

Seeing From All Angles

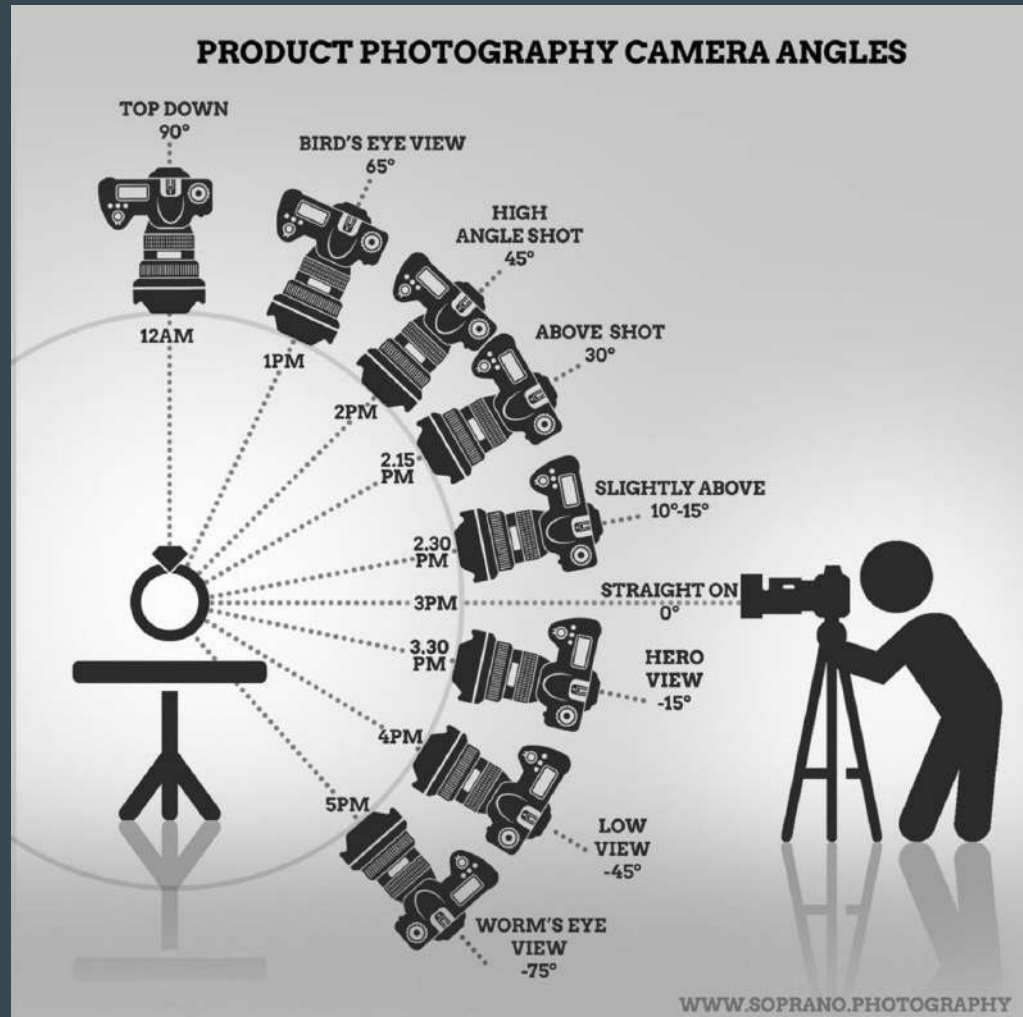

...

You have never looked at something so closely before!

Shot Angles

There are so many different angles you can shoot a subject from.

Please check out the terms of camera angles in the diagram.

Student Example

Notice how the student really moved all around the subject. Shot it from above, the side, looking down and some great detail shots.

Student Example

The most random object
can be photographed and
made into art!

Also notice how the
student edited their images
to match the style of the
bell. Rusty, warm and aged.

They also cropped in
interesting ways!

