ADDENDUM NO. 1 - TO
SPECIFICATIONS AND CONTRACT DOCUMENTS
ENVIRONMENTAL LEARNING CENTER
OUTDOOR LEARNING AREA
JACKSON PUBLIC SCHOOL DISTRICT
JACKSON, MISSISSIPPI

JUNE 4, 2024

This addendum forms a part of the Contract Documents and modifies the original specifications and drawings, dated 5-9-24 as noted below. Acknowledge receipt of this Addendum in the space provided on the Bid Form. Failure to do so may subject Bidder to disqualification.

This Addendum consists of 1 page and 54 attachments.

Item No. 1: PRE-BID MEETING MINUTES AND SIGN-IN SHEET: See attached Pre-Bid Meeting Minutes and Sign In Sheet, consisting of 2 pages and dated May 24, 2024.

Item No. 2: CLARIFICATION: Soils to be removed may be dumped on site at a location designed by the owner. The contractor shall be responsible for spreading material maintaining and restoring haul route, and stabilization upon completion and any erosion control measures to keep silt for leaving the immediate stockpile area.

Item No. 3: SPECIFICATIONS, SECTION 00004 – LIST OF DRAWINGS: Remove and destroy this section and insert the attached revised Section 00004 – LIST OF DRAWINGS, consisting of 2 pages and marked “Revised 6-4-24” in lower left corner.

Item No. 4: SPECIFICATIONS, SECTION 00030 – INFORMATION AVAILABLE TO BIDDERS: Insert attached ASBESTOS INSPECTION AND LEAD CONTAINING PAINT SAMPLING REPORT, prepared by Terracon, dated August 11, 2023, and consisting of 45 pages.

Item No. 5: DRAWINGS, SHEET M1.1 – GENERAL NOTES, LEGEND, SCHEDULES, AND HVAC PLAN: Remove and destroy this sheet and insert the attached revised Sheet M1.1 – GENERAL NOTES, LEGEND, SCHEDULES, AND HVAC PLAN dated 6-4-24.

Item No. 6: DRAWINGS, SHEET P1.2 – ABOVE AND BELOW SLAB PLAN VIEW – PLUMBING: Remove and destroy this sheet and insert the attached revised Sheet P1.2 – ABOVE AND BELOW SLAB PLAN VIEW – PLUMBING dated 6-4-24.

Item No. 7: DRAWINGS, SHEET E0.1 – SPECIFICATIONS, LEGENDS, LIGHT FIXTURE SCHEDULE, PANEL SCHEDULE AND ALT #1: Remove and destroy this sheet and insert the attached revised Sheet E0.1 – SPECIFICATIONS, LEGENDS, LIGHT FIXTURE SCHEDULE, PANEL SCHEDULE AND ALT #1 dated 6-4-24.

Item No. 8: DRAWINGS, SHEET E1.1 – SITE POWER PLAN: Remove and destroy this sheet and insert the attached revised Sheet E1.1 – SITE POWER PLAN dated 6-4-24.

Item No. 9: DRAWINGS, SHEET E3.1 – POWER PLAN: Remove and destroy this sheet and insert the attached revised Sheet E3.1 – POWER PLAN dated 6-4-24.

ALLEN & HOSHALL, PLLC
1675 Lakeland Drive Suite 207
Jackson, Mississippi 39216

JOB NO. 63367

Meeting Minutes – Pre-Bid Meeting

Project: **Environmental Learning Center Outdoor Learning Area**
Date: **May 24, 2024**
Time: **10:00 am**
Location: **Environmental Learning Center**

I. **Player Introductions** – See Attached Sign-In Sheet
- Charles Bunniran – A&H Project Manager
- Michel Lebel – A&H Project Architect
- Lena Franklin - JPS
- Coach Gibson - Principal

II. **Bid Dates and Instructions to Bidders**
- Bid Date is June 11, 2024 at 10:00 am. Bids will be received at the JPS Business Office at 662 South President Street Jackson, MS until 9:00 am. All hand delivery proposals delivered between 9:00 a.m. until 9:59 a.m. (local prevailing time) the date the bid is scheduled to open, must be delivered to JPSD Board Room, 621 South State Street, Jackson, MS 39201. Contractors will not be allowed to sit in on the bid opening.
- Bids will also be received electronically via the planroom.
- Last day for questions is June 6, 2024 at 12:00 PM.
- Questions to be email to Charles at cbunniran@allenhoshall.com and we will answer questions via addendum.

