

# The Art of Candle Making

- By: Ashley Herron
- J.J. Kelly High School

# The supplies

- The supplies that I used while making the candles.
- The brown pot was used to heat water
- The silver pot was used to melt the wax
- In the orange bag it wax coloring
- The white chunk setting on the stove is the wax
- Beside that is the wax thermometer and the scented oils for candles
- Then the square silver mold is the wax mold maker.

# Step Number One

- First I had to put water into the big brown cooking pot.

# Step Number 2

- Next I had to place the silver pot with the wax, into the brown pot to melt the wax.

# Step Number 3

- This is a picture of the thermometer in the wax. The temperature needed to reach 185 before I could put it in the mold.

# Step Number 4

- This is the wax just beginning to melt.

# Step Number 5

- This was when I had added the coloring while the wax was still melting.

# Step Number 6

- This is after the wax had melted and I had put the coloring in it. The color was a orange and peach color.

# Step Number 7

- This is me adding the peaches and crème scent to the candle. I know they probably didn't scent theirs, but I wanted too.

# Final Step

- This is my brother and I cleaning up the mess that was made, when the bottom of the candle mold fell out on me.
