Geometry Group Quiz – Chapter 7 (points)

\*\*SHOW YOUR WORK\*\*

Group Number: Key

Date:

Block:

**width > length  
SHORT ANSWER (points) 19**

- 1) The lengths of two sides of rectangle are in the ratio 2 : 3. If the perimeter is 60 in<sup>2</sup>, what are the length and width?

$$P = 2L + 2w$$

$$60 = 2(3x) + 2(2x)$$

$$\frac{60}{10} = \frac{10x}{10}$$

width = 2(6) = 12 in  
length = 3(6) = 18 in

$$x = 6$$

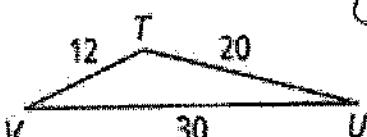

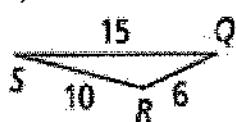

- 2)  $\triangle HJK \sim \triangle RST$ . Complete each statement.

$$\angle K \cong \boxed{\angle T}$$

$$\frac{JK}{ST} = \frac{\boxed{HK}}{\boxed{RT}}$$

- 3) Are the triangles similar? If yes, write a similarity statement and explain how you know they are similar. If not, explain.

a)

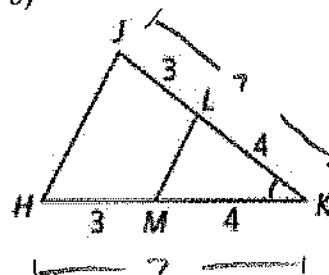

$$\frac{SR}{TV} = \frac{6}{12} = \frac{1}{2}$$

$$\frac{QR}{TU} = \frac{10}{20} = \frac{1}{2}$$

$$\frac{QS}{VU} = \frac{15}{30} = \frac{1}{2}$$

$$\Delta QRS \sim \Delta TVU$$
  
SSS ~

b)

$$\angle LK \cong \angle LK$$

$$\frac{KL}{KJ} = \frac{4}{7}$$

$$\frac{KM}{KJ} = \frac{4}{7}$$

$$\Delta KLM \sim \Delta KJH$$
  
SKS ~

- 4) Find the geometric mean of each pair of numbers. Leave answers as simplified radicals.

a) 9 and 12

$$X = \sqrt{9 \cdot 12}$$

b) 5 and 45

$$X = \sqrt{5 \cdot 45}$$

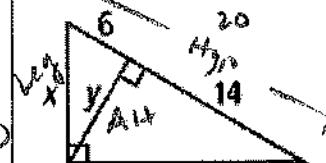

$$X = \boxed{6\sqrt{3}}$$

$$X = 2 \cdot 3 \sqrt{3}$$

$$\boxed{X = 6\sqrt{3}}$$

$$X = \boxed{15}$$

- 5) Find the values of x and y. Leave answers as simplified radicals.

$$\frac{20}{x} = \frac{6}{6}$$

$$6 \cdot 20 = 6 \cdot 6$$

$$\boxed{60}$$

$$\frac{6}{y} = \frac{y}{14}$$

$$6 \cdot 14 = y^2$$

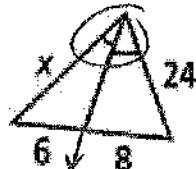

$$x^2 = \sqrt{6 \cdot 20}$$

$$\boxed{x = 2\sqrt{30}}$$

$$y^2 = 6 \cdot 14$$

$$y = \boxed{2\sqrt{21}}$$

- 6) What is the value of x?

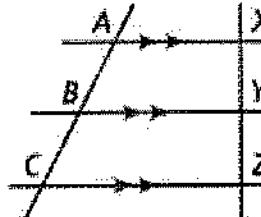

$$\frac{x}{24} = \frac{6}{8}$$

$$\frac{8x}{8} = \frac{144}{8}$$

$$\boxed{X = 18}$$

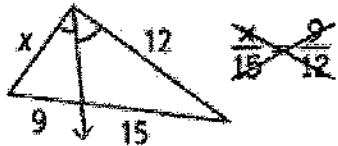

- 7) Use the figure to complete each proportion.

$$\frac{AB}{AC} = \frac{\boxed{XY}}{XZ}$$

$$\frac{AB}{XY} = \frac{BC}{YZ}$$

8) A classmate wrote an incorrect proportion to find  $x$ . Correct the error and find  $x$ .

$$\frac{x}{15} = \frac{9}{12}$$

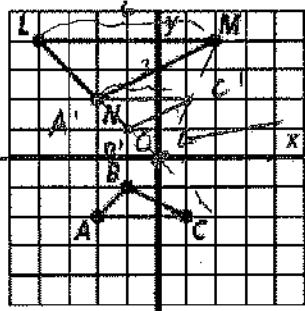

$$\frac{15x}{15} = \frac{108}{15}$$

$$x = 7.2$$

(1)

9) Fill-in the transformation that maps one figure to the other.

$$(D_{(2,0)} \circ R_{x\text{-axis}, 180})(\Delta ABC) = \Delta LMN$$

$$SF = \frac{LM}{AC} = \frac{6}{3} = 2$$

angle

(2)

10) Find the coordinates of the dilation.

$$a) P(2, -5) \quad D_{(3,0)}(P) \quad P'(-3, 3, 3, 11)$$

$$\boxed{P'(-3, 3, 3, 11)}$$

$$b) P(10, -20) \quad D_{(4,0)}(P) \quad P'(-4, 2, 4, -16)$$

$$\boxed{P'(-4, 2, 4, -16)}$$

(2)

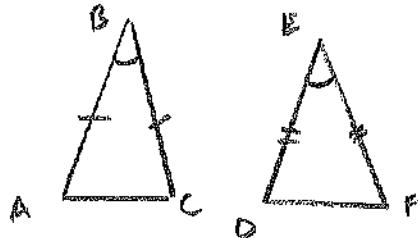

11) A student uses image and preimage lengths of an enlargement to find a scale factor of  $\frac{3}{4}$ . Explain how you know she has made an error.

For an enlargement, the SF must be greater than 1.

(1)

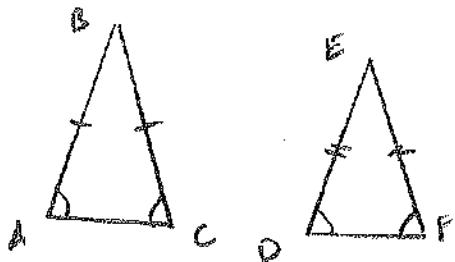

#### EXTENDED RESPONSE (points)

a) Can you prove that any two isosceles triangles are similar if you only know that the vertex angles are congruent? Explain. Use a drawing to help with your written explanation.

Yes by SAS~. The vertex  $\angle$ 's are the pair of  $\cong \angle$ 's. The sides that include these  $\angle$ 's are the  $\cong$  sides in each  $\triangle$ . Therefore, the ratios of corr. sides will be equal  $\left(\frac{AB}{DE} = \frac{BC}{EF}\right)$

b) Can you prove that any two isosceles triangles are similar if you only know that a pair of corresponding base angles is congruent? Explain. Use a drawing to help with your written explanation.

Yes by AAS~. The Isos. Thm states that the base  $\angle$  pairs in an isos.  $\triangle$  are  $\cong$ . Therefore, all 4 base  $\angle$ 's are  $\cong$ , thus giving 2 pairs of  $\cong$  corr.  $\angle$ 's.
