

Canon Camera Simulator, exercise 1 and reflection.

Name:

What: Canon Camera Simulator

Why: Improve your understanding of basic camera controls, and communicate that understanding like an expert.

How: Log on to the Canon camera simulator and change the settings to achieve the desired results. Take notes on what you do because you will write a reflection on it.

Create a correctly exposed photo and use the controls to take the 4 photos listed below.

After you take the photo, review the settings you used and read the tips.

Make and save a screenshot of each of your 4 photos, with the settings you used. Do this with the computer snipping tool, save the screenshot to your desktop, and post it here on Google Classroom.

1. Make the background of the photo blurry
2. Make everything in focus.
3. Blur the propeller's motion.
4. Freeze the propeller's motion.

After doing the Canon Camera Simulator experiments, write to reflect on your learning:

1. What camera setting do you change to make the background blurry?
2. What exactly was that setting?
3. What setting do you change to make everything in focus?
4. What setting did you choose?
5. What setting do you change to blur the motion?
6. What setting did you choose?
7. What setting do you change to freeze the motion?
8. What setting did you choose?
9. What other setting did you have to change and why?
10. Complete the following sentence for photo 1:

I used the setting of _____ because I wanted to make _____ appear _____ for _____.
