. $\text{AgNO}_3 + \text{H}_2\text{S} \rightarrow \text{Ag}_2\text{S} + 2\text{HNO}_3$

Synthesis 2. $\text{Al} + \text{N}_2 \rightarrow 2\text{AlN}$

Single Reple. 3. $\text{Fe}_2\text{O}_3 + \text{H}_2 \rightarrow 2\text{Fe} + 3\text{H}_2\text{O}$

Decomposition 4. $\text{Mg}(\text{ClO}_3)_2 \rightarrow \text{Mg} + \text{Cl}_2 + \text{O}_2$

Balancing Chemical Equation Notes

Quick Review

Chemical Formula- representation of how elements combine to make up compound

Shows TWO things

- the elements that make up the compound
- the number of atoms of each element called subscripts

H_2O = the 2 is a subscript.

(H = 2 and O = 1)

Coefficient is the number of molecules in a chemical reaction.

2KI = the 2 represents a coefficient.

So, 2 KI units are involved in this reaction.

Or KI and KI

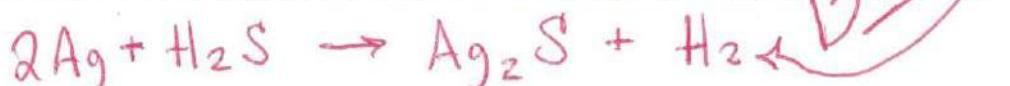

Examples:

Chemical Equation - describe ratios of atoms in a simple way

Balancing Chemical Equations:

Kinds of Atoms	Number of Atoms	Single Replacement
Ag	$\text{Ag} + \text{H}_2\text{S} \rightarrow \text{Ag}_2\text{S} + \text{H}_2$	
metal	$\text{Ag} : 1 \Big 2$	$\text{Ag} : 2 \Big 2$ ✓
H alkali	$\text{H} : 2 \Big 2 \rightarrow \text{H} : 2 \Big 2$	✓
S non metal	$\text{S} : 1 \Big 1$	$\text{S} : 1 \Big 1$ ✓

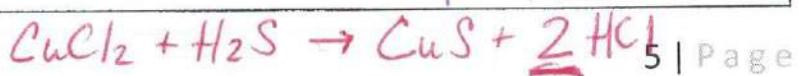

Label Reaction type

Kinds of Atoms	Number of Atoms		Synthesis
Mg	<u>2</u> Mg + O ₂ → <u>2</u> MgO		
Mg metal	Mg : 1 2	→	Mg : 1 2 ✓
O nonmetal	O : 2 2		O : 1 2 ✓

Kinds of Atoms	Number of Atoms		Single Displacement
Cl	$\text{Cl}_2 + \text{NaBr} \rightarrow \underline{2}\text{NaCl} + \text{Br}$	Br $\cancel{2}$ ← (exception)	"Bromine is a diatomic element so the 2 becomes a subscript."
Na	Na : 1 2	→	Na : 1 2
Br	Br : 1 2		Br : 1 2

Kinds of Atoms	Number of Atoms		Double Displacement
Cu	$\text{CuCl}_2 + \text{H}_2\text{S} \rightarrow \text{CuS} + \underline{2}\text{HCl}$		
metal	Cu : 1 1		Cu : 1 1
Cl	Cl : 2 2	→	Cl : 1 2
alkali	H : 2 2		H : 1 2
S	S : 1 1		S : 1 1

Balancing Act

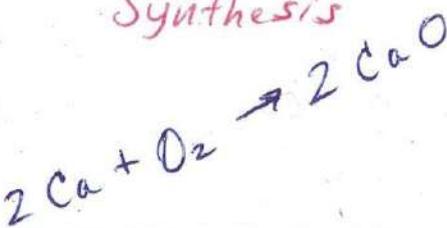

Atoms are not created or destroyed during a chemical reaction. Scientists know that there must be the *same* number of atoms on *each side* of the equation. REMEMBER – you may *add coefficients* in front of the chemical formulas, but you *can not* add or change the *subscripts*.

$$\begin{array}{c} \text{Ca} = 1 \\ \text{O} = 2 \end{array} \left| \begin{array}{c} 2 \\ 2 \end{array} \right.$$

$$\begin{array}{c} \text{Ca} = 1 \\ \text{O} = 1 \end{array} \left| \begin{array}{c} 2 \\ 2 \end{array} \right. \checkmark$$

