

These may be xeroxed, separated, and handed out to assign students to Plate groups and specialties. I use the letter and number labels on this page if I don't want the students to know what they will get (the letters and numbers correspond to the plate groups and specialties on the student handout page). I find that I get a more random mix of groups this way. This is particularly true with older (college aged) students. For younger students, I use the text labels on the following pages.
