

interpret the value of each  
place-value position as 10  
times the position to the right  
and as one-tenth of the value  
of the place to its left.[4.2A]

represent the value of the  
digit in whole numbers through  
1,000,000,000 and decimals to  
the hundredths using  
expanded notation and  
numerals.[4.2B]

compare and order whole  
numbers to 1,000,000,000 and  
represent comparisons using  
the symbols  $>$ ,  $<$ , or  $=$ . [4.2C]

round whole numbers to a  
given place value through the  
hundred thousands place.

[4.2D]

represent decimals, including  
tenths and hundredths, using  
concrete and visual models and  
money.[4.2E]

compare and order decimals  
using concrete and visual  
models to the hundredths.

[4.2F]

relate decimals to fractions  
that name tenths and  
hundredths.[4.2G]

determine the corresponding decimal to the tenths or hundredths place of a specified point on a number line.[4.2H]

represent a fraction  $a/b$  as a sum of fractions  $1/b$ , where  $a$  and  $b$  are whole numbers and  $b > 0$ , including when  $a > b$ .

[4.3A]

decompose a fraction in more than one way into a sum of fractions with the same denominator using concrete and pictorial models and recording results with symbolic representations.[4.3B]

determine if two given  
fractions are equivalent using  
a variety of methods.[4.3C]

compare two fractions with  
different numerators and  
different denominators and  
represent the comparison  
using the symbols  $>$ ,  $=$ , or  $<$ .

[4.3D]

represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations.[4.3E]

evaluate the reasonableness  
of sums and differences of  
fractions using benchmark  
fractions 0,  $\frac{1}{4}$ ,  $\frac{1}{2}$ ,  $\frac{3}{4}$ , and  
1, referring to the same whole.  
[4.3F]

represent fractions and  
decimals to the tenths or  
hundredths as distances from  
zero on a number line.[4.3G]

add and subtract whole  
numbers and decimals to the  
hundredths place using the  
standard algorithm.[4.4A]

determine products of a number and 10 or 100 using properties of operations and place value understandings.

[4.4B]

represent the product of 2 two-digit numbers using arrays, area models, or equations, including perfect squares through 15 by 15.

[4.4C]

use strategies and algorithms, including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties.[4.4D]

represent the quotient of up to a four-digit whole number divided by a one-digit whole number using arrays, area models, or equations.[4.4E]

use strategies and algorithms,  
including the standard  
algorithm, to divide up to a  
four-digit dividend by a one-  
digit divisor.[4.4F]

round to the nearest 10, 100,  
or 1,000 or use compatible  
numbers to estimate solutions  
involving whole numbers.[4.4G]

solve with fluency one- and two-step problems involving multiplication and division, including interpreting remainders.[4.4H]

represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity.[4.5A]

represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence.[4.5B]

use models to determine the formulas for the perimeter of a rectangle ( $l + w + l + w$  or  $2l + 2w$ ), including the special form for perimeter of a square ( $4s$ ) and the area of a rectangle ( $l \times w$ ).[4.5C]

solve problems related to  
perimeter and area of  
rectangles where dimensions  
are whole numbers.[4.5D]

identify points, lines, line  
segments, rays, angles, and  
perpendicular and parallel  
lines.[4.6A]

identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure.[4.6B]

apply knowledge of right  
angles to identify acute, right,  
and obtuse triangles.[4.6C]

classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines or the presence or absence of angles of a specified size.[4.6D]

illustrate the measure of an angle as the part of a circle whose center is at the vertex of the angle that is "cut out" by the rays of the angle. Angle measures are limited to whole numbers.[4.7A]

illustrate degrees as the units used to measure an angle, where  $1/360$  of any circle is one degree and an angle that "cuts"  $n/360$  out of any circle whose center is at the angle's vertex has a measure of  $n$  degrees. Angle measures are limited to whole numbers.[4.7B]

determine the approximate  
measures of angles in degrees  
to the nearest whole number  
using a protractor.[4.7C]

draw an angle with a given  
measure.[4.7D]

determine the measure of an unknown angle formed by two non-overlapping adjacent angles given one or both angle measures.[4.7E]

identify relative sizes of  
measurement units within the  
customary and metric  
systems.[4.8A]

convert measurements within the same measurement system, customary or metric, from a smaller unit into a larger unit or a larger unit into a smaller unit when given other equivalent measures represented in a table.[4.8B]

solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate.[4.8C]

represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions.[4.9A]

solve one- and two-step problems using data in whole number, decimal, and fraction form in a frequency table, dot plot, or stem-and-leaf plot.

[4.9B]

distinguish between fixed and  
variable expenses.[4.10A]

calculate profit in a given  
situation.[4.10B]

compare the advantages and  
disadvantages of various  
savings options.[4.10C]

describe how to allocate a weekly allowance among spending; saving, including for college, and sharing.[4.10D]

describe the basic purpose of financial institutions, including keeping money safe, borrowing money, and lending.[4.10E]

solve for products of decimals to the hundredths, including situations involving money, using strategies based on place-value understandings, properties of operations, and the relationship to the multiplication of whole numbers.[5.3E]

represent and solve addition and subtraction of fractions with unequal denominators referring to the same whole using objects and pictorial models and properties of operations.[5.3H]

add and subtract positive  
rational numbers fluently.

[5.3K]

describe the key attributes of the coordinate plane, including perpendicular number lines (axes) where the intersection (origin) of the two lines coincides with zero on each number line and the given point  $(0, 0)$ ; the  $x$ -coordinate, the first number in an ordered pair, indicates movement parallel to the  $x$ -axis starting at the origin; and the  $y$ -coordinate, the second number, indicates movement parallel to the  $y$ -axis starting at the origin.[5.8A]

describe the process for  
graphing ordered pairs of  
numbers in the first quadrant  
of the coordinate plane.[5.8B]

graph in the first quadrant of the coordinate plane ordered pairs of numbers arising from mathematical and real-world problems, including those generated by number patterns or found in an input-output table. [5.8C]

represent discrete paired  
data on a scatterplot.[5.9B]

solve one- and two-step  
problems using data from a  
frequency table, dot plot, bar  
graph, stem-and-leaf plot, or  
scatterplot.[5.9C]
