

**Brunswick School Department**  
**Precalculus: Honors**  
**Unit 2: Trigonometric Functions**

<b>Essential Understandings</b>	<ul style="list-style-type: none"> <li>▪ Trigonometric functions have many applications in the real world.</li> <li>▪ Trigonometry is one of the oldest and most useful branches of mathematics.</li> </ul>
<b>Essential Questions</b>	<ul style="list-style-type: none"> <li>▪ What are the different ways of describing angles?</li> <li>▪ What is a unit circle and explain its relationship to real numbers?</li> <li>▪ How are trigonometric functions evaluated?</li> <li>▪ When are fundamental identities used?</li> <li>▪ How are trigonometric functions graphed?</li> <li>▪ What are inverse trigonometric functions?</li> <li>▪ What real-life problems are modeled by trigonometric functions?</li> </ul>
<b>Essential Knowledge</b>	<ul style="list-style-type: none"> <li>▪ One radian is the measure of a central angle that intercepts an arc equal in length to the radius of the circle.</li> <li>▪ A unit circle is a circle with a radius of one unit.</li> <li>▪ Trigonometric functions of a unit circle with <math>t</math> as a real number and <math>(x,y)</math> be a point on the unit circle corresponding to <math>t</math>....<math>\sin t=y</math>, <math>\cos t=x</math>, <math>\tan t=y/x</math>, <math>\csc t=1/y</math>, <math>\sec t=1/x</math>, <math>\cot t=x/y</math>.</li> <li>▪ The inverse of the sine function is <math>y = \arcsin x</math> if and only if <math>\sin y = x</math>.</li> </ul>
<b>Vocabulary</b>	<ul style="list-style-type: none"> <li>▪ <u>Terms:</u> <ul style="list-style-type: none"> <li>○ Trigonometry, negative angles, central angles, linear speed, angular speed, unit circle, sine, cosecant, cosine, secant, tangent, cotangent, periodic, period, reference angle, amplitude, phase shift, inverse functions, radian, unit circle, co-terminal angles</li> </ul> </li> </ul>
<b>Essential Skills</b>	<ul style="list-style-type: none"> <li>▪ Describe an angle and convert between degree and radian measure.</li> <li>▪ Identify a unit circle and its relationship to real numbers.</li> <li>▪ Evaluate trigonometric functions of any angle.</li> <li>▪ Use fundamental trigonometric identities.</li> <li>▪ Sketch graphs of trigonometric functions.</li> <li>▪ Evaluate inverse trigonometric functions.</li> <li>▪ Use trigonometric functions to model and solve real-life problems.</li> <li>▪ Change an angle from degree measure to radian measure.</li> <li>▪ Use the unit circle to evaluate the six trigonometric functions of <math>\theta</math>.</li> <li>▪ Evaluate the six trigonometric functions at any real number.</li> <li>▪ Evaluate the six trigonometric functions of any angle in radians or degrees.</li> <li>▪ Sketch the graph of a trigonometric function.</li> <li>▪ Sketch the graph of an inverse function.</li> <li>▪ Model trigonometric relationships.</li> <li>▪ Evaluate the compositions of trigonometric functions.</li> <li>▪ Apply sinusoidal functions.</li> </ul>

<p><b>Related Maine Learning Results</b></p>	<p>B4.Students understand that the purpose of random sampling is to reduce bias when creating a representative sample for a set of data.</p> <ul style="list-style-type: none"> <li>a. Describe and account for the difference between sample statistics and statistics describing the distribution of the entire population.</li> <li>b. Recognize that sample statistics produce estimates for the distribution of an entire population and recognize that larger sample sizes will produce more reliable estimates.</li> <li>c. Apply methods of creating random samples and recognize possible sources of bias in samples.</li> </ul> <p>Probability</p> <p>B5.Students understand the relationship of probability to relative frequency and know how to find the probability of compound events.</p> <ul style="list-style-type: none"> <li>a. Find the expected frequency of an event.</li> <li>b. Find the expected value of events.</li> <li>c. Find the probability of compound events including independent and dependent events.</li> </ul> <p>C. Geometry</p> <p>Geometric Figures</p> <p>C1.Students justify statements about polygons and solve problems.</p> <ul style="list-style-type: none"> <li>a. Use the properties of triangles to prove theorems about figures and relationships among figures.</li> <li>b. Solve for missing dimensions based on congruence and similarity.</li> <li>c. Use the Pythagorean Theorem in situations where right triangles are created by adding segments to figures.</li> <li>d. Use the distance formula.</li> </ul> <p>C2.Students justify statements about circles and solve problems.</p> <ul style="list-style-type: none"> <li>a. Use the concepts of central and inscribed angles to solve problems and justify statements.</li> <li>b. Use relationships among arc length and circumference, and areas of circles and sectors to solve problems and justify statements.</li> </ul> <p>C3.Students understand and use basic ideas of trigonometry.</p> <ul style="list-style-type: none"> <li>a. Identify and find the value of trigonometric ratios for angles in right triangles.</li> <li>b. Use trigonometry to solve for missing lengths in right triangles.</li> </ul> <p>Use inverse trigonometric functions to find missing angles in right triangles.</p>
