

Lab Safety Pamphlet

Chemistry

Pamphlets need a front intro (i.e. "Rules to Keep You Safe"). Each pamphlet will display 3 rules and at least 3 pictures/drawings. Credit (your names, period, date) on the back. Creativity and neatness are important. On projects, you should use glue rather than staples. You may use tape if it is not seen. Also, you should use markers, colored pencils, or magazine lettering rather than writing with a pen or pencil. Finally, you must use construction paper or colored copy paper rather than white notebook or copy paper.

Rubric:

19-20 - well done, neat, creative, all parts included

15-18 - satisfactory, not as neat, not as creative, all parts are present

13-14 – poor quality, most parts are present

Less than 13 - very poorly done, half or less was completed
