How do I calculate my cumulative GPA?

Step 1: Find your grades on PowerSchool and add up the proper amount of points using the guide below. Be sure to include quarter grades for each of your classes for all three quarters of the 2017-2018 school year.

$$A(90-100) = 4$$

$$B(80-89) = 3$$

$$C(70-79) = 2$$

$$D(60-69) = 1$$

$$F$$
 (59 and below) =0

Step 2: When all grades are added up, find the average or mean. The mean can be found by adding up all your grades and dividing by the number of grades used

Example:

Grades: 90, 95, 87, 100, 89

Points: 4, 4, 3, 4, 3 = 18

GPA: 18/5= 3.6 G.P.A
