2nd Grade Math

Module 4: Addition and Subtraction within 200 with Word Problems to 100

Math Parent Letter

This document is created to give parents and students a better understanding of the math concepts found in Eureka Math (© 2013 Common Core, Inc.) that is also posted as the Engage New York material which is taught in the classroom. Module 4 of Eureka Math (Engage New York) covers strategies for adding and subtracting within 200. This newsletter will discuss Module 4, Topic E.

Topic E: Strategies for Decomposing Tens and Hundreds

Words to Know:

Decomposition means to take numbers apart in a problem to make it easier to understand and solve.

OBJECTIVES OF TOPIC E

- 1. Use number bonds to break apart three-digit minuends and subtract from the hundred.
- 2. Use manipulatives to represent subtraction with decompositions of 1 hundred as 10 tens and 1 ten as 10 ones.
- 3. Relate manipulative representations to a written method.
- 4. Use math drawings to represent subtraction with up to two decompositions and relate drawings to a written method.
- 5. Subtract from 200 and from numbers with zeroes in the tens place.

Focus Area- Topic E

Strategies for Decomposing Tens and Hundreds

Topic E begins with an extension of mental math strategies learned in first grade, when students learned to subtract from the ten by using number bonds. They return to this strategy to break apart three-digit minuends and subtract from the hundred. Restate 143 - 90 as 100 - 90 + 43.

Students use number disks on a place value chart to represent subtraction and develop an understanding of decomposition of tens and hundreds.

Solve: 136 – 57=

Set up the problem with number disks by counting out 1 hundred, 3 tens, and 6 ones.

We cannot subtract 7 ones from 6 ones, so we unbundle a ten. (Change 1 ten for 10 ones)

We can now subtract / ones from 16 ones.

Next page cont.

Let's move on to the tens. We cannot subtract 5 tens from 2 tens, so we need to unbundle a hundred (Change 1 hundred for 10 ones) leaving you with 0 hundreds. Now you can subtract 5 tens from 12 tens.

The above concrete model helps students see the answer to the question, "Do I have enough ones?" or, "Do I have enough tens?" When they do not, they exchange one of the larger units for ten of the smaller units. Repeated practice with this exchange solidifies their understanding that within a unit of ten there are 10 ones, and within a unit of a hundred there are 10 tens.

form.

ones hundreds tens ones tens hundreds hundreds tens

Using number disks on a place value chart, students review the concept that a unit of 100 is comprised of 10 tens. They then model 1 hundred as 9 tens and 10 ones and practice counting to 100 both ways (i.e., 10, 20, 30...100 and 10, 20...90, 91, 92, 93...100). Next, they model the decomposition of a hundred in one of 2 different strategies as they represent subtraction from 200.

Students use this same reasoning to subtract from numbers that have zero tens.
