

➡ Set up the scene

Figure out a spot on campus where you'd like to take your photos. It should be in a well lit area without a lot of foot traffic (no one walking behind your subject). Try to avoid trash cans in your image.

➡ Image 1: Levitation

Set up your scene. Be sure your subject is **IN FOCUS**. Make sure the object they are on is not in front of any part of their body. Take the photo.

➡ Image 2: The background

Remove the subject and their object used to prop them up. Do NOT change any setting on the camera OR move it. Take another photo.

Levitation

Goal: Use the

Materials: One subject, object to help lift the subject off of the ground, camera, & tripod.

Set Up: Each person is responsible for their OWN images and their OWN set up. You cannot be in your own photos. Make sure your camera is on **MANUAL FOCUS** and take your picture with the subject first. Do not move the equipment around for the second photos, just move the person and the prop.

See the EDITING INSTRUCTIONS for the next steps.
