

Prekindergarten

NUMBER SENSE' Routines

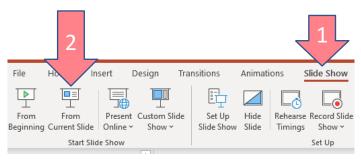

HOW TO RUN POWERPOINT IN SLIDE SHOW MODE:

Slides with animation features, must run in Slide Show mode of PowerPoint for the animations to work correctly.

- 1. Select <Slide Show> from the menu at the top
- 2. Select <From Current Slide>

HOW TO ANNOTATE STUDENT THINKING ON THE SLIDE:

- With the slide in Slide Show mode, right click on the slide
- Select <Pointer Options> then choose <Pen>

180 Days of Number Sense Routines

How to facilitate More or Less

For this routine, students will determine which of the images shows "more" or "less" or if the two images show "equal" values.

To facilitate this routine,

- 1. Show the two images.
- 2. Ask the question shown on the slide.
- 3. Allow students to discuss their ideas with a partner first (this gives them time to gather their ideas and allows all students an opportunity to talk).
- 4. Ask a few students to share their ideas with the whole group.

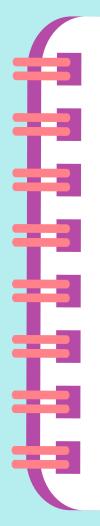

More or Less

More or Less

How to facilitate Same But Different

At the start of this routine, students are shown two images. They are asked to identify not only the attributes that are the SAME between the two objects, but also the attributes that are different. This routine helps build students' grayscale thinking where things do not have to be all one or the other, they can be both at the same time.

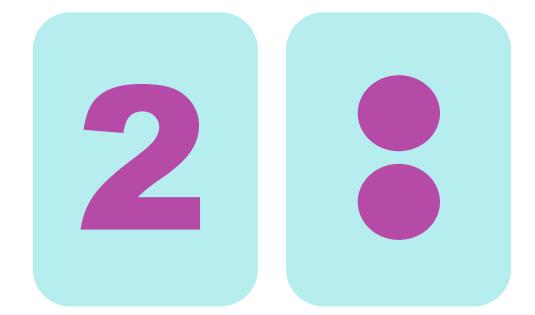

To facilitate this routine,

- 1. Ask your students to think about what is the same about the two objects AND what is different. If scaffolding is needed, you can ask them to first think about how the objects are the same. Discuss. Then ask how the objects are different. Discuss.
- 2. Ideally, students will state how they are same and different in one sentence: For example, when shown a hula hoop and dinner plate, the student may respond, "They are both <u>round</u> but one is a toy, and the other is a dish."

Same But Different

ASK: How are these two images the SAME but DIFFERENT?

Same But Different

How to facilitate Copycat

This routine supports students' ability to recognize and replicate patterns. As the year progresses, this routine will increase in rigor by only showing the image for a short amount of time and then asking students to replicate the pattern from memory.

To facilitate this routine,

- 1. Show the image or play the recording for auditory patterns.
- 2. Ask, "How many are in the pattern?"
- 3. Ask students to replicate the pattern.

 The pattern may require physical blocks, clapping and tapping, or a verbal description of the pattern.
- 4. If the pattern was hidden after showing it for a short time, reveal the pattern again so students can compare their pattern to the original pattern.

Copycat

SAY: Look at these frogs. How many do you see? [click] Which set has the SAME number of frogs? How do you know? [click to reveal the correct set]

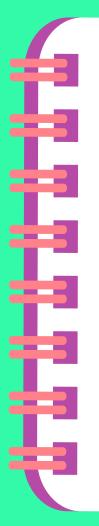

Copycat

How to facilitate Clue by Clue

During this routine, students are shown a group of objects. Then they are given clues about the object's attributes that helps them to narrow the possibilities down to just one possible object from the group.

