

Draft Science Standards Crosswalk

Science Crosswalk

Purpose of this crosswalk

This crosswalk is a draft showing alignment between the science standards in the Next Generation Science Standards (NGSS) and the proposed Washington (WA) State K–12 Learning Standards for Science. This crosswalk can be used to understand how the NGSS were updated, revised, and reorganized.

The WA State K–12 Learning Standards for Science have not yet been formally adopted. This crosswalk is a draft only.

Crosswalk Key

NGSS (2013)	WA Science (2024)
Code and Title of standard in the Next Generation Science Standards (2013.)	Text of Essential Questions for the standard or group of standards in the next row.
Text of standard in the NGSS.	New Priority Standard text is listed above the supporting standards in the same row. Text of standards in the draft WA State Learning Standards for Science (2024).
Addition of Environmental and Sustainability Education	Text of draft ESE standards.

Note: Performance Expectations moved between DCI and Priority Arrangement have been marked with an asterisk (*); all NGSS Performance Expectations are included.

Kindergarten

NGSS (2013)	WA Science (2024)
K-PS2 Motion and Stability: Forces and Interactions	What happens if you push or pull an object in different ways?
K-PS2-1 Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object. K-PS2-2 Analyze data to determine if a design solution works as intended to change the speed or direction of an object with a push or a pull.	Priority: WA.K.PS2 Use evidence, data, and investigation to show and compare how pushes and pulls affect the motion of objects; apply learned understandings to design and test ways to intentionally control the motion of objects. K-PS2-1 Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object. K-PS2-2 Analyze data to determine if a design solution works as intended to change the speed or direction of an object with a push or a pull. [Engineering]
K-PS3 Energy	How does sunlight affect the temperature of things on the Earth? How can we change that?
K-PS3-1 Make observations to determine the effect of sunlight on Earth's surface. K-PS3-2 Use tools and materials to design and build a structure that will reduce the warming effect of sunlight on an area.	Priority: WA.K.PS3 Use evidence and investigation to show how sunlight affects temperature of surfaces; use learned understandings to design and build a structure that can decrease the temperature of a surface heated by the sun. K-PS3-1 Make observations to determine the effect of sunlight on Earth's surface. K-PS3-2 Use tools and materials to design and build a structure that will reduce the warming effect of sunlight on an area. [Climate] [Engineering] [ESE]
K-LS1 From Molecules to Organisms Structures and Processes	What do plants and animals need to survive and how do they get it?

NGSS (2013)	WA Science (2024)
K-LS1-1 Use observations to describe patterns of what plants and animals (including humans) need to survive.	Priority: WA K.LS1 Use evidence and modeling to show and explain what living things need to survive and how they get it from the places they live. K-LS1-1 Use observations to describe patterns of what plants and animals (including humans) need to survive. [ESE] K-ESS2-2 Construct an argument supported by evidence for how plants and animals (including humans) can change the environment to meet their needs. [ESE] K-ESS3-1 Use a model to represent the relationship between the needs of different plants or animals (including humans) and the places they live. [Climate] [ESE]
K-ESS2 Earth's Systems	What patterns can we see in our weather and how can we use those patterns to be safe?
K-ESS2-1 Use and share observations of local weather conditions to describe patterns over time. K-ESS2-2 Construct an argument supported by evidence for how plants and animals (including humans) can change the environment to meet their needs.*	Priority: WA K.ESS2 Use evidence and data to show and explain patterns in local weather and how humans use those patterns to plan ahead and design for safety. K-ESS2-1 Use and share observations of local weather conditions to describe patterns over time. [Climate] K-ESS3-2 Ask questions to obtain information about the purpose of weather forecasting to prepare for, and respond to, severe weather. [Climate] [Engineering]
K-ESS3 Earth and Human Activity	How can humans help the Earth?
K-ESS3-1	Priority: WA K.ESS3