III. **Bid Form**
- Pay close attention to proposal form for the allowances to be included in the bid as well as alternates.

IV. **Project Description**
- Project consists of an outdoor learning area, renovate existing restroom.
- Selected contractor/subcontractors will have sign an affidavit that all employees have passed background checks.

V. **Coordination**
- Substantial Completion date is 150 calendar days from NTP.
- There should be no interaction with students.
- After hours work or weekend work will have to coordinate with the school and Coach Gibson, minimum of 3 days prior.

VI. **Questions/Walk Thru**
- Contractor is responsible for temporary fencing.
- At a minimum sod shall be used in the bottom of drainage swales and slopes 3:1 or greater. All other areas could be seeded and mulched.
- Contractor is responsible for all testing.
- Asbestos and LBP report to be included in addendum.

RE: Asbestos Inspection and Lead-Containing Paint Sampling Report
JPS Lazy U Facility
Main Building and Quonset Hut
6190 Highway 18
Jackson, Mississippi
Terracon Project No. EB237108

Dear Mr. Bunniran:

The purpose of this report is to present the results of the asbestos inspection and lead-containing paint sampling performed on July 11, 2023 at the above-referenced buildings located in Jackson, Mississippi. These services were conducted in general accordance with our proposal number PEB237108, dated June 14, 2023. We understand that the inspection and sampling were requested by the client to aid in a planned renovation of the two buildings.

One asbestos-containing material was identified in the various materials associated with the Main Building. **Lead was also identified in three of painted surfaces** associated with the buildings. Please refer to the attached report for details.

Terracon appreciates the opportunity to provide this service. If you have any questions regarding this report, please contact the undersigned at (769) 233-2072.

Sincerely,
Terracon Consultants, Inc.

Brad McKnight
Project Industrial Hygienist

Alicia Coley, CIH
Authorized Project Reviewer

Table of Contents

Appendices

1.0 INTRODUCTION

Terracon Consultants, Inc. (Terracon) conducted an asbestos inspection and lead-containing paint sampling of the JPS Lazy U Facility located at 6190 Highway 18 in Jackson, Mississippi. The inspection and sampling were conducted on July 11, 2023 by Terracon representative, Mr. Brad McKnight. The scope of work included an inspection of accessible areas of the interior and exterior of the two buildings and in accordance with Terracon's proposal number PEB237108, dated June 14, 2023.

1.1 Project Objective

The scope of services included an inspection for asbestos-containing materials (ACM) as required by United States Environmental Protection Agency (USEPA) regulation 40 CFR 61, Subpart M, National Emission Standards for Hazardous Air Pollutants (NESHAP), which prohibits the release of asbestos fibers to the atmosphere during renovation or demolition activities. The asbestos NESHAP and Mississippi Admin, Code Part 2, Chapter 1, Rule 1.8 requires that potentially regulated asbestos-containing building materials (ACBM) be identified, classified, and quantified prior to planned disturbances or demolition/renovation activities.

The Occupational Health and Safety Administration (OSHA) has promulgated a worker protection standard for the disturbance of lead-containing paints during renovation and demolition projects. The lead paint sampling was performed to meet informational needs to comply with the OSHA Lead in Construction Standard (29 CRF 1926.62). Currently, proposed renovations or demolition activities which may impact lead paint is subject to OSHA regulation 29 CFR 1926.62 – Lead Exposure in Construction.

