Bloomfield Sixth, Seventh and Eighth Graders,

Summer is nearly here, and we all deserve this much needed time off! Take time to really give yourself a break. Connect with family and friends and allow yourself to really explore your interests and hobbies.

Many of us forget things over the summer, it is understandable. Just 30 minutes a week could allow you to maintain a good level of math understanding, and more time could allow you to close a gap or get ahead. For this reason, the Mathematics Department would like to make you aware of a valuable resource that is regularly used in the middle school, [Aleks.com](https://www.aleks.com). Just sign in and practice, that is it!

Summer work is optional. Our goal is to supply a quality resource that you can use to avoid a loss in learning and bridge the potential gap from June to September.

After the challenges of this year, we all deserve an amazing summer.

Enjoy your time off,
Claire Keller

Goal 1: Prerequisite Knowledge (recommended)

Students should review and master prior content to ensure a solid foundation. If the only thing done in the summer is prerequisite knowledge, that is more than enough!

Goal 2: Ready to Move on (optional)

Students will reinforce any additional foundational skills and also explore or learn a few new concepts.

By the start of the school year, if you have not, move into your actual course. This course will serve as a tool to use throughout the year.

September 2020 Grade Level	Khan Academy Summer Links
7	Get ready for 7th grade Math
8	Get ready for 8th grade Math
Algebra 1	Get ready for Algebra I Math
Geometry	Get ready for Geometry Math