NGSS (2013)	WA Science (2024)
Use a model to represent the relationship between the needs of different plants or animals (including humans) and the places they live.* K-ESS3-2 Ask questions to obtain information about the purpose of weather forecasting to prepare for, and respond to, severe weather.* K-ESS3-3 Communicate solutions that will reduce the impact of humans on the land, water, air, and/or other living things in the local environment.	Develop and share ideas about how humans can help and protect the environment where they live. K-ESS3-3 Communicate solutions that will reduce the impact of humans on the land, water, air, and/or other living things in the local environment. [Climate] [Engineering] [ESE]
K-2-ETS 1 Engineering Design	How do we engineer solutions to a problem?
K-2-ETS1-1 Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool. K-2-ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem. K-2-ETS1-3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs	Priority: WA K.ETS1 Use and apply the engineering design process to design, test, and improve innovations and solutions to problems. K-2-ETS1-1 Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool. K-2-ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem. K-2-ETS1-3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.
	Environmental and Sustainability Education

NGSS (2013)	WA Science (2024)
Addition of Environmental and Sustainability Education	Priority: WA.K.ESE.1 Through project-based learning, develop an investigation related to the interconnected spheres of nature, society, and the economy in partnership with local communities, including tribes, then communicate about and act upon solutions for local environmental problems. K.ESE.1-1 Design an investigation to explore phenomena related to the roles of money, society, environmental problems, and sustainability solutions in local and tribal communities. K.ESE.1-2 Analyze and evaluate data gathered on school grounds to explain local scientific phenomena resulting from the influence that natural settings and human-built structures have on each other. K.ESE.1-3 Engage in place-based learning to communicate about and act on personal and collective solutions for sustainable communities, with a focus on tribal sovereignty.

Grade 1

NGSS (2013)	WA Science (2024)
1-PS4 Waves and Their Applications in Technologies for Information Transfer	What can light and sound do?
1-PS4-1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate 1-PS4-2 Make observations to construct an evidence-based account that objects can be seen only when illuminated 1-PS4-3 Plan and conduct an investigation to determine the effect of placing objects made with different materials in the path of a beam of light. 1-PS4-4 Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance.	Priority: WA.1.PS4 Use evidence, data, and investigation to show and explain how light and sound behave; use learned understandings to design a solution to a communication problem. 1-PS4-1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate. 1-PS4-2 Make observations to construct an evidence-based account that objects can be seen only when illuminated. 1-PS4-3 Plan and conduct an investigation to determine the effect of placing objects made with different materials in the path of a beam of light. 1-PS4-4 Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance. [Engineering]
1-LS1 From Molecules to Organisms: Structures and Processes	How do the structures and behaviors of living things help them survive?
1-LS1-1 Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs. 1-LS1-2	Priority: WA 1.LS1 Use research and investigation to show and explain how plants and animals use parts and behaviors to survive: use learned understandings to engineer a solution to a human problem. 1-LS1-1

NGSS (2013)	WA Science (2024)
Read texts and use media to determine patterns in behavior of parents and offspring that help offspring survive	Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs. [Engineering] [ESE] 1-LS1-2 Read texts and use media to determine patterns in behavior of parents and offspring that help offspring survive.
1-LS3 Heredity: Inheritance and Variation of Traits	How are living things similar and different from their parents?
1-LS3-1 Make observations to construct an evidence-based account that young plants and animals are like, but not exactly like, their parents.	Priority: WA 1.LS3 Use observational evidence to show and explain similarities and differences between plant and animal parents and their offspring. 1-LS3-1 Make observations to construct an evidence-based account that young plants and animals are like, but not exactly like, their parents.
1-ESS1 Earth's Place in the Universe	How do the sun, moon, and stars cause patterns in what we see on Earth?
1-ESS1-1 Use observations of the sun, moon, and stars to describe patterns that can be predicted 1-ESS1-2 Make observations at different times of year to relate the amount of daylight to the time of year.	Priority: WA 1.ESS1 Use evidence, data, and observation to notice and describe patterns in daylight and in the movement of the Sun, Moon, and stars. 1-ESS1-1 Use observations of the sun, moon, and stars to describe patterns that can be predicted. 1-ESS1-2 Make observations at different times of year to relate the amount of daylight to the time of year.
K-2-ETS1 Engineering Design	How do we engineer solutions to a problem?
K-2-ETS1-1 Ask questions, make observations, and gather information about a situation people want to	Priority: WA 1.ETS1

