

The Multiplication Game

Related Doubles Facts (x2, x4, x8)

Goal: Be the first person to own 3 spots in a row

Materials: objects in 2 colors to mark spots, pencil/pen

Directions: For Game 1, the first factor given is a 2. Player 1 may multiply 2 by any number 2-9, determine the product, place an object on the product, and write down the **factor** they chose down below. Player 2 now starts their turn using the **factor Partner 1 chose** and may multiply it by any number 2-9 (you can use the same number that was already chosen), mark their product with their colored object, and record the factor they chose down below. Play continues until one player owns 3 spots in a row horizontally, vertically, or diagonally. Then, the gameboard is cleared and you will begin with Game 2 and the factor 4.