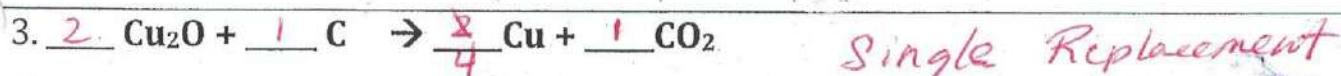

Synthesis

$$\begin{array}{c} \text{C} = 3 \\ \text{H} = 8 \\ \text{O} = 2 \end{array} \left| \begin{array}{c} 3 \\ 8 \\ 10 \end{array} \right.$$

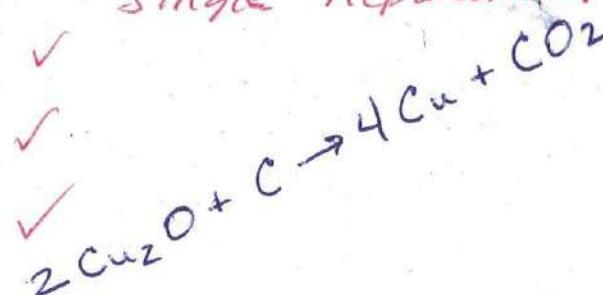

$$\begin{array}{c} \text{C} = 1 \\ \text{H} = 2 \\ \text{O} = 3 \end{array} \left| \begin{array}{c} 3 \\ 8 \\ 10 \end{array} \right. \checkmark$$

(Combustion)

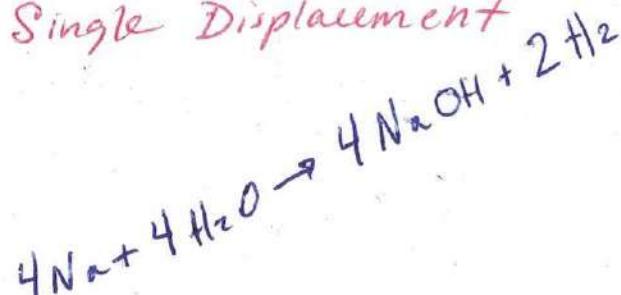

$$\begin{array}{c} \text{Cu} = 2 \\ \text{O} = 1 \\ \text{C} = 1 \end{array} \left| \begin{array}{c} 4 \\ 2 \\ 1 \end{array} \right.$$

$$\begin{array}{c} \text{Cu} = 1 \\ \text{O} = 2 \\ \text{C} = 1 \end{array} \left| \begin{array}{c} 2 \\ 2 \\ 1 \end{array} \right. \checkmark$$

$$\begin{array}{c} \text{Na} = 1 \\ \text{H} = 2 \\ \text{O} = 1 \end{array} \left| \begin{array}{c} 4 \\ 8 \\ 4 \end{array} \right.$$

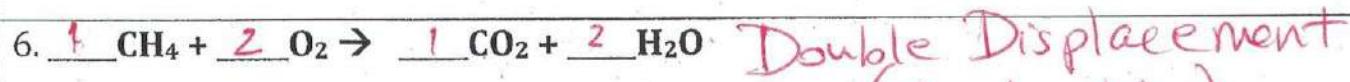

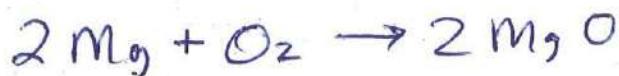

$$\begin{array}{c} \text{Na} = 1 \\ \text{H} = 3 \\ \text{O} = 1 \end{array} \left| \begin{array}{c} 4 \\ 8 \\ 4 \end{array} \right. \checkmark$$

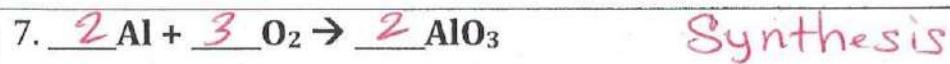

$$\begin{array}{c} \text{Mg} = 1 \\ | \\ 0 = 2 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 2 \end{array} \right.$$

$$\begin{array}{c} \text{Mg} = 1 \\ | \\ 0 = 1 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 2 \end{array} \right. \quad \text{Synthesis}$$