2.0 BUILDING DESCRIPTION

The JPS Lazy U Facility is located at 6190 Highway 18 in Jackson, Mississippi. The building inspected is two buildings that have been connected, the Main Building and the Quonset Hut. The Main Building is an approximate 2,700 square foot wood-framed structure with a pitched shingled roof. The exterior has cementitious asbestos siding and wood-framed windows. The interior consists of vinyl tile flooring throughout, gypsum wallboard walls, and a gypsum wallboard ceilings with texture. The Quonset Hut is a metal-framed, dome-shaped structure consisting of approximately 3,000 square feet. The exterior is metal with metal-framed windows. The interior is metal with spray applied insulation on the walls and ceiling. The space has an exposed concrete floor with a small section of vinyl floor tile and mastic. The mastic remains throughout the remainder of the floor.

3.0 ASBESTOS INSPECTION

3.1 Field Activities

The asbestos inspection was conducted by MDEQ accredited asbestos inspector Brad McKnight (Accreditation No. ABI-00001685). A copy of the asbestos inspector certificate is attached in Appendix G. A summary of inspection activities is provided below.

Visual Assessment

Our inspection activities began with visual observation of areas of the buildings to identify homogeneous areas of suspect ACM. A homogeneous area consists of building materials that appear similar throughout in terms of color and texture with consideration given to the date of application. The assessment was conducted throughout visually accessible areas of the interior and exterior. Building materials identified as concrete, glass, wood, masonry, metal, or rubber were not considered suspect ACM.

Physical Assessment

A physical assessment of each homogeneous area of suspect ACM was conducted to assess the friability and condition of the materials. A friable material is defined by the EPA as a material which can be crumbled, pulverized, or reduced to powder by hand pressure when dry. Friability was assessed by physically touching suspect materials.

Sample Collection

Based on results of the visual observation, bulk samples of suspect ACM were collected in general accordance with EPA sampling protocols. Random samples of suspect materials were collected in each homogeneous area. The inspector collected bulk samples using wet methods as applicable to reduce the potential for fiber release. Samples were placed in sealable containers and labeled with unique sample numbers using an indelible marker.

Thirty-nine bulk samples were collected from twelve homogeneous areas of suspect ACM from the two buildings. A summary of suspected ACM materials collected during the inspection is included as Appendix A, Table 2.

Sample Analysis

Bulk samples were submitted under chain of custody to QuanTEM Laboratories (QuanTEM) in Oklahoma City, Oklahoma for analysis by polarized light microscopy (PLM) with dispersion staining techniques per EPA methodology (EPA/600/R-93/116). The percentage of asbestos, where applicable, was determined by microscopic visual estimation.

3.2 Regulatory Overview – Asbestos

The asbestos NESHAP (40 CFR Part 61, Subpart M) regulates asbestos fiber emissions and asbestos waste disposal practices. The asbestos NESHAP regulation also requires the identification and classification of existing ACM according to friability prior to demolition or renovation activity. Under NESHAP, ACM is identified as either friable, Category I non-friable or Category II non-friable ACM. Friable ACM is a material containing more than 1% asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. All friable ACM is considered regulated asbestos containing material (RACM).

RACM includes all friable ACM, along with Category I and Category II non-friable ACM that has become friable, will be or has been subjected to sanding, grinding, cutting, or abrading, or ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder in the course of renovation or demolition activity.

Category I non-friable ACM are exclusively asbestos-containing packings, gaskets, resilient floor coverings, resilient floor covering mastics and asphalt roofing products that contain more than 1% asbestos. Category II non-friable ACM are all other non-friable materials other than Category I non-friable ACM that contain more than 1% asbestos. Category II non-friable ACM generally includes but is not limited to cementitious material such as: cement pipes, cement siding, cement panels, glazing, mortar and grouts.