NGSS (2013)	WA Science (2024)
change to define a simple problem that can be solved through the development of a new or improved object or tool. K-2-ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem. K-2-ETS1-3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs	Use and apply the engineering design process to design, test, and improve innovations and solutions to problems. K-2-ETS1-1 Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool. K-2-ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem. K-2-ETS1-3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.
	Environmental and Sustainability Education
Addition of Environmental and Sustainability Education	Priority: WA.1.ESE.1 Apply project-based learning to communicate about and act upon solutions for environmental problems in partnership with local communities, including tribes. 1.ESE.1-1 Design an investigation to explore how money, society, and the environment are connected to environmental problems and sustainability solutions in local and tribal communities. 1.ESE.1-2 Explore school grounds to engage in inquiry and explain scientific phenomena related to how natural settings and human-built structures influence each other.

NGSS (2013)	WA Science (2024)
	1.ESE.1-3 Apply the knowledge and skills necessary to communicate about and act on personal and collective solutions for sustainable communities.

Grade 2

NGSS (2013)	WA Science (2024)
2-PS1 Matter and Its Interactions	How do we know which materials are right for the job?
2-PS1-1 Plan and conduct an investigation to describe and classify different kinds of materials by their observable properties. 2-PS1-2 Analyze data obtained from testing different materials to determine which materials have the properties that are best suited for an intended purpose. 2-PS1-3 Make observations to construct an evidence-based account of how an object made of a small set of pieces can be disassembled and made into a new object. 2-PS1-4 Construct an argument with evidence that some changes caused by heating or cooling can be reversed and some cannot.	Priority: WA 2.PS1 Use evidence, data, and investigation to describe matter and its properties; apply learned understandings about properties to identify and explain materials suitable for a given purpose. 2-PS1-1 Plan and conduct an investigation to describe and classify different kinds of materials by their observable properties. 2-PS1-2 Analyze data obtained from testing different materials to determine which materials have the properties that are best suited for an intended purpose. [Engineering] [ESE] 2-PS1-3 Make observations to construct an evidence-based account of how an object made of a small set of pieces can be disassembled and made into a new object. 2-PS1-4 Construct an argument with evidence that some changes caused by heating or cooling can be reversed and some cannot.
2-LS2 Ecosystems: Interactions, Energy, and Dynamics	How do plants get what they need to grow and reproduce?
2-LS2-1 Plan and conduct an investigation to determine if plants need sunlight and water to grow. 2-LS2-2	Priority: WA 2.LS2 Use evidence, investigation and modeling to show and explain how matter, energy, and sometimes animals are needed for plants to grow and reproduce. 2-LS2-1

NGSS (2013)	WA Science (2024)
Develop a simple model that mimics the function of an animal in dispersing seeds or pollinating plants.	Plan and conduct an investigation to determine if plants need sunlight and water to grow. [ESE] 2-LS2-2 Develop a simple model that mimics the function of an animal in dispersing seeds or pollinating plants. [Engineering]
2-LS4 Biological Evolution: Unity and Diversity	How many different plants and animals can live in a habitat?
2-LS4-1 Make observations of plants and animals to compare the diversity of life in different habitats.	Priority: WA 2.LS4 Use evidence and data to identify and compare the variety of living things in different habitats. 2-LS4-1 Make observations of plants and animals to compare the diversity of life in different habitats. [ESE]
2-ESS1 Earth's Place in the Universe	What do Earth's features look like and how do they change?
2-ESS1-1 Use information from several sources to provide evidence that Earth events can occur quickly or slowly.	Priority: WA 2.ESS1 Use research, evidence, and data to show and explain quick and slow changes in the Earth's appearance. 2-ESS1-1 Use information from several sources to provide evidence that Earth events can occur quickly or slowly. [Climate]
2-ESS2 Earth's Systems	What do Earth's features look like and how do they change?
2-ESS2-1 Compare multiple solutions designed to slow or prevent wind or water from changing the shape of the land. 2-ESS2-2 Develop a model to represent the shapes and kinds of land and bodies of water in an area. 2-ESS2-3	Priority: WA 2.ESS2 Use research, maps and modeling to understand and represent land and water on Earth; use engineering thinking to analyze and compare solutions to erosion changing the land's appearance. 2-ESS2-1 Compare multiple solutions designed to slow or prevent wind or water from