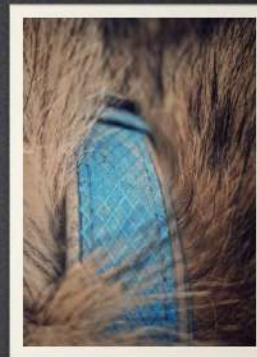

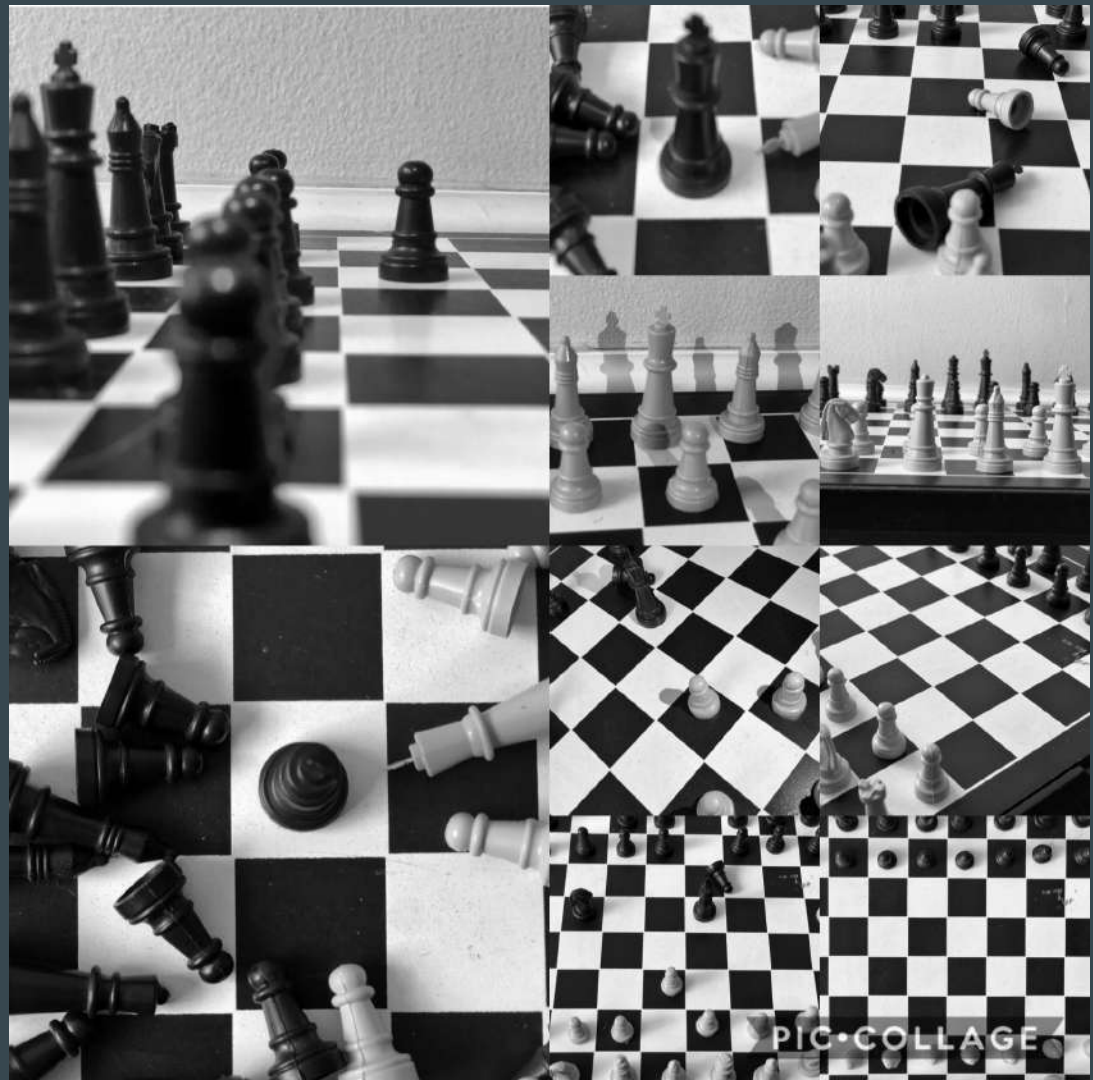

Student Example

If you can get your dog to stay still, then try getting a bunch of different angles of it.

When you shoot from a variety of angles and shoot tight you can almost make this look like a puzzle.

Amazing example of how fun of a collage you can make when you shoot from angles and your subject has a strong pattern.

Assignment

Find an object of interest.

Pick a location for your photo shoot with good lighting and with little distractions.

Start shooting and pay attention to where your camera is focusing. Fill your frame and get close to your subject. Your goal is to get every side of the object you chose.

Shoot at least 6 different angles, but try to get all of them!

When you edit your images, put all of them into a collage first and then edit the whole thing together, so the images are consistently edited.

Turn in a collage of 6-9 shots.