In non-state, non-school buildings, the State of Mississippi sets forth standards for asbestos under 11 Mississippi Administrative Code Part 2, Chapter 1, Rule 1.8. Per Part 2, Chapter 10, Rule 10.1 to 11 standards, the following activities, when conducted, must be performed by accredited individuals: asbestos inspections, asbestos abatement, and monitoring for airborne asbestos.

The United States OSHA asbestos standard for construction (29 CFR 1926.1101) regulates workplace exposure to asbestos. The OSHA standard requires that employee exposure to airborne asbestos must not exceed 0.1 fibers per cubic centimeter of air (0.1 f/cc) as an eight-hour time weighted average (TWA) and not exceed 1.0 fibers per cubic centimeter of air (1.0 f/cc) over a 30-minute time period known as an excursion limit (EL). The TWA and EL are known as OSHA's asbestos permissible exposure limits (PELs). The OSHA standard classifies construction and maintenance activities which could disturb ACM and specifies work practices and precautions which employers must follow when engaging in each class of regulated work.

3.3 Findings and Recommendations - Asbestos

Based on the analytical results of the samples submitted for analysis, one type of material was determined to contain greater than 1% asbestos. This material was:

- HA-02: White Cementitious Siding (Transite) – Main Building Exterior Walls

A summary of the ACM and analytical results can be found in Appendix A of this report. The sample locations and floor plans can be found in Appendix F.

It should be noted that suspect materials, other than those identified during this inspection may exist within the two buildings. Should suspect materials other than those which were identified during this inspection be uncovered during the renovation process, those materials should be assumed asbestos-containing until sampling and analysis can confirm or deny their asbestos content.

4.0 LEAD PAINT SAMPLING

4.1 Field Activities

Brad McKnight of Terracon conducted the lead paint sampling activities. The scope of the sampling included obtaining bulk paint chips samples from the various colored painted components of the interior and exterior of the buildings. A summary of the limited sampling activities is provided below.

Visual Assessment

The lead paint sampling began by visually surveying building components and identifying unique combinations of paint. A unique combination of paint consists of paint that is applied to a building material and has similar room equivalent, substrate, and component. The substrate is the material beneath the painted surface of the component. Substrates typically found are drywall, brick, concrete, wood, plaster, and metal. Paint that was applied to furniture or other movable objects was not included in the scope of this lead paint sampling. Multiple random test locations are chosen for laboratory analysis.

Sample Collection

Terracon collected twelve bulk paint chip samples from painted surfaces from various building components. A summary of paint chip samples collected during the sampling is included as Appendix C.

Sample Analysis

Bulk paint chips were submitted under chain of custody to QuanTEM in Oklahoma City, Oklahoma for analysis by EPA methodology (7000B - Flame AAS). The analytical results are presented in Appendix D of this report.

4.2 Regulatory Overview – Lead Paint

The OSHA *Lead Standard for Construction* (29 CFR 1926.62) applies to all construction work where an employee may be occupationally exposed to lead. All work related to construction, alteration, or repair (including painting and decorating) is included. The lead-in-construction standard applies to any detectable concentration of lead in paint, as even small concentrations of lead can result in unacceptable employee exposures depending upon on the method of removal and other workplace conditions.

Under the OSHA standard, construction includes, but is not limited to, the following:

- Demolition or salvage of structures where lead or materials containing lead are present
- Removal or encapsulation of materials containing lead
- New construction, alteration, repair, or renovation of structures, substrates, or portions containing lead, or materials containing lead
- Installation of products containing lead
- Lead contamination/emergency clean-up
- Transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed
- Maintenance operations associated with construction activities described above

OSHA regulation 29 CFR 1926.62 established an "Action Level" for lead concentrations "in air" of 30 micrograms per cubic meter of air (µg/m^3) and a "Permissible Exposure Limit" for lead concentrations "in air" of 50 µg/m^3. At this time, OSHA has not established limits for lead content in bulk paint (non-airborne). Their interpretation on this issue is that any amount of lead may cause airborne concentrations above the established limits.

