

Natural Hazards and Disasters Around the World: Focus on Seismic-Related Events

Natural Hazards and Disasters are capable of causing large amounts of damage, and loss of lives. Understanding them and what causes them can help us figure out how to prevent this damage in the future.

In this lesson, we will:

1. Discuss the difference between natural hazards and disasters
2. Research some examples and make observations
3. Use these observations to learn about what causes them

What do you think
caused this damage?

Natural Hazards vs. Natural Disasters

- What is the difference between a natural hazard, and a natural disaster?

Event Search

- Begin your Event Search assignment
- Follow the instructions on the assignment sheet
- Why do you think knowing the location of these events, as well as the damage they cause is important?