NGSS (2013)	WA Science (2024)
Obtain information to identify where water is found on Earth and that it can be solid or liquid	changing the shape of the land. [Engineering] [ESE] 2-ESS2-2 Develop a model to represent the shapes and kinds of land and bodies of water in an area. [ESE] 2-ESS2-3 Obtain information to identify where water is found on Earth and understand that it can be solid or liquid. [ESE]
K-2-ETS1 Engineering Design	How do we engineer solutions to a problem?
K-2-ETS1-1 Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool. K-2-ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem. K-2-ETS1-3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs	Priority: WA 2.ETS1 Use and apply the engineering design process to design, test, and improve innovations and solutions to problems. K-2-ETS1-1 Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool. K-2-ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem. K-2-ETS1-3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.
	Environmental and Sustainability Education
Addition of Environmental and Sustainability Education	Priority: WA.2.ESE.1 Through project-based learning, synthesize information from multiple sources about local ecological, social, and economic systems to

NGSS (2013)	WA Science (2024)
	communicate and act upon solutions for environmental problems in the community with partners, including tribes. 2.ESE.1-1 Research multiple perspectives to understand and communicate ideas about how money, society, and the environment are connected to environmental problems and solutions found in class, at school, at home, and in local tribal communities. 2.ESE.1-2 Use the school grounds and campus to identify connections between the natural world and human-made structures, then gather, analyze, and draw conclusions from data gathered during field-based learning. 2.ESE.1-3 Apply knowledge and skills to select a cost-effective approach to solve an environmental problem among many alternative solutions, then take individual or collective action to authentically communicate about or implement their solution.

Grade 3

NGSS (2013)	WA Science (2024)
3-PS2 Motion and Stability: Forces and Interactions	How do objects move and interact with other objects?
3-PS2-1 Plan and conduct an investigation to provide evidence of the effects of balanced and unbalanced forces on the motion of an object. 3-PS2-2 Make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion. 3-PS2-3 Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other. 3-PS2-4 Define a simple design problem that can be solved by applying scientific ideas about magnets.	Priority: WA 3.PS2 Use evidence and data to investigate and measure an object's motion and how forces affect the motion of objects; use acquired understandings to show how magnetic forces can be used in engineering solutions. 3-PS2-1 Plan and conduct an investigation to provide evidence of the effects of balanced and unbalanced forces on the motion of an object. 3-PS2-2 Make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion. 3-PS2-3 Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other. 3-PS2-4 Define a simple design problem that can be solved by applying scientific ideas about magnets. [Engineering]
3-LS1 From molecules to Organisms: Structures and Processes	How do living things grow and develop over their lifetime?
3-LS1-1 Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death.	Priority: WA 3.LS1 Use modeling to show, compare, and contrast life cycle patterns. 3-LS1-1 Develop models to describe that organisms have unique and diverse life cycles, but all

NGSS (2013)	WA Science (2024)
	have in common birth, growth, reproduction, and death.
3-LS2 Ecosystems: Interactions, Energy, and Dynamics	
3-LS2-1 Construct an argument that some animals form groups that help members survive.*	Grouped with Priority: WA 3.LS4
3-LS3 Heredity: Inheritance and Variation of Traits	What makes living things look the way they do? How does appearance affect survival and reproduction?
3-LS3-1 Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.	Priority: WA 3.LS3 Use evidence and data to show and explain inherited and acquired traits; apply understanding of traits to explain how variations can affect survival and reproduction.
3-LS3-2 Use evidence to support the explanation that traits can be influenced by the environment.	3-LS3-1 Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms. 3-LS3-2 Use evidence to support the explanation that traits can be influenced by the environment. [ESE]
	3-LS4-2 Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing.
3-LS4 Biological Evolution: Unity and Diversity	How are characteristics, behaviors, and needs of living things related to their environments where they live?
3-LS4-1 Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago.	Priority: WA 3.LS4 Use evidence, data, and modeling to show and explain how characteristics and behaviors of living things are related to how well they