4.3 Findings and Recommendations – Lead Paint

Based on the paint chip sample analytical results, LCP concentrations over the laboratory's Reporting Limit (RL) was identified in three of the painted materials sampled. A summary of the paint sample locations and analytical results can be found in Appendix D of this report.

The findings from this sampling indicate that lead-containing painted materials will be impacted during any future renovation or demolition process; therefore, the contractor must comply with the following regulatory requirements:

- If workers perform sanding, grinding, cutting, or any other dust-producing activities (demolition) on lead-containing materials, the employer must implement the requirements of the OSHA Lead in Construction Standard, 29 CFR 1926.62. This standard requires, among other things, lead training, personal protective equipment (e.g., respiratory protection, protective

clothing), an initial exposure assessment, and hygiene facilities for all potentially exposed workers.

- If lead dust-producing activities are to be conducted, care should be taken to minimize the spread of lead particulate beyond the immediate area of the work, and to avoid exposing other unprotected individuals in the area to airborne lead.

5.0 GENERAL COMMENTS

This limited asbestos inspection and lead-containing paint sampling were conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions in the same locale. The results, findings, conclusions, and recommendations expressed in this report are based on conditions observed during our inspection of the buildings. The information contained in this report is relevant to the date on which this inspection was performed and should not be relied upon to represent conditions at a later date. This report has been prepared on behalf of and exclusively for use by Allen & Hoshall Architects for the specific application to their project as discussed. This report is not a bidding document. Contractors or consultants reviewing this report must draw their own conclusions regarding further investigation or remediation deemed necessary. Terracon does not warrant the work of regulatory agencies, laboratories, or other third parties supplying information which may have been used in the preparation of this report. No warranty, express or implied is made.

APPENDIX G

CERTIFICATIONS

State of Mississippi

Department of Environmental Quality

Office of Pollution Control

Certificate of Licensure

In accordance with the Asbestos Abatement Accreditation and Certification Act,
Enacted as 1989 Mississippi Law, Chapter 505

Be it known that

Brad McKnight

Having submitted acceptable evidence of qualifications and
training and other appropriate information, is hereby granted this

Asbestos Inspector

Certification

Greg Mallery

Chief, Asbestos & Lead Branch

Certificate No.: ABI-00001685
Expiration Date: Jun 7th, 2024
Training Expires on Jun 7th, 2024

