

HookED SOLO Hexagons Template Small

Directions: Grab a partner and give them one of the papers. You have one, They have one. Using a pair of scissors, cut out each individual hexagon on your page. First, connect your hexagons together that have something in common. For example, you can connect 40 and 70 together on one side because they both can divide by 10. On the other side of 40, you can connect a 35 because both 35 and 40 are divisible by 5. Get it?

The objective is to connect each hexagon on all sides and justify the connections you see.
