180 Days of
Number Sense Routines
Grade 4
Days 21-40

180 Days of
Number Sense Routines

WHY IS DEVELOPING NUMBER SENSE IMPORTANT? Number Sense is the foundational building block for all strands of mathematics. Students who struggle in mathematics do not lack mathematical ability, but rather, they simply do not have a strong number sense on which to build their knowledge. Just as we are not born knowing how to read, we are not born with Number Sense. It must be developed and nurtured over time through a progression of understandings about numbers and their relationships to one another. With time and focused practice, students come to understand that numbers are meaningful, and outcomes are sensible and expected. Number Sense development encourages students to think flexibly and promotes confidence with numbers.

WHAT IS A NUMBER SENSE ROUTINE? A routine is an activity or event that occurs on a regular basis over time. Routines provide a framework for our day to support both the teacher and students. Routines help to build community and create a safe learning environment for students. Routines build a sense of belonging, ownership, and predictability which make the classroom a place to take risks. We learn through risk-taking; we take risks when we feel safe; we feel safe in a supportive learning environment; we create supportive learning environments through routines. Just as we have established routines for bus dismissal and fire drills, we must also establish routines that build mathematical thinking and discourse.

180 Days of
Number Sense Routines

HOW WILL THESE NUMBER SENSE ROUTINES BENEFIT ME AND MY STUDENTS? What teachers do and how they do it is critically important and has a profound impact on the quality of the educational experience of our students. Effective pedagogy, the art and science of teaching, is a key element in the learning process. The Number Sense are models of effective pedagogy and ensure that the critical Number Sense instruction we provide is equitable to all our students regardless of geography, teacher experience, or student circumstance. As we prepare our students to be mathematically proficient in their lives beyond the classroom walls, these Number Sense routines will help to lay the critical foundation for all future mathematical endeavors.

WHAT ARE THE CCPS IMPLEMENTATION EXPECTATIONS? Number sense routines have been developed for all 180 instructional days in grades 1-5. These routines are to be used every day, including early dismissal, late arrival, and field trip days. Because the routines do not require a specific order, it is permissible to trade routines among days to best match the time available. Number Sense must be built over time. With consistency, we can build students' number sense creating a strong mathematical foundation. If students or the teacher is struggling with a routine, it is expected that the teacher collaborate with colleagues to build capacity in that routine – do not just choose to skip the routine. If additional help is needed, the teacher should seek the assistance of their content specialist or mathematics supervisor.

180 Days of
Number Sense Routines

HOW TO RUN POWERPOINT IN SLIDE SHOW MODE:
Slides with animation features, must run in Slide Show mode of PowerPoint for the animations to work correctly.

1. Select <Slide Show> from the menu at the top
2. Select <From Current Slide>

HOW TO ANNOTATE STUDENT THINKING ON THE SLIDE:
- With the slide in Slide Show mode, right click on the slide
- Select <Pointer Options> then choose <Pen>

180 Days of
Number Sense Routines

Acknowledgements

We are grateful to those who have inspired this project – and there have been many. These slide decks were designed for Grades 1–5 with custom-built daily routines for each grade level. The nine routines blend original creations, adaptations, and borrowed OER materials. We have made our work available in Open Educational Resources so that others may benefit as we have. Our deepest gratitude and respect to all those who helped move our work forward, and a special thank you goes to the following whose own work had such a tremendous impact on our 180 Days of Number Sense Routines:

- *Decide & Defend* and *Quick Count* routines were adapted from templates created by Grace Kelemanik and Amy Lucenta at http://FosteringMathPractices.com

- *Estimation Clipboard, Esti-Mysteries,* and *Splat!* templates created by www.SteveWyborney.com

- *Same But Different* discussion from Developing Grayscale Thinking by Looney Math Consulting at https://www.samebutdifferentmath.com

- *Which One Doesn't Belong* tasks adapted from http://wodb.ca by Mary Bourassa

Public Schools

Directions for the CHORAL COUNT routine

Choral Counting is an activity in which the teacher leads children in counting aloud together by a given number. As the class calls out each number, the teacher records the count on the board, pausing the count at strategic moments.

To begin, the teacher decides on a number for the students to skip count by, whether to count forwards or backwards, and what number to start and end the count on. Different numbers lend themselves well to surfacing different mathematical ideas.