To facilitate this routine,

- 1. Show the group of objects to your students.
- 2. Tell students that you are thinking of ONE of these objects and you will give them clues to help them discover which object you are secretly thinking about.
- 3. Reveal the first clue. Ask students to think about which objects could be your mystery object. Which objects cannot be the mystery object. Discuss.
- 4. Use the annotation tool to visually mark off objects that do not fit the clue. In Slide Show mode, right click to annotate on the slide. Select >Pointer Options>Pen. Cross off images as students determine it does not fit the clue. The answer is revealed after Clue 3 is shown.

Clue by Clue

ASK: Can you use the clues to guess which bird I am? FOCUS: Vocabulary development (BELOW, ON, NEXT TO)

Clue 1
I am BELOW
the bird nest

Clue 2
I am ON
a tree branch

Clue 3
I am NEXT TO
the kite

Clue by Clue

How to facilitate Measure Mix

This routine is designed to build vocabulary specific to the measurable attributes of objects. In addition to these routines, the foundation of these understandings must come from experiences with real objects to explore heavier/lighter, longer/shorter, etc.

To facilitate this routine,

- 1. Show the image on the slide (up to 3 objects will be presented)
- 2. Ask the question shown on the slide. The question will focus on a single measurable attribute (weight, length, height).
- 3. Allow students to discuss their ideas with a partner first (this gives them time to gather their ideas and allows all students an opportunity to talk).
- 4. Ask a few students to share their ideas with the whole group.
- 5. Prompt students to also answer the question "How do you know?"

Measure Mix

SAY: Which is the longest? The dump truck, the semi-trailer, or the car? How do you know? [discuss] FOCUS: Length

Measure Mix

How to facilitate Example - Not Example

In Slide Show mode, right click to annotate on the slide. Select > Pointer Options > Pen. Circle the images that students think will move to the Example Ring.

Objects will move when you click the mouse. The items you circled, should move.

Discuss as appropriate. Focus on the like characteristic of the items in the Example Ring.

This routine may be presented in one of two different formats:

Format 1:

- 1. Students will be given a single focus category (i.e., Rectangles / Not Rectangles).
- 2. Students will be asked to sort objects into groups. One group should contain the objects that are EXAMPLES of the category, and the other group contains objects that are NOT EXAMPLES of the category. Discuss student reasoning throughout the routine. [NOTE: The objects in the slides are NOT drag and drop. After the discussion, all objects will move when the slide is advanced].

Format 2:

- 1. Students will be shown a group of objects.
- 2. The class decides on ONE category [i.e., round things]
- 3. Discuss which items should be moved into the Example Ring.
- 4. Circle the objects that belong in the ring.
- 5. Erase the drawn circles and have students name a different category. Repeat the process.
- 6. As the slide is advanced, SOME of the examples will be revealed.

Example - Not Example

ASK: Which of these numbers represent 4? [circle student choices – allow for self-correction as needed]. After discussing/sorting the images, click for animation.

ASK: Do more of the models represent 4 or not 4?

not 4

Example - Not Example

How to facilitate Where Does It Go?

This routine is designed to build sequencing skills, mathematical reasoning, and vocabulary.

To facilitate this routine,

- 1. Show students the slide (some will be animated) and ask students to think about where the target object might go.
- 2. After some think time, call on a student to share their idea. Do not acknowledge if the idea is correct or incorrect (yet!).
- 3. If the student does not offer an explanation, prompt the student by asking, "How do you know?" (yes, ask even if the answer they provided is not accurate students will often self-correct when prompted to explain).
- 4. Call on another student and repeat Step 4. After several students have shared their ideas, reveal the correct solution (and celebrate!).

Where Does It Go?

ASK: These baby chicks hatched from the same nest. Which nest matches the number of chicks? ASK: How do you know?

Where Does It Go?

How to facilitate Would You Rather?

For this routine, you will notice that there isn't a single right answer. The goal is for your young mathematicians to develop math-related vocabulary that allows them to articulate their ideas and support their choice. Focus on the mathematical attributes, not on a single answer.

To facilitate this routine,

- 1. Ask your students, "Would you rather have "this" or "this"?