NGSS (2013)	WA Science (2024)
3-LS4-2 Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing.* 3-LS4-3 Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all. 3-LS4-4 Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change.	can survive in their environment; use learned understandings to analyze solutions to problems caused by environmental changes. 3-LS2-1 Construct an argument that some animals form groups that help members survive. 3-LS4-1 Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago. 3-LS4-3 Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all. [Climate] [ESE] 3-LS4-4 Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change. [Engineering] [ESE]
3-ESS2 Earth's Systems	What is weather and climate like in different places and how does it affect living things?
3-ESS2-1 Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season. 3-ESS2-2 Obtain and combine information to describe climates in different regions of the world.	Priority: WA 3.ESS2 Use research, data, and modeling to show and explain patterns in weather and climate. 3-ESS2-1 Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season. [Climate] [ESE] 3-ESS2-2 Obtain and combine information to describe climates in different regions of the world. [Climate]

NGSS (2013)	WA Science (2024)
3-ESS3 Earth and Human Activity	What is weather and climate like in different places and how does it affect living things?
3-ESS3-1 Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard.	Priority: WA 3.ESS3 Use engineering thinking to compare and analyze solutions to weather related problems. 3-ESS3-1 Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard. [Climate] [Engineering] [ESE]
3-5-ETS1 Engineering Design	How do we engineer solutions to a problem?
3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost. 3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem. 3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.	Priority: WA 3.ETS1 Use and apply the engineering design process to design, test, and improve innovations and solutions to problems. 3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost. 3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem. 3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.
	How do we work together to ensure a healthy environment and sustainable economy for future generations?
Addition of Environmental and Sustainability Education	Priority: WA.3.ESE.1 Through project-based learning, synthesize information from multiple sources about local ecological, social, and economic systems,

NGSS (2013)	WA Science (2024)
	collaborating with partners and tribes in ways that foster solutions to local environmental problems. 3.ESE.1-1 Cite multiple sources and perspectives in an analysis of and presentation about environmental sustainability in the community, considering values at the individual, community, and tribal level. 3.ESE.1-2 Design an investigation on school grounds to gather, analyze, and present data about how the built environment of the school improves or reduces environmental quality (e.g. impacts on/benefits to water quality, air quality, biodiversity, waste). 3.ESE.1-3 Gather, analyze, and evaluate information, building the knowledge, attitudes, and understanding needed to demonstrate personal and civic responsibility for improved environmental sustainability at the local level.

Grade 4

NGSS (2013)	WA Science (2024)
4-PS3 Energy	What can energy do and how can we use it?
4-PS3-1 Use evidence to construct an explanation relating the speed of an object to the energy of that object 4-PS3-2 Make observations to provide evidence that energy can be transferred from place to place by sound, light, heat, and electric currents 4-PS3-3 Ask questions and predict outcomes about the changes in energy that occur when objects collide 4-PS3-4 Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.	Priority: WA 4.PS3 Use evidence, data, and investigation to explain energy transfer and the energy of objects in motion; apply these understandings to design and build a device that converts energy. 4-PS3-1 Use evidence to construct an explanation relating the speed of an object to the energy of that object. 4-PS3-2 Make observations to provide evidence that energy can be transferred from place to place by sound, light, heat, and electric currents. 4-PS3-3 Ask questions and predict outcomes about the changes in energy that occur when objects collide. 4-PS3-4 Apply scientific ideas to design, test, and refine a device that converts energy from one form to another. [Engineering]
4-PS4 Waves and Their Applications in Technologies for Information Transfer	What can energy do and how can we use it?
4-PS4-1 Develop a model of waves to describe patterns in terms of amplitude and wavelength and that waves can cause objects to move 4-PS4-2 Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen.	Priority: WA 4.PS4 Use investigation, evidence and modeling to show and explain how energy behaves, including as waves; design and evaluate solutions that use energy in patterns to communicate. 4-PS4-1 Develop a model of waves to describe patterns in terms of amplitude and