The goal of this activity is not just to practice rote counting, but to engage children in reasoning, predicting, and justifying. To do this, teachers record the count so that patterns within the numbers are readily noticeable and pause during the count to ask questions like, "What do you think will come next? How do you know?"

– Tedd.org

Calvert County
Public Schools

Teacher: *Click the image to the left to see this routine in action before trying it with your students. Notice how the teacher charts the count to help make the patterns more visible to students.*

A blank grid for charting is on the next slide.

Count back by 100s – starting on 5,300

BEGIN WITH NUMBER: 5300

COUNTING RULE: -100

GOAL:
- Find PATTERNS within the counted numbers.
- Use those patterns to PREDICT numbers that will appear later in the counting sequence.

Using the DECIDE & DEFEND routine

As you do this routine with students, USE the CHECKLIST on the left side of the problem as a way to help organize the thinking process

- **READ to Understand:** Begin by having students discuss the question being asked. At this time, do NOT focus on the math calculations required or the answer. This step is designed for students to understand the context of the question (What is the gist of the question?)

- **DECIDE**: Pair or group students. Using a consistent pairing will make this routine more fluid so you do not have to take time to pair students every time you want them to discuss. Have students discuss the question and discuss the question and decide which solution is correct (note: partners may not agree and that is fine provided they can justify their own thinking).

- **DRAFT**: Students draft a statement about their ideas (either as a group or individually and it can be written or oral – teacher's choice)

- **DEFEND**: Students share their ideas and defend their reasoning with the whole group. Encourage active listening and accountable talk.

- **RELECT**: To further develop comprehension, have students use ONE of the sentence starters on the "Reflect on Learning" slide after they have discussed and listened to new ideas with classmates.

NOTE: This is the CCPS adaptation of the original Decide and Defend protocol

DECIDE & DEFEND

Calvert County
Public Schools

Use the NEXT SLIDE with students.

Here is are some possible responses. This list is not all-inclusive. Additional ideas encouraged!

Would You Rather?

Would you rather have 364 jelly beans and give away 209 or have 281 jelly beans and give away 137 of them?

Some students may choose to give away more because they are generous or because they don't like jellybeans. Be sure to ask WHY they made their choice. Keep the understanding of the math at the front of the conversation. Encourage discussions about the process they used: Did they start at 188 and add up to 364? Did they subtract using place value understanding? Did they simply use the algorithm? How are all of these strategies related to one another?

$364 - 209 = 155$
$281 - 137 = 144$

Calvert County Public Schools

TEACHER NOTES

BEFORE
This slide has the String of expressions that you will use for today's Number Talk. You can use Smart Ink, right click for PowerPoint Pen, or convert this slide to Smart Notebook so you can easily annotate on the slide. The annotation is an important part of the routine. The expressions should be presented one-at-a-time with skills building on one another. Remember, students will come with a wide variety of strategies. Allow student sharing of these strategies and work toward determining which of the ways were most efficient and brain-friendly.

DURING
Making Landmark or Friendly Numbers
Landmark or friendly numbers are numbers that are easy to use in mental computation. Students may adjust one or all addends by adding or subtracting amounts to make a friendly number. Multiples of ten, one hundred, one thousand, and so on, as well as twenty-five and fifty, are examples of numbers that fall into this category.

Example: 58 + 36
              58 + (2 + 34)
              (58 + 2) + 34
              60 + 34
              94
              so 58 + 36 = 94 (be sure to conclude by bringing the routine full circle back to the ORIGINAL problem presented and its solution)

AFTER
After doing the Number Talk String, be sure to highlight this strategy and encourage students to "look for" places they can use it throughout the day.

Directions for OPEN NUMBER LINE routines

If you have never watched, or haven't watched it recently, we encourage you to watch the video that models how to use and interactive number line. https://www.youtube.com/watch?v=p8nssffnHkM&feature=youtu.be

Teacher Note: You may want to create an interactive number line in your classroom for some of the Open Number Line routines. The slides provided can be used as teacher reference or used interactively if this file is "printed" as a Smart Notebook file.

For more Open Number Line Activities, visit http://www.MathSnack.blogspot.com

Calvert County
Public Schools

Use the NEXT SLIDE with students.