41468 LIC20230001

GENERAL NOTES/SPECIFICATIONS

1. ALL DUCT IN FINISHED ROOMS OR SPACES SHALL BE CONCEALED ABOVE SUSPENDED CEILING UNLESS OTHERWISE NOTED.
2. VERIFY LOCATION OF NEW EQUIPMENT AND APPURTENANCES.
3. COORDINATE THE HEATING, VENTILATION, AND AIR CONDITIONING WORK WITH THE WORK OF ALL OTHER TRADES INVOLVED WITH THIS PROJECT.
4. SEE ARCHITECTURAL CEILING PLAN FOR EXACT LOCATION OF CEILING AIR DEVICES, AIR DEVICE LOCATION ON MECHANICAL SHEETS ARE FOR QUANTITY AND REFERENCE.
5. ALL DUCT DIMENSIONS ARE SHEET METAL DIMENSIONS.
6. ALL SYSTEMS SHALL BE PROVIDED AND INSTALLED IN ACCORDANCE WITH THE 2018 INTERNATIONAL MECHANICAL CODE.
7. PROVIDE SUBMITTALS FOR ALL EQUIPMENT AND AIR DEVICES FOR APPROVAL.
8. COORDINATE DUCTWORK INSTALLATION WITH ALL OTHER TRADES.
9. THERMOSTATS SHALL BE MOUNTED AT 48" AFF.
10. BALANCE EACH NEW FAN AND AIR DEVICE FOR INDICATED AIRFLOW. PROVIDE A TABULATION OF THESE AIRFLOWS. TAB CONTRACTOR SHALL BE NEBB OR AABC CERTIFIED.
11. DUCTWORK AND RELATED SHEET METAL WORK:
    A. CLASSIFICATION: LOW PRESSURE DUCTWORK SHALL BE LIMITED TO SYSTEMS OPERATING AT STATIC PRESSURES OF TWO INCHES OF WATER OR LESS.
    B. MATERIALS: GALVANIZED SHEET WITH A COATING CLASS OF G90 CONFORMING TO ASTM A653. LIQUID DUCT SEALANT SHALL BE BRUSH OR FLOW GUN GRADE WHICH REMAINS FLEXIBLE AFTER AIR CURING, 3M TYPE 800 OR EQUAL.
    C. CONSTRUCTION: CONSTRUCT DUCTWORK WITH CAREFUL, NEAT, AND ACCURATE WORKMANSHIP AND AIRTIGHT/WATERTIGHT JOINTS AND SEAMS. CONSTRUCT DUCTWORK AND INSTALL IN ACCORDANCE WITH LATEST EDITION OF SMACNA (SHEET METAL AND AIR CONDITIONING CONTRACTORS NATIONAL ASSOCIATION, INC.) "HVAC DUCT CONSTRUCTION STANDARDS METAL AND FLEXIBLE", INCLUDING ALL APPLICABLE RECOMMENDATIONS OF THESE STANDARDS.
12. FLEXIBLE DUCTWORK SHALL BE EQUAL TO FLEXMASTER TYPE 1NI-C, UNINSULATED, CONNECTOR RATED. LENGTH OF FLEXIBLE DUCT SHALL NOT EXCEED 3 FEET.
13. INSULATE REFRIGERANT SUCTION LINES WITH ½" THICK AP ARMAFLEX OR EQUAL.

SPECIFICATIONS

GUARANTEE ALL MATERIALS AND WORKMANSHIP FOR ONE YEAR FROM DATE OF ACCEPTANCE.

COMPLY WITH THE NATIONAL ELECTRICAL CODE, STATE AND LOCAL CODES.

USE ONLY COPPER CONDUCTORS, AS NOTED. MINIMUM SIZE #12AWG. USE TYPE THWN, UOI. ALL CIRCUITS SHALL BE COLOR CODED.

USE MINIMUM 1/2 INCH CONDUIT. USE SO CORD FOR DROPS. USE EMT WHERE CONCEALED IN WALLS. USE IMC WHERE EXPOSED. USE RIGID PVC IN SLAB AND UNDERGROUND. PROVIDE PULL CORDS IN ALL EMPTY CONDUITS. COORDINATE WITH STRUCTURAL. USE CAST BOXES WHERE EXPOSED. USE APPROPRIATE ANCHORS FOR WEIGHTS INVOLVED. PAINT EXPOSED CONDUITS AND BOXES TO MATCH STRUCTURE.

ALL WORK SHALL BE COORDINATED WITH OWNERS REPRESENTATIVE. ARRANGE ALL ELECTRICAL WORK TO INTERFERE AS LITTLE AS POSSIBLE WITH OWNER'S NORMAL OPERATIONS. DO NOT INTERRUPT EXISTING ELECTRICAL SERVICE AT ANY TIME WITHOUT OWNERS PRIOR APPROVAL. AFTER AN ELECTRICAL SERVICE INTERRUPTION HAS BEEN MADE, MAKE ALL NECESSARY CONNECTIONS AND ALTERATIONS, AND RESTORE ELECTRICAL SERVICE AS QUICKLY AS POSSIBLE. AT NO EXTRA COST TO OWNER, PROVIDE TEMPORARY ELECTRICAL CONNECTIONS AND OTHER ELECTRICAL WORK AS REQUIRED TO MAINTAIN CONTINUITY OF ELECTRICAL SERVICE.

REMOVE ALL OWNER-SELECTED ELECTRICAL MATERIALS AND ELECTRICAL EQUIPMENT WITHOUT UNNECESSARY DAMAGE THERETO, AND SAFELY STORE THEM AT LOCATIONS DESIGNATED BY OWNER.

