1. Two students both solved the addition problem below using different methods.

$$18 + 9$$

Handwritten student work for $18 + 9 = 27$. The student decomposed 9 into 2 and 7. They first added $18 + 2 = 20$, and then added $20 + 7 = 27$. A bracket above the 2 and 7 in the first equation indicates this decomposition.

Handwritten student work for $18 + 9 = 27$. The student used the compensation method: they added 2 to 18 to get 20, and then subtracted 2 from 9 to get 7, resulting in $20 + 7 = 27$. The work shows $18 \xrightarrow{+2} 20$ and $9 \xrightarrow{-2} 7$.

Are they both correct? Why or why not?

2. Another two students solved the same problem using quick tens.

Handwritten student work for $18 + 9 = 29$. The student used the quick tens method: they added 2 to 18 to get 20, and then added the remaining 9 to get $20 + 9 = 29$. The work shows a vertical line next to the 18 and a vertical line of 9 dots next to the 9.

Handwritten student work for $18 + 9 = 27$. The student used the quick tens method: they added 2 to 18 to get 20, and then added the remaining 7 to get $20 + 7 = 27$. The work shows a vertical line next to the 18 and a vertical line of 7 dots next to the 9, with a bracket indicating that 2 from the 9 was added to 18 to make 20.

Are they both correct? Why or why not?

3. Circle any student work that is correct.
