Collages

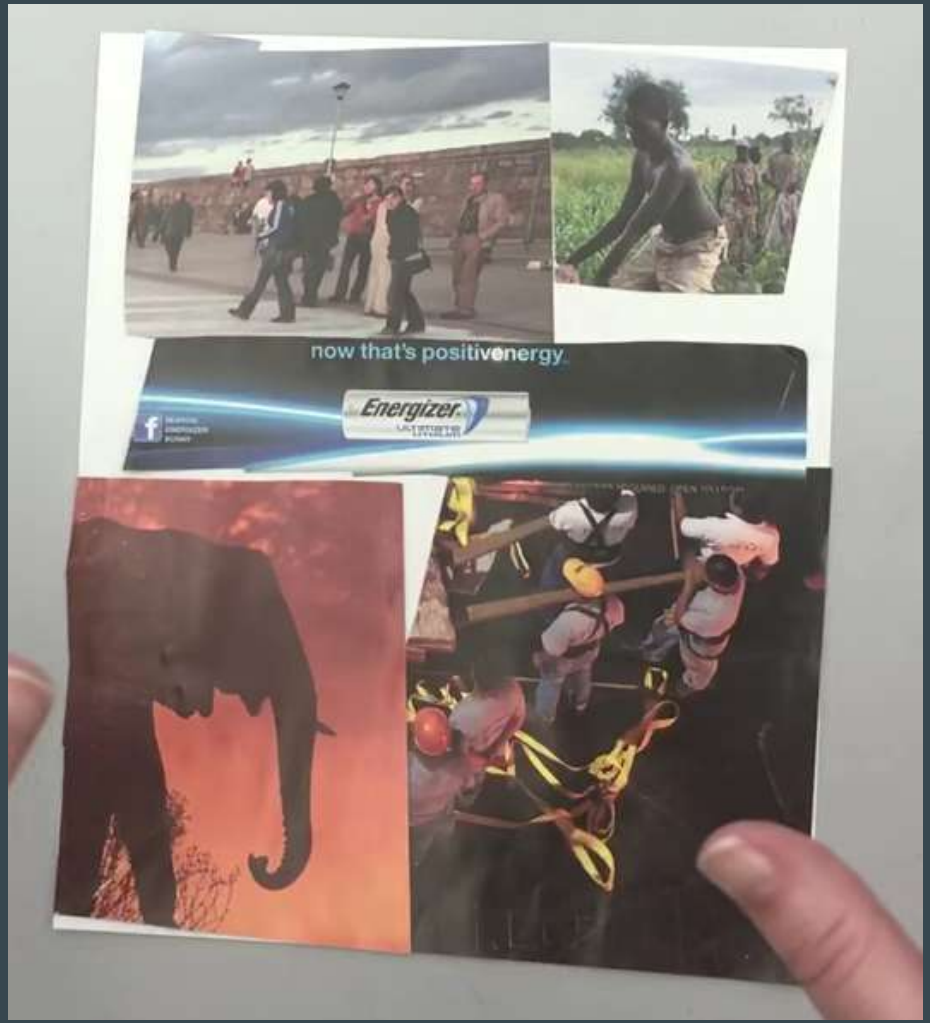
What to do and what to avoid

TERRIBLE!

