

Mathematics Grade K

This is a great time to share with your student that math is everywhere.

- Count Everything: Counting is a powerful activity that students can do anywhere. By the end of Kindergarten, students are expected to count to 100 by ones and tens and write numbers from 0 to 20.
- Talk about Shapes: Find, classify and sort shapes in your home. How many circles can you find, how many rectangles – and how many of those are squares.
- Measure everything. Use nonstandard tools like a shoe or even your hand to measure how tall a table is or how far you can jump.
- [Play Math Card Games](#) – these games can be used with any deck of cards.
- On to our school website, you will find [Families & Students-Math Resources-Grade K- Parent Tips](#). Under each topic you will find review information, sample problems and suggested activities. Teachers were currently teaching Module 4.