Here is are some possible responses. This list is not all-inclusive. Additional ideas encouraged!

Find the midpoint on the number line below.

254   ?   300
Find the midpoint on the number line.
Example: The actual midpoint is 277, the difference between 300 and 254 is 46. Half of 46 is 23, so the midpoint is 277 (254 +23 = 277 and 300 – 23 = 277).

Find the midpoint on the number line below.
Be ready to explain your strategy.

254   ?   300

Calvert County
Public Schools
Directions for QUICK COUNT routines

Quick Count is an instructional routine designed to shift attention away from mindless calculations and toward necessary structural interpretations of mathematics. This routine fosters structural thinking, Math Practice 7, and promotes student discourse.

1. Pair students into Numbered Heads (or Peanut Butter Jelly partners, etc.)
2. Show students the first image slide for about 3-5 seconds depending on the complexity of the image and level/experience of the students.
3. With their partner, students discuss everything they can remember about the image.
4. After a minute of partner discussions, have students share ideas to the group.
5. Create a list of student ideas that students can refer to when the image is shown again.
6. Tell students that you are going to put the slide back up. Ask students to COUNT the images using some type of shortcut strategy (chunking, symmetry, arrays…)
7. Show the image again and leave it displayed as students look for counting shortcuts.
8. With their partner again, students discuss how many objects are in the image and how describe the shortcut counting strategy they used. Give time for partner discussions. Walk around and take notes about discussions to determine which students will share.
9. Use the slide with identical images as a comparative visual as students take turns explaining how they counted the objects in the image.
   • Use your notes to select different students with different approaches.
   • The student explains his/her shortcut as the teacher **gestures** over the image.
   • A **different student** is asked to **REPEAT the original student's shortcut** as the teacher **annotates** (circles, underlines) on the image to show the shortcut used.
   • Repeat the process using 3 different student-generated shortcut strategies.
10. End by asking students to explain what was "mathematically important"

About the SAME BUT DIFFERENT Routine

Same But Different is a powerful routine for use in math classrooms. The *Same but Different* routine compares two things **calling attention to <u>both</u> how they are the same <u>and</u> how they are different**. This apparent paradox is the beauty of the activity. In this analysis, *instead of making a choice and trying to prove that these are the same or prove that they are different, **students consider how two items can be <u>both</u>***. This is a critically important distinction from many other tasks.

One of the reasons students struggle in math is that they struggle to make connections. Someone who has poorly developed number sense might see each number as its own thing, and not part of the larger network of mathematical ideas. A mathematical conversation using the language *same but different* that calls attention to how a new concept in math is the same as another familiar and comfortable concept but different in a specific way is a useful conversation in growing a student's network of connections. Building these connections could also reduce anxiety as children become the sense-makers in the conversation.

Source: www.samebutdifferent.net.com/about

## Facilitating the SAME BUT DIFFERENT Routine

1. Present the slide
2. Ask students to THINK about how the two items are both the SAME AND DIFFERENT.
3. Do not allow conversation at this time -- give ample think time for students to consider the possibilities
4. After some time has been given (a minute or so), ask students to talk with their Number Head partner or small group about their ideas -- allow this conversation to dominate the time dedicated to this routine
5. As students talk with partners/groups, walk around and listen to the conversations. Resist jumping in; let them grapple with the ideas with their peers.
6. As you walk around listening, take notes. You will use these notes to help direct the whole group conversation.
7. Refocus student attention to the front of the room for a whole group debriefing session. Ask students to share some of their ideas about how the two were both the SAME and DIFFERENT – use the notes you took to bring out important ideas that will benefit the entire room.

SAME BUT DIFFERENT

WHICH ONE DOESN'T BELONG?

A

B

C

D

"Three of the clocks _____...."
Calvert County Public Schools

Count by 3s beginning with 342

BEGIN WITH NUMBER: 342
COUNTING RULE: add 3
GOAL:
- Find PATTERNS within the counted numbers.
- Use those patterns to PREDICT numbers that will appear later in the counting sequence.

CHART: As students choral count, chart their responses – this will give them a visual while counting AND will prompt great discussion when finished counting. **Be sure to write the numbers aligned as shown below to make the patterns more visible.**

Ask: What patterns do you notice when you look at the numbers that we counted?