-big boxy squares

-no background

-no interaction



SLIGHTLY BETTER

-cutting is a little better

-but still random

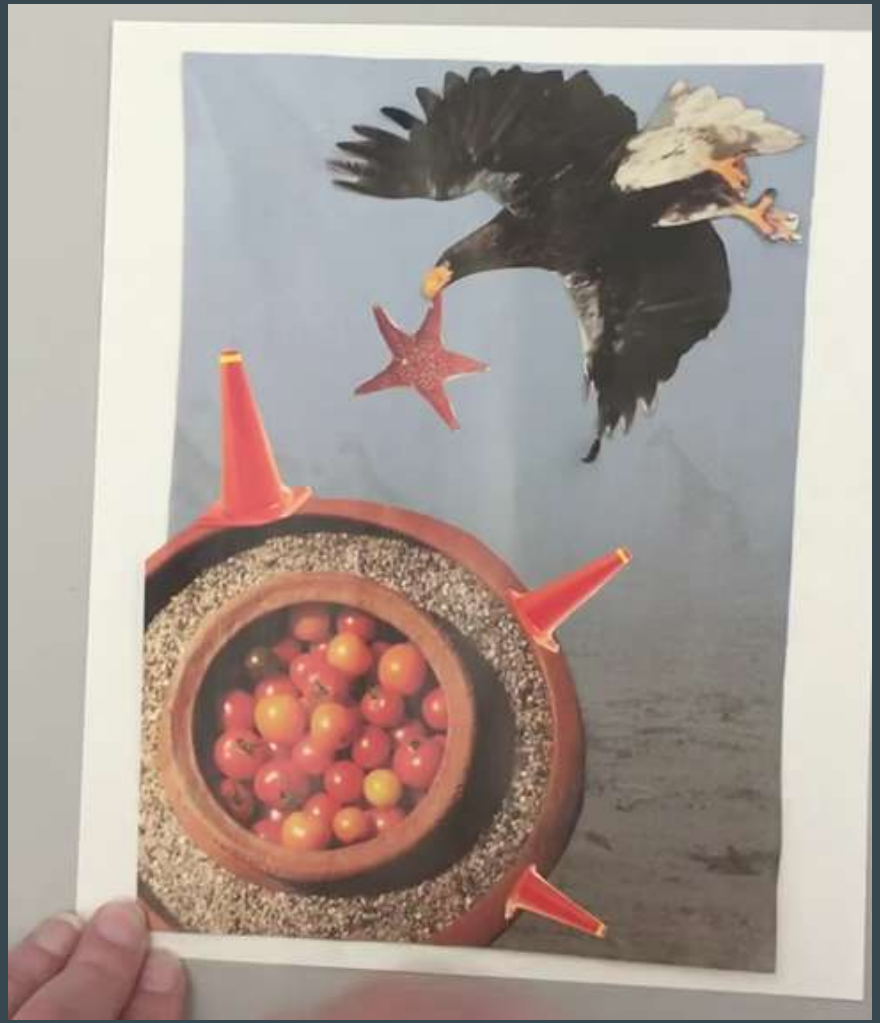
-still no background

MUCH BETTER

-carefully cut out

-interaction

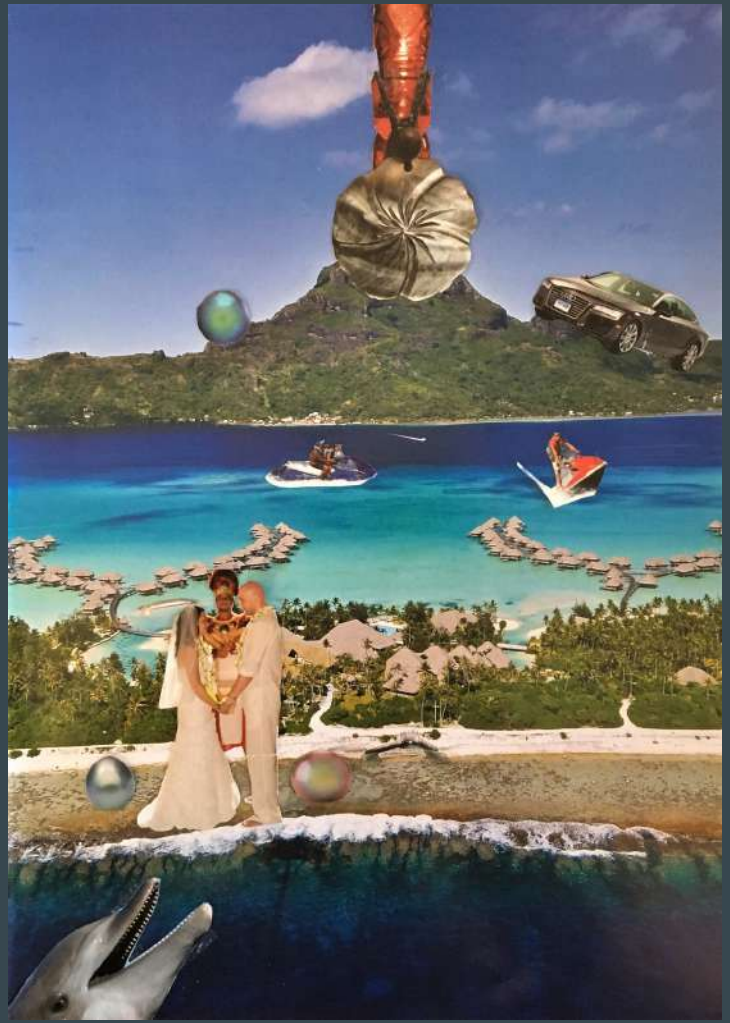
1) Directional
2) Between elements

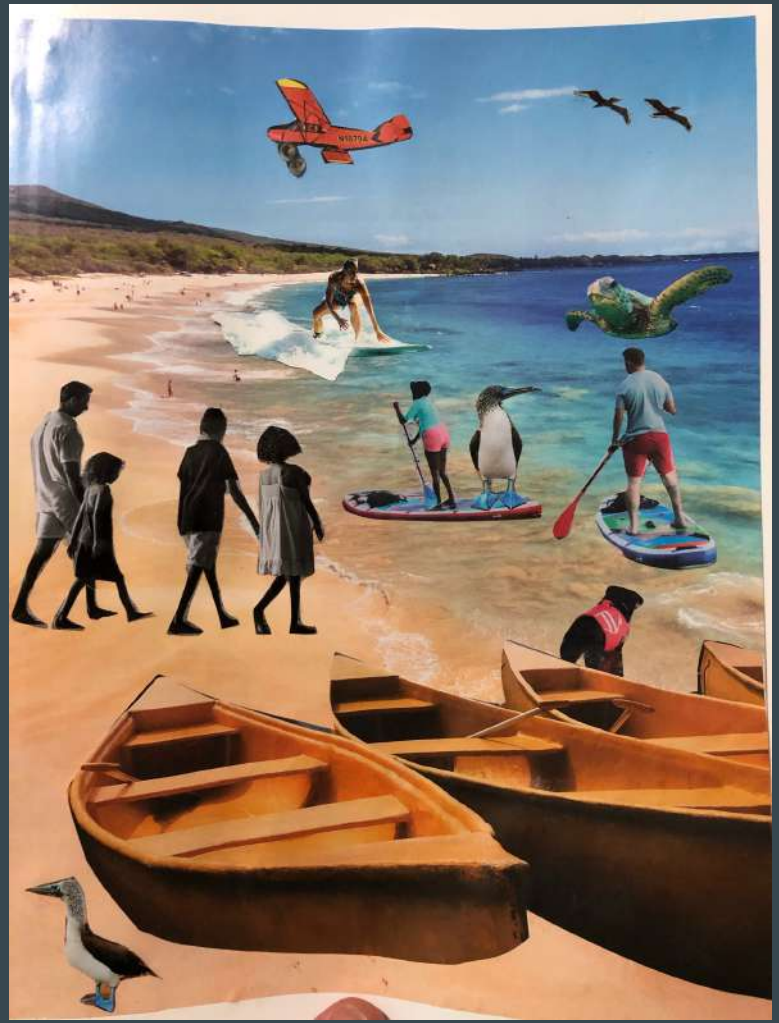


Even better

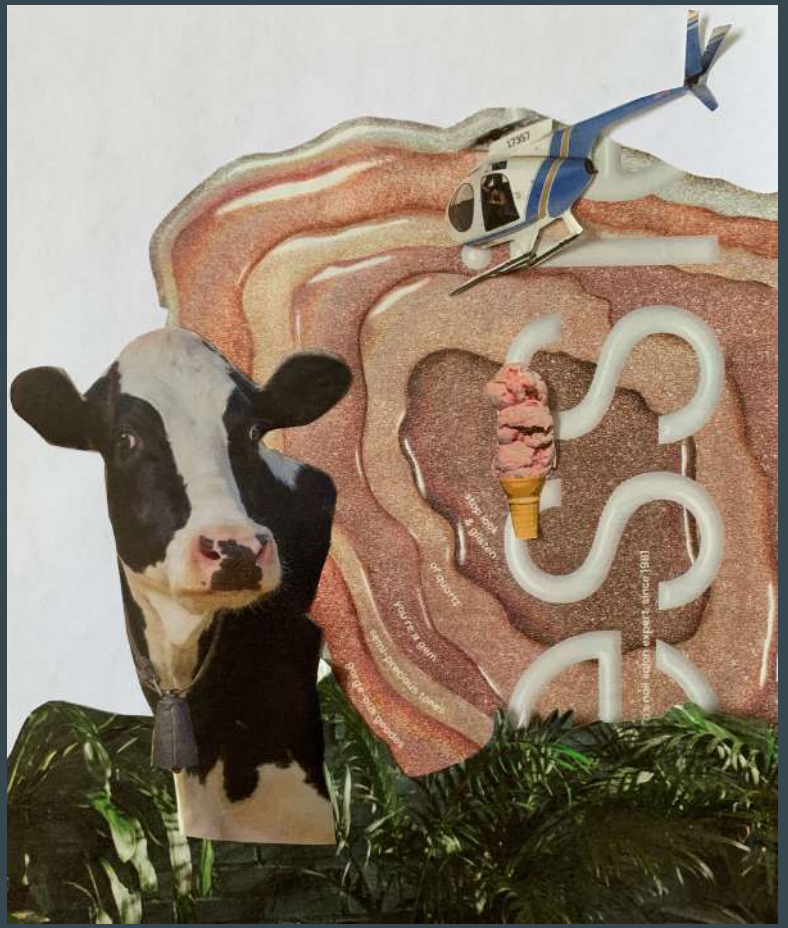
-works spatially, things stand/rest on parts of the background

-tells a story, not just random





What is wrong with these?



Best Practices

1) Cut carefully
2) Start with background
3) Have objects interacting with the background
4) Have objects interact with each other
5) Don’t have objects floating in space for no reason
6) Have a background and at least 4 other things
