

# Critters from AutoShapes

Using AutoShapes and Line tools, create recognizable “critters.”

- Use the Control Key when you draw a circle or a square, instead of an Oval or Rectangle.
- Use the line tool to create a tear drop shapes and lines
- use edit points as necessary to smooth the shape.
- Copy, paste, and resize each of the shapes to form a small, medium and large size.
- Use Order to send shapes to the back, bring forward, etc. to create a feeling of 3D
- Use the rotate tools to turn the shapes, resize the shapes
- add fill color, alter the line color, change thickness, etc. as needed.

When a critter is finished, use the select objects to select the entire design then group it.