NGSS (2013)	WA Science (2024)
4-PS4-3 Generate and compare multiple solutions that use patterns to transfer information.	wavelength and that waves can cause objects to move. 4-PS4-2 Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen. 4-PS4-3 Generate and compare multiple solutions that use patterns to transfer information. [Engineering]
4-LS1 From Molecules to Organisms: Structures and Processes	How do internal and external structures help living things function and survive?
4-LS1-1 Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction 4-LS1-2 Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways.	Priority: WA 4.LS1 Use modeling to show and explain internal and external structures of plants and animals that help them live successfully. 4-LS1-1 Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction. 4-LS1-2 Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways.
4-ESS1 Earth's Place in the Universe	What are Earth's features and how do they change?
4-ESS1-1 Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in a landscape over time.	Priority: WA 4.ESS1 Use evidence to show and explain how Earth's features have changed over time. 4-ESS1-1 Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in a landscape over time. [Climate]

NGSS (2013)	WA Science (2024)
4-ESS2 Earth's Systems	What are Earth's features and how do they change?
4-ESS2-1 Make observations and/or measurements to provide evidence of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation. 4-ESS2-2 Analyze and interpret data from maps to describe patterns of Earth's features.	Priority: WA 4.ESS2 Use investigation, evidence, and data to show and explain patterns in Earth's features and what causes those features to change. 4-ESS2-1 Make observations and/or measurements to provide evidence of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation. [Climate] [ESE] 4-ESS2-2 Analyze and interpret data from maps to describe patterns of Earth's features. [ESE]
4-ESS3 Earth and Human Activity	How do humans and the Earth affect each other?
4-ESS3-1 Obtain and combine information to describe that energy and fuels are derived from natural resources and that their uses affect the environment. 4-ESS3-2 Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.	Priority: WA 4.ESS3 Research to understand and explain human impacts on the environment and design solutions to lessen impacts of environmental events on humans. 4-ESS3-1 Obtain and combine information to describe that energy and fuels are derived from natural resources and that their uses affect the environment. [ESE] 4-ESS3-2 Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans. [Engineering] [ESE]
3-5-ETS1 Engineering Design	How do we engineer solutions to a problem?
3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost. 3-5-ETS1-2	Priority: WA 4.ETS1 Use and apply the engineering design process to design, test, and improve innovations and solutions to problems. 3-5-ETS1-1

NGSS (2013)	WA Science (2024)
Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem. 3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.	Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost. 3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem. 3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.
	How do we work together to ensure a healthy environment and sustainable economy for future generations?
Addition of Environmental and Sustainability Education	Priority: WA.4.ESE.1 Through project-based learning, synthesize evidence using information from multiple sources about local ecological, social, and economic systems to collaborate with community partners and tribes in ways that foster solutions to local environmental problems. 4.ESE.1-1 Cite multiple sources and perspectives in an analysis of and presentation about environmental sustainability in the community, considering values at the individual, community, and tribal level. 4.ESE.1-2 Design an investigation on school grounds to make observations and/or measurements that provide evidence of the built environment's effect on environmental quality (e.g. impacts on/benefits to water quality, air quality, biodiversity, waste).

NGSS (2013)	WA Science (2024)
	4.ESE.1-3 Apply scientific ideas to solve design problems related to environmental sustainability, demonstrating the knowledge, attitudes, and understanding needed for personal and civic responsibility related to tribal sovereignty in Washington.