342 345 348 351 354 357 360 363 366 369
372 375 378 381 384 387 390 393 396 399
402 405 408 411

Possible Patterns to Notice
- Each row below increases by 30 when compared to the number directly above it (why do you think that is true? Because we are counting by 3s and there are 10 numbers on each row, so 3x10=30)
- Each column ends in the same number
- Two rows have the same 100s place value
- The diagonal increases by 33 when you go down left to right. It increases by 27 when you go down right to left. (Why do you think that is true?)

**NOTE: You may not be able to write small enough on the lines provided on the next slide. It is important that numbers are charted 10 across for students to easily see the pattern; use your whiteboard or chart paper turned lengthwise if needed.

CHORAL COUNTING

Count by 3s – starting on 342

342 ____ ____ ____ ____ ____ ____ ____ ____ ____

____ ____ ____ ____ ____ ____ ____ ____ ____

____ ____ ____ ____ ____ ____ ____ ____ ____

____ ____ ____ ____ ____ ____ ____ ____ ____

Use the NEXT SLIDE with students.

Here is are some possible responses. This list is not all-inclusive. Additional ideas encouraged!

NOTE: Unlike many of the Estimation activities, this one is not animated and is best done in Smart Notebook to allow for annotations.

A common mistake that students make is to round the sum rather than estimate the sum.
When estimating, students should NOT find the exact sum and then just round up/down; rather, students should make broad MENTAL calculations.
This sum can be thought of as 5800 + 900 or 6000 + 900 or 6000 + 1000.
**Discussing the benefit of each estimate could be a powerful Number Sense building discussion.**

DO NOT get in the habit of then calculating an exact solution which will lead students to believe that they will need an exact solution every time rather than the estimate that was indicated. Spend time on the reasoning used with each estimate. Remember, it is an estimate, so there will be more than one correct estimate. Students who estimated using 6000 + 1000 = 7000 should be able to explain that the answer would be close to but less than 7000 since both numbers were rounded UP to the next thousand making the solution must less than the estimate. Be sure to allow students to talk through their reasoning.

ESTIMATION

# **Estimate** the sum

5,823 + 863

Use the NEXT SLIDE with students.

Here is are some possible responses. This list is not all-inclusive.
Additional ideas encouraged!
Have students find the midpoint on the number line and share their reasoning.
Example: The midpoint is 800. The difference between 875 and 725 is 150.
Half of 150 is 75, so the midpoint is 800 (725 +75 = 800 and 875 – 75 = 800).

Find the **midpoint** on the number line below.
Be ready to discuss the strategy you used.

725   ?   875

Esti-Mystery

Estimation Activity with clues!

NOTE: This Estimation routine contains a number chart. Have students determine which numbers should be eliminated BEFORE clicking to reveal the number chart after each clue.

Students use clues to solve the estimation mystery. After all clues are revealed, students will have enough information to determine if their initial estimate was correct.

Clues are revealed one at a time with time to discuss and refine original estimates after EACH clue is revealed. No one should be stuck with their original estimate – encourage mindful refinements.

Students may benefit from using paper and pencil to work through possibilities or consider creating a class chart where possibilities are added and crossed off as each clue is revealed.

PROTIP: Use a number chart in a dry erase sleeve for students to track the numbers that are/are not possible.

ESTIMATION

Calvert County
Public Schools

How many foam peanuts are there?

As the clues appear, use the information to narrow the possibilities to a smaller set. After each clue, use estimation again to determine which of the remaining answers is the most reasonable.

Write down your first estimate. After each clue, you'll see if your estimate is still a possibility. After each clue, if it is no longer possible write down a new estimate – and be prepared to explain why you chose it.

Calvert County
Public Schools

Clue #1
There are more than 9 pieces.
You can't see all of the pieces.

Clue #2
There are less than 16 pieces.

Clue #3
The answer is a multiple of 3.

Clue #4
The answer is not a multiple of 5.

Calvert County
Public Schools

After seeing the clues, you have narrowed the possibilities to a small set of numbers or perhaps even a specific number. Before you see the answer, select your final estimate. Write it down and explain to someone why you chose that number.