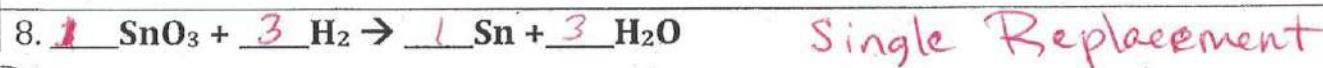

$$\begin{array}{c} \text{C} = 1 \\ | \\ \text{H} = 4 \\ | \\ 0 = 2 \end{array} \quad \left| \begin{array}{c} 1 \\ | \\ 2 \\ | \\ 4 \end{array} \right.$$

$$\begin{array}{c} \text{C} = 1 \\ | \\ \text{H} = 2 \\ | \\ 0 = 3 \end{array} \quad \left| \begin{array}{c} 1 \\ | \\ 4 \\ | \\ 4 \end{array} \right.$$

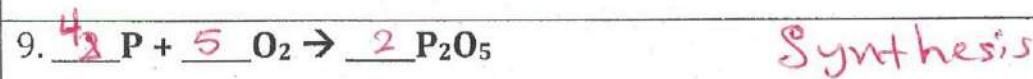

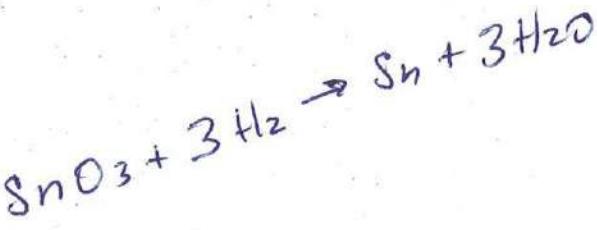

$$\begin{array}{c} \text{Al} = 1 \\ | \\ 0 = 2 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 6 \end{array} \right.$$

$$\begin{array}{c} \text{Al} = 1 \\ | \\ 0 = 3 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 6 \end{array} \right.$$

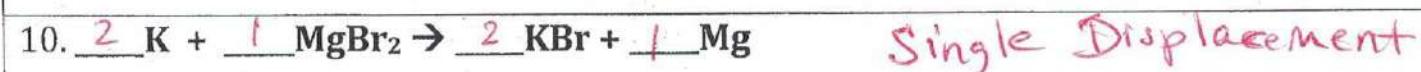

$$\begin{array}{c} \text{Sn} = 1 \\ | \\ 0 = 3 \\ | \\ \text{H} = 2 \end{array} \quad \left| \begin{array}{c} 1 \\ | \\ 3 \\ | \\ 6 \end{array} \right.$$

$$\begin{array}{c} \text{Sn} = 1 \\ | \\ 0 = 1 \\ | \\ \text{H} = 2 \end{array} \quad \left| \begin{array}{c} 1 \\ | \\ 3 \\ | \\ 6 \end{array} \right.$$

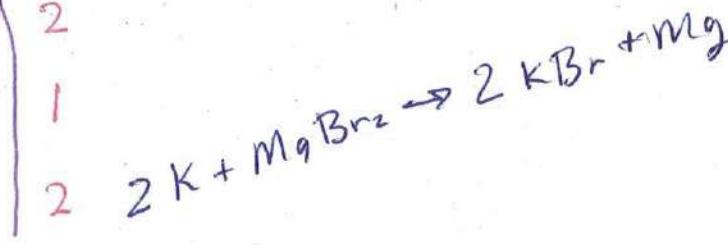

$$\begin{array}{c} \text{P} = 1 \\ | \\ 0 = 2 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 4 \\ | \\ 10 \end{array} \right.$$

$$\begin{array}{c} \text{P} = 2 \\ | \\ 0 = 5 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 4 \\ | \\ 10 \end{array} \right.$$

$$\begin{array}{c} \text{K} = 1 \\ | \\ \text{Mg} = 1 \\ | \\ \text{Br} = 2 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 1 \\ | \\ 2 \end{array} \right.$$

$$\begin{array}{c} \text{K} = 1 \\ | \\ \text{Mg} = 1 \\ | \\ \text{Br} = 1 \end{array} \quad \left| \begin{array}{c} 2 \\ | \\ 1 \\ | \\ 2 \end{array} \right.$$

Balancing Equations

Directions: Balance the following equations. You must show all your work.