Grade 5

NGSS (2013)	WA Science (2024)
5-PS1 Matter and Its Interactions	What are the properties of matter and what causes those properties to change or stay the same?
5-PS1-1 Develop a model to describe that matter is made of particles too small to be seen. 5-PS1-2 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved. 5-PS1-3 Make observations and measurements to identify materials based on their properties. 5-PS1-4 Conduct an investigation to determine whether the mixing of two or more substances results in new substances.	Priority: WA 5.PS1 Use evidence, data, and modeling to investigate and measure the properties of matter and how combining matter or changing its temperature affects those properties. 5-PS1-1 Develop a model to describe that matter is made of particles too small to be seen. 5-PS1-2 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved. 5-PS1-3 Make observations and measurements to identify materials based on their properties. 5-PS1-4 Conduct an investigation to determine whether the mixing of two or more substances results in new substances.
5-PS2 Motion and Stability: Forces and Interactions	How does living on Earth affect what we see and feel?
5-PS2-1 Support an argument that the gravitational force exerted by Earth on objects is directed down.	Priority: WA 5.PS2 Use evidence, data, and modeling to show and explain how Earth's mass affects how objects on its surface feel (weight) and behave. 5-PS2-1

NGSS (2013)	WA Science (2024)
	Support an argument that the gravitational force exerted by Earth on objects is directed down.
5-PS3 Energy	How do living things use matter and energy?
5-PS3-1 Use models to describe that energy in animals' food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the sun.	Priority: WA 5.PS3 Use models to show and explain how the Sun's energy is passed through systems made up of plants and animals, including how that energy is used for life processes. 5-PS3-1 Use models to describe that energy in animals' food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the sun.
5-LS1 From Molecules to Organisms: Structures and Processes	How do living things use matter and energy?
5-LS1-1 Support an argument that plants get the materials they need for growth chiefly from air and water.	Priority: WA 5.LS1 Use investigation, evidence and data to show and explain where plants obtain matter needed grow. 5-LS1-1 Support an argument that plants get the materials they need for growth chiefly from air and water.
5-LS2 Ecosystems: Interactions, Energy, and Dynamics	How do living things use matter and energy?
5-LS2-1 Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment.	Priority: WA 5.LS2 Use evidence, data, and modeling to show and explain the movement of matter among living and non-living parts of an ecosystem. 5-LS2-1 Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment. [Climate] [ESE]
5-ESS1 Earth's Place in the Universe	How does living on Earth affect what we see and feel?
5-ESS1-1	Priority: WA 5.ESS1

NGSS (2013)	WA Science (2024)
Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from Earth. 5-ESS1-2 Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.	Use evidence, data, and modeling to show and explain how relative locations and motion of the Earth, Sun, Moon, and stars result in patterns of what we see on Earth. 5-ESS1-1 Support an argument that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from Earth. 5-ESS1-2 Represent data in graphical displays to reveal patterns of daily changes in length and direction of shadows, day and night, and the seasonal appearance of some stars in the night sky.
5-ESS2 Earth's Systems	How do Earth's parts work together?
5-ESS2-1 Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact. 5-ESS2-2 Describe and graph the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.	Priority: WA 5.ESS2 Use evidence and modeling to show and explain how the four major spheres of the Earth interact with each other and the effects of those interactions. 5-ESS2-1 Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact. [Climate] [ESE] 5-ESS2-2 Describe and graph the amounts of salt water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth. [ESE]
5-ESS3 Earth and Human Activity	How can humans work together to take care of our Earth?
5-ESS3-1 Obtain and combine information about ways individual communities use science ideas to protect the Earth's resources and environment.	Priority: WA 5.ESS3 Conduct research to show and explain how communities can positively affect the health of their local and global environment.

