

# DIGITAL SELFIES IN ADOBE DRAW

## 1. FIND A PHOTO

- MOST IMPORTANT: Have light, medium, and dark areas in the face.
- Have emotion, props, action, story, or something to make the face interesting.

## 2. CROPPING

- Crop out unwanted parts. You want mostly the face with maybe a bit more.
- You can see that I've cropped out my cheese-ball friend...because I am soooo pretty! 😊

# GET PAINTING!

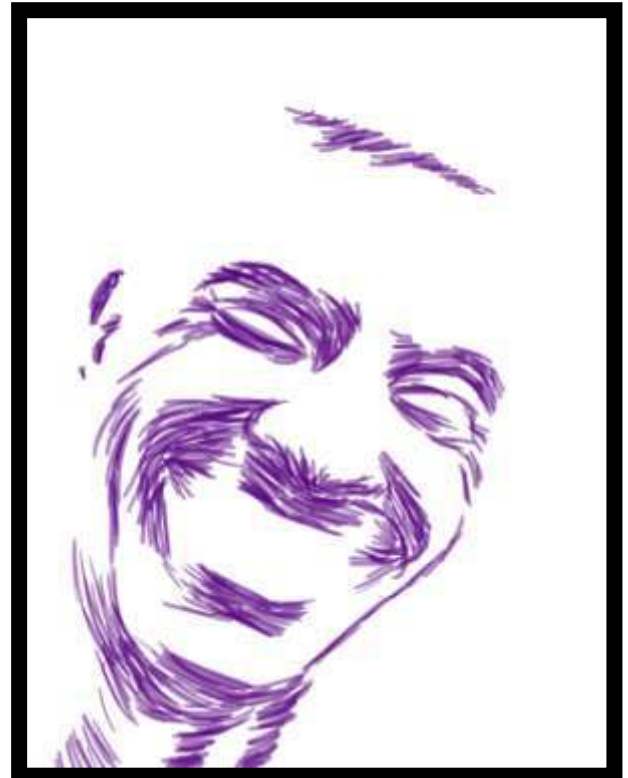

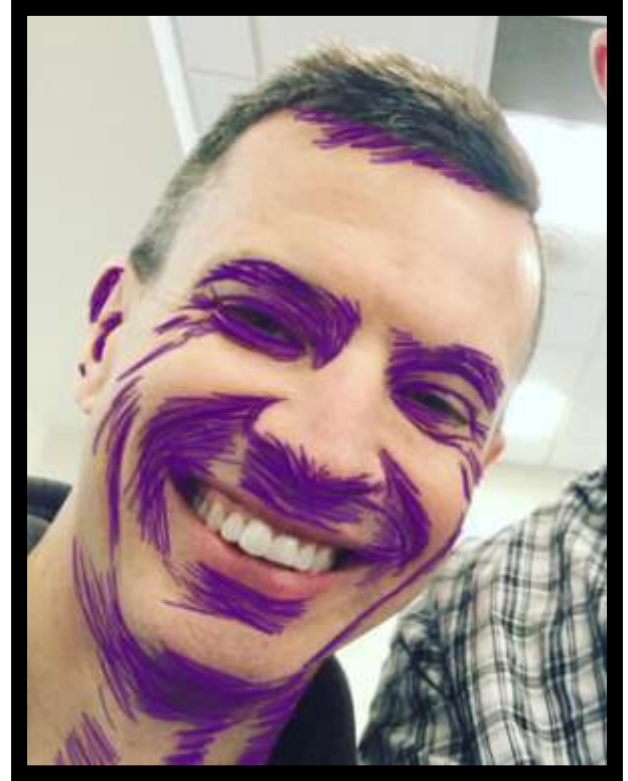

- Watch the video to set up Adobe Draw.
- You NEED dark, light, and medium layers!
- Try to think of areas of your face as either dark, light, or medium.
- DON'T outline, or just color in shapes, like your nose!

## 1. PAINT YOUR DARKS

- Paint dark AREAS with your dark color, on your dark layer.
- DON'T color areas solid.
- DO color a bit behind hair and eyebrows.

**TURN IN ON GOOGLE CLASSROOM BEFORE GOING FURTHER!**

**I'll probably return it a few times before it's right. That's why this step is worth more points.**

## 2. PAINT YOUR LIGHTS

- Turn off your DARK LAYER.
- Paint ON your LIGHT LAYER
- Paint all of your lightest areas, leave the medium areas alone.
- Just like your Dark Layer, DON'T paint things in solid.

**TURN IN ON GOOGLE CLASSROOM BEFORE GOING FURTHER!**

### 3. PAINT YOUR MEDIUMS

- This step is MUCH EASIER. Your mediums should be everything you have left of your face, minus details, hair, and clothing.
- Paint on your MEDIUM LAYER.
- **Paint BEHIND your Dark and Light Layers.**
- Still, don't go totally solid.

**TURN IN BEFORE GOING FURTHER!**

### DARKS AND LIGHTS

**DARKS and LIGHTS  
With MEDIUM  
in the back.**