ELECTRICIAN IS RESPONSIBLE FOR ALL FINAL ELECTRICAL CONNECTIONS FOR OWNER PROVIDED EXTERIOR BUILDING SIGNS. SIGNS MUST BE CONNECTED WITHIN 48 HOURS OF INSTALLATION AND TESTED FOR NIGHT VIEWING. ADVISE OWNER IF THERE ARE ANY PROBLEMS WITH SIGN OPERATING PROPERLY.

BEFORE COMMENCING ELECTRICAL WORK FOR ELECTRICALLY OPERATED EQUIPMENT, ELECTRICAL SECTION SHALL: CHECK HORSEPOWER AND/OR ELECTRICAL RATING OF EACH INDIVIDUAL ELECTRICALLY OPERATED EQUIPMENT ITEMS, REGARDLESS OF WHO FURNISHES AND/OR INSTALLS THAT EQUIPMENT: AND ADJUST SIZES OF ALL APPLICABLE FEEDERS, CIRCUIT BREAKERS, SWITCHES, PROTECTIVE DEVICES, AND OTHER ELECTRICAL DEVICES FURNISHED BY ELECTRICAL SECTION, AS REQUIRED TO PROVIDE PROPER PROTECTION AND SATISFACTORY OPERATION OF THE ELECTRICALLY OPERATED EQUIPMENT ACTUALLY INSTALLED. THIS INCLUDES INCREASING TO THE NEXT LARGER SIZE, OR DECREASING TO NEXT SMALLER SIZE, ALL FEEDERS, CIRCUIT BREAKERS, SWITCHES, PROTECTIVE DEVICES, AND OTHER ELECTRICAL DEVICES INVOLVED, AS REQUIRED TO MATCH CAPACITIES OF CORRESPONDING ELECTRICALLY OPERATED EQUIPMENT ACTUALLY INSTALLED, EXCEPT THAT NO SIZES SHALL BE DECREASED WITHOUT APPROVAL.

ALL ELECTRICAL EQUIPMENT AND DEVICES SHALL BE UL LISTED, COMMERCIAL GRADE.

ALL DEVICES AND DEVICE PLATE COLORS SHALL BE BLACK AND BE MANUFACTURED BY BRYANT, HUBBELL, ARROWHART, LEVITON, SIERRA, EAGLE SPECIFICATION LINE OR G.E. ALL

CONTRACTOR SHALL INSPECT ALL EXISTING RATED WALLS AND PROVIDE SLEEVES FOR ALL PENETRATIONS. ALL PENETRATIONS SHALL BE SEALED AS REQUIRED.

USE BLACK DEVICE STANDARD COVERPLATES, UON. CONTRACTOR SHALL VERIFY COLOR REQUIREMENTS WITH OWNER'S REPRESENTATIVE.

SEE ARCHITECTURAL REFLECTED CEILING PLAN FOR EXACT LOCATION OF LIGHT FIXTURES.

CLEARLY TYPEWRITE ON EACH PANELBOARD DIRECTORY CARD THE DESIGNATIONS OF THE FIXTURES, OUTLETS, AND EQUIPMENT SERVED BY EACH DEVICE IN PANELBOARD. IDENTIFY EACH ENTIRE PANELBOARD. ASSEMBLY WITH A ONE INCH MINIMUM HEIGHT LAMINATED PLASTIC NAMEPLATE ENGRAVED WITH 1/2 INCH MINIMUM EIGHT CHARACTERS SHOWING PANELBOARD DESIGNATION, AND SECURELY ATTACHED TO THE INSIDE OF PANELBOARD DOOR OVER DIRECTORY CARD.

CONTRACTOR SHALL SUBMIT TO THE ARCHITECT A MATERIALS SUBMITTAL CONSISTING OF CUT SHEETS OF ALL PANELS, CONDUIT, WIRE, DEVICES, LIGHT FIXTURES AND EQUIPMENT.