NGSS (2013)	WA Science (2024)
	5-ESS3-1 Obtain and combine information about ways individual communities use science ideas to protect the Earth’s resources and environment. [Climate] [ESE]
3-5-ETS1 Engineering Design	How do we engineer solutions to a problem?
3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost. 3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem. 3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.	Priority: WA 5.ETS1 Use and apply the engineering design process to design, test, and improve innovations and solutions to problems. 3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost. 3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem. 3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.
	How do we work together to ensure a healthy environment and sustainable economy for future generations?
Addition of Environmental and Sustainability Education	Priority: WA.5.ESE.1 Through project-based learning, synthesize information about ecological, social, and economic systems from multiple sources to understand, design, communicate, and act upon solutions for local environmental problems with community partners, including tribes. 5.ESE.1-1 Cite multiple sources and perspectives in an analysis of a relevant local

NGSS (2013)	WA Science (2024)
	environmental problem and how it connects to social, economic, and environmental systems, considering personal values at individual, community, and tribal scales. 5.ESE.1-2 Design an investigation on school grounds to gather, analyze, and present data about how the built environment of the school improves or reduces environmental quality (e.g. impacts on/benefits to water quality, air quality, biodiversity, waste). 5.ESE.1-3 Conduct a project that specifies a local environmental problem, identifies solution paths, solves the problem, and reports results demonstrating individual knowledge, attitudes, and understanding of personal and civic responsibility for improved environmental justice and sustainability.

Middle School

NGSS (2013)	WA Science (2024)
MS-PS1 Matter and its Interactions	MS-PS1 Matter and its Interactions: How do atomic and molecular interactions explain the properties of matter that we see and feel?
MS-PS1-1 Develop models to describe the atomic composition of simple molecules and extended structures. MS-PS1-2 Analyze and interpret data on the properties of substances before and after the substances interact to determine if a chemical reaction has occurred. MS-PS1-3 Gather and make sense of information to describe that synthetic materials come from natural resources and impact society. MS-PS1-4 Develop a model that predicts and describes changes in particle motion, temperature, and state of a pure substance when thermal energy is added or removed. MS-PS1-5 Develop and use a model to describe how the total number of atoms does not change in a chemical reaction and thus mass is conserved. MS-PS1-6 Undertake a design project to construct, test, and modify a device that either releases or absorbs thermal energy by chemical processes.	Priority: WA.MS.PS1 Use evidence, data, and modeling to show how atomic and molecular interactions explain the properties of matter. Apply this understanding to engineer a device that releases or absorbs thermal energy. MS-PS1-1 Develop models to describe the atomic composition of simple molecules and extended structures. [Climate] MS-PS1-2 Analyze and interpret data on the properties of substances before and after the substances interact to determine if a chemical reaction has occurred. MS-PS1-3 Gather and make sense of information to describe that synthetic materials come from natural resources and impact society. HS-PS1 Matter and its Interactions	HS-PS1 Matter and its Interactions: How can one explain the structure, properties, and interactions of matter?
HS-PS1-1 Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms. HS-PS1-2 Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties. HS-PS1-3 Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles. HS-PS1-4 Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy. HS-PS1-5 Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs. HS-PS1-6 Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.	Priority: WA.HS.PS1 Develop and use models of atomic structures and patterns in data to understand the chemical properties of matter including outcomes of chemical reactions, nuclear reactions, and structures of substances. Apply this understanding to the energy of reactions, including rates and equilibrium with a refined design to increase the products of a reaction. HS-PS1-1 Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms. HS-PS1-2 Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties. HS-PS1-3 Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles. HS-PS1-4 Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy. HS-PS1-5

NGSS (2013)	WA Science (2024)
HS-PS1-7 Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction. HS-PS1-8 Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.	Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which the reaction occurs. [ESE] HS-PS1-6 Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium. [Engineering] HS-PS1-7 Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction. HS-PS1-8 Develop model to illustrate the changes in composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.
HS-PS2 Motion and Stability: Forces and Interactions	HS-PS2 Motion and Stability: Forces and Interactions: How can one explain and predict interactions between objects and within systems of objects?
HS-PS2-1 Analyze data to support the claim that Newton’s second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration. HS-PS2-2 Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system. HS-PS2-3	Priority: WA.HS.PS2 Plan an investigation, collect data, and use representations to create claims about relationships between net force, mass, and acceleration of a single object and about gravitational and electrostatic forces between objects, including magnets. Apply this understanding to systems of objects, designed materials, and collisions. HS-PS2-1 Analyze data to support the claim that Newton’s second law of motion describes the mathematical relationship among the
