

Day 13: Camera Angle Exercise

[View this presentation first.](#)

Goal: Show an object from different viewpoints.

1. Find an object of interest.
2. Pick a location for your photo shoot with good lighting and with little distractions.
3. Start shooting and pay attention to where your camera is focusing. Fill your frame and get close to your subject. Your goal is to get every side of the object you chose.
4. Shoot at least 6 different angles, but try to get all of them!
5. When you edit your images, put all of them into a collage first and then edit the whole thing together, so the images are consistently edited.
6. Turn in a collage of 6-9 shots.
