

NATURE: GREENS

For this assignment, use a DSLR camera, cell phone camera, or other to focus on the color GREEN.

Your images should be mostly greens and should fill the frame with various shades of green - other colors are okay as long as the dominant color remains VIRIDESCENT and VERDANT (other words for green.) .

Around your home, backyard, or neighborhood, photograph 10-15 images with the dominant color choice of GREEN and focusing on nature and botanicals. If you cannot leave the house, search your camera roll for images that will work and focus on the editing portion of the assignment.

Edit for contrast and vibrancy.

Please watch my editing style videos attached below to create the deep and moody green colors you see above.

Please edit in www.photopea.com, Snapseed, or Lightroom Mobile (last three for mobile editing.)

Turn in your two favorite **EDITED** images here on the assignment **AND** in the media gallery for the week.