 Tell them each to think about the reason why they picked that one.
- 2. Then have your students share their ideas with a partner (this allows them time to practice and gives everyone a chance to talk).
- 3. Next have a few students share their choice and the reason they made that choice with the whole group.

Would You Rather?

ASK: Which plate of cookies would you rather have as a snack? Why did you choose that plate of cookies? FOCUS: The focus is concept development of more/less, quantities of one and three, composite mass of whether three cookies is greater than/less than/equal to one larger cookie. Actual mass of the cookies is not explored here.

Would You Rather?

How to facilitate One More One Less

For this routine, students will determine what is ONE more or ONE less than a given value using visual images as cues.

To facilitate this routine,

- 1. Show the image.
- 2. Ask the question shown on the slide.
- 3. Allow students to discuss their ideas with a partner first (this gives them time to gather their ideas and allows all students an opportunity to talk).
- 4. Ask a few students to share their ideas with the whole group.
- 5. Prompt students to also answer the question "How do you know?"

One More One Less

ASK: How many birds are ON the fence? If ONE bird flies away, how many birds will be left sitting on the fence? TIP: Write the counting numbers below each bird as you count the birds aloud together.

Photo by Shannon Kringen

One More One Less

ASK: How are these two images the SAME but DIFFERENT?

FOCUS: The focus is vocabulary development of tall/short, heavy/light, big/small.

Students may recognize that these terms are relative - the baby giraffe is light compared to the momma giraffe but would be heavy compared to a kitten.

Image Source: National Geographic

Same But Different

ASK: Can you use the clues to guess which object I am? FACILITATION NOTE: Use the annotation tool to mark off images that do not fit the clue.

Clue 2 I can roll

Clue 3
I have two flat
sides

Clue by Clue

ASK: Which of these shapes are triangles? [circle student choices – allow for self-correction as needed]. After discussing/sorting the shapes, click for animation.

ASK: Are more of the shapes triangles or not triangles?

triangles

not triangles

Example – Not Example

ASK: This is Jeremy (blue shirt) and his friends Mica and Rose. Which friend is the shortest? [discuss] ASK: Which friend is the tallest? [discuss]

Measure Mix

ASK: Which image has LESS gnomes? How do you know?

More or Less

ASK: How many turtles are on the log? If ONE turtle jumps into the water, how many turtles will be on the log? TIP: Write the counting numbers below the turtles as you count them aloud together.

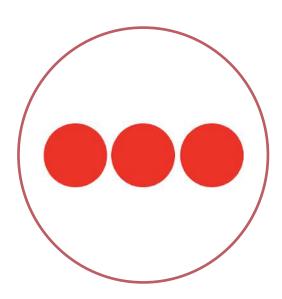

One More One Less

ASK: How are these two images the SAME but DIFFERENT?

Same But Different

SAY: The cat is sitting BESIDE the table. Which rug did the cat choose?

Day 57

Where Does It Go?

ASK: Which ladder would you rather use to pick an apple from the apple tree? FOCUS: The focus is vocabulary development of short/tall and big/small. There is no single correct answer.

Would You Rather?

FOCUS: Subitizing within 3.

Students do not have to one-by-one count to "know", although some may need to count.

3 insects

not 3 insects

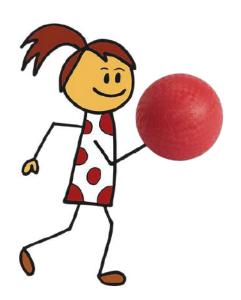

Example - Not Example

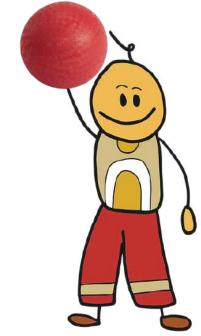

PREP: Give students a small pile of counters to push forward with each bounce of the ball. Or just use fingers. ASK: How many times does the basketball bounce? Listen carefully. Count the bounces [click to hear the ball bounce]

SAY: Let's listen again. Use your fingers (counters) to help you count the number of bounces.

[click to hear the ball bounce again] Click

Discuss.

Copycat

Many THANKS!
