Lesson 1

Objective: Analyze and describe embedded numbers (to 10) using 5-groups and number bonds.

Suggested Lesson Structure

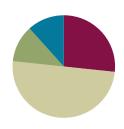

Student Debrief

■ Fluency Practice (16 minutes)
■ Application Problem (7 minutes)

Concept Development (30 minutes)

Total Time (60 minutes)

(7 minutes)

Fluency Practice (16 minutes)

■ Math Fingers Flash K.CC2, K.CC.4

Sprint: Count Dots K.CC.2, K.CC.5

(3 minutes)

(13 minutes)

NOTES ON FLUENCY PRACTICE:

Think of Fluency Practice as having three goals:

- 1. Maintenance (staying sharp on previously learned skills).
- 2. Preparation (targeted practice for the current lesson).
- 3. Anticipation (skills that ensure that students are ready for the in-depth work of upcoming lessons).

 Example of anticipatory fluency:
 Students must be secure in counting to 10 long before they can be expected to decompose 10.

Math Fingers Flash (3 minutes)

Note: Visually recognizing (perceptually subitizing) sets of objects, particularly fingers, allows students to move toward seeing two sets of objects together (conceptually subitizing), thus preparing them for the fluency objective of Grade 1.

Teacher flashes fingers the Math Way for numbers 0–10. When using a document camera, teacher begins by raising the left pinky and ends with the right pinky as shown above. When facing the students, teacher's raised fingers should begin with the right pinky and end with the left pinky as seen below. At all times, students see fingers move from left to right.

- T: I'm going to hold up some fingers the Math Way and then hide them. Look carefully and say the number you saw when I snap.
- T: (Flash 3 fingers for 2–3 seconds and then hide them.) Ready (snap).
- S: 3.

Repeat process for numbers within 5.

T: (Flash 7 fingers.) Ready (snap).

Lesson 1:

Lesson 1

- T: (Hold up 5 fingers on the right hand.) How many fingers are on this hand?
- S: 5.
- T: 5 (hold up the five hand and then hold up the other fingers, one at a time) 6, 7.

Repeat the process for numbers 6–10, inviting students to count on from 5.

Sprint: Count Dots (13 minutes)

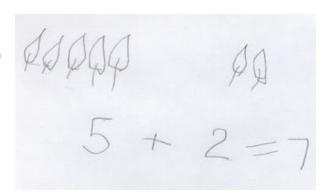

Materials: (S) 5-group dots Sprint

Note: Visually recognizing two sets of objects together (conceptually subitizing) provides students with a foundation for counting on as they solve addition problems. See the Suggested Methods of Instructional Delivery section of the Module Overview for directions on giving Sprints.

Application Problem (7 minutes)

Dora found 5 leaves that blew in through the window. Then, she found 2 more leaves that blew in. Draw a picture and use numbers to show how many leaves Dora found in all.

Note: Rather than specifying to write a number sentence or number bond, since it is the first day of school, this Application Problem is more open-ended so that students can demonstrate their thinking and representational skills. This problem serves as a lead-up to the Concept Development of seeing the quantity of 5 and another number.

Concept Development (30 minutes)

Materials: (T) 1 egg carton cut to 10 slots (S) 1 egg carton cut to 10 slots, bag with 9 beads (or other fun classroom objects), number bond (Template), personal white board

Before the lesson, insert the number bond template into each student's personal white board.

- T: Take out your egg carton. Count to find out how many slots there are. Wait for the signal to tell me. (Pause. When all are ready, give the signal.)
- S: 10.
- T: Someone already cut 2 off.
- T: How many slots are in the top row?
- S: 5.

Lesson 1:

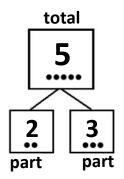

- T: How many slots are in the bottom row?
- S: 5.
- T: Take out the objects in your bag. First, count 5 into the top row from left to right. (Pause.) How many beads do you have in your top row?
- S: 5.
- T: Now, we are going to be number detectives. Let's see what numbers are *hiding* inside of 5.
- T: I see 2 hiding inside. Look. (Show the two objects.) What other numbers do you see hiding inside 5? Talk to your partner.
- T: (Circulate and listen. Encourage those who are touching and counting, rather than seeing the embedded numbers, to recognize quantities of at least 2 or 3.)
- T: (Write the 5 in the total box of a number bond.) That's our total, or whole. Do you remember these *number bonds* from kindergarten?
- S: Yes!
- T: You said there was a 2 hiding inside of 5. That's a part. (Write the 2 in the number bond.)
- T: Let's cover those 2 beads. What is the other part?
- S: 3.
- T: Let's write that in the other part of the number bond. (Write 3.)
- T: What two parts did we find make 5, detectives?
- S: 2 and 3.
- T: Let's see if we can find different numbers inside of 5. (Write 5 in the total box inside a new number bond.)
- T: (Continue to find the other numbers inside of 5 and generate the corresponding number bonds using the same process.)
- T: Let's take out 2 more beads, and put them in the bottom row of the egg carton.
- T: How many beads are there now?
- S: 7.
- T: Turn and talk to your partner about what numbers you see inside 7.
- S: (Circulate and share their observations.)

NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:

Discourage the touch and count behavior which many students mistake for being good at school. Grade 1 students can subitize twos and threes without counting. They should be encouraged to recognize this since seeing embedded numbers (or subitizing) is the beginning of counting on.

Number Bond

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

Have students write the two parts on their number bond template. For further support for counting on, have them draw the beads at first, and then later in the lesson, represent the 5-groups numerically.

Lesson 1:

Number bond with parts

drawn the

5-groups way

- T: I heard a student say that she saw 5 beads. Are there 5 beads?
- S: Yes!
- T: Let's draw 5 dots as a part in our number bond instead of the number 5.
- T: Where did you see the 5?
- S: In the top row.
- T: Let's cover the 5. What is the other part to make 7?
- S: 2
- T: Let's draw in 2 dots as the other part in the number bond.

MP.7

: Let's count on from 5 to find our total. Count with me. Let's start with 5. (Point to the fifth dot.)

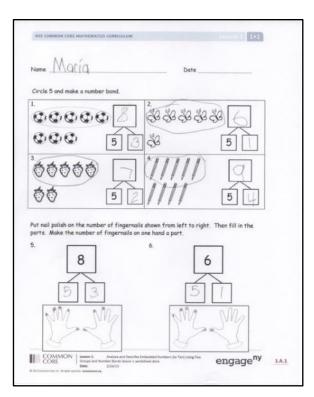

Continue to find five and its partner within 6, 7, 8, and 9. Other combinations will be explored in Lesson 2. Release students to work independently.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. Some problems do not specify a method for solving. This is an intentional reduction of scaffolding that invokes MP.5, Use Appropriate Tools Strategically. Students should solve these problems using the RDW approach used for Application Problems.

For some classes, it may be appropriate to modify the assignment by specifying which problems students should work on first. With this option, let the purposeful sequencing of the Problem Set guide each selection so that problems continue to be scaffolded. Balance word problems with other problem types to ensure a range of practice. Consider assigning incomplete problems for homework or at another time during the day.

Lesson 1:

Student Debrief (7 minutes)

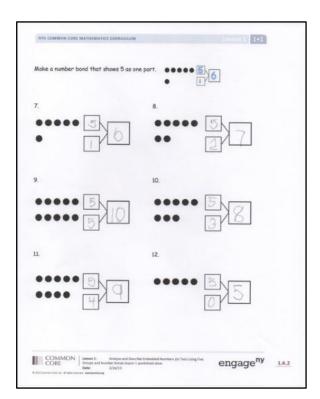

Lesson Objective: Analyze and describe embedded numbers (to 10) using 5-groups and number bonds.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. Have them work in pairs to check over their work and discuss how they saw the 5 and the other part to make their number bonds and find the totals. Then go over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Student Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

 Are there 5 butterflies? Strawberries? (We want students to see that there are 5 butterflies, etc., embedded within the larger numbers. Have them identify the other part once they have seen the five within the number.)

- Look at the soccer balls and the pencils. What is the same about them? What is different about them? (Guide students to see that both 8 and 9 have 5 embedded in them. If they notice the other embedded numbers of 1 to 8, that is great!)
- Can you show me 5 fingers? Show me 5 with two hands (i.e., 4 and 1, or 3 and 2). Now, show me 5 with one hand.
- Can you show me 6 the Math Way with your fingers? (Five fingers on the left hand and the thumb on the right hand.) Can you show me the 5 inside 6? Continue with 7, 8, 9, and 10.
- (Show examples of student work from the Application Problem.) What were the two parts in our story problem? What does that have in common with today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Homework

Homework at the K–1 level is not a convention in all schools. In this curriculum, homework is an opportunity for additional practice of the content from the day's lesson. The teacher is encouraged, with the support of parents, administrators, and colleagues, to discern the appropriate use of homework for his or her students. Fluency exercises can also be considered as an alternative homework assignment.

Lesson 1:

Analyze and describe embedded numbers (to 10) using 5-groups and number bonds.
