Polar Bear

Let me tell you about an interesting animal -
The polar bear. A polar bear's scientific name is
Ursus maritimus. The class is ^{name} carnivore. It has
an ^{unusual} ~~amphibian~~ order. ^{name} Ursidae. Like every
animal a polar bear ^{comes from a scientific family, the polar}
and black bear. ^{comes from the brown bear} The polar bear's fur and
thick layers of fat beneath their skin
protect them in the bitter cold.

Polar bears' ^{scientific} genus is *Thalacetos*. Polar
bears have a keen sense of smell. They
can smell food as much as 10 miles (16
kilometers) away can sniff out seals' dens
covered by thick layers of snow and ice. Polar
bears are slow, good climbers and good
swimmers. Their ^{species} is called *Ursus*.

Did you know you can see a polar
bear's black nose from 6 miles away? The fur can
might look like it's white but don't get fooled
because it's really clear and the sun reflects off it.
The ^{polar bear's} ~~polar bear~~ is Arctic. I know I don't live in
cold places, but a polar bear's habitat is in a
cold climate. It is cold, wet, damp, and evil.

It ^{can be} ~~is~~ 10 ft. ^{tall} ~~height~~. It can weigh more than
a person can ^{lift} ~~carry~~ 1,000 ^{lbs.} ~~lbs.~~ or 1,000. It is 8 to
11 feet ^{long}. It gives live birth. ^{gestation period} ~~period~~ 9
months. People are their threat. They eat seals,
fish, and other sea animals. Polar bears are
well suited for life on the ice. They
are ^{immediately} ~~immediately~~ strong and active the rest of their
