TASKS FOR PAYS 11 - 16

Day II Factoring Special Products of Polynomials: Perfect Squares & Differences of Squares

Objective: The learner will be able to factor the difference of two squares & the learner will be able to factor perfect square trinomials.

Task: Read over provided notes & complete the handout *"Perfect Square Trinomials & Difference of Squares"* For additional examples and explanations, refer to pg. 372 examples 1 & pgs. 398 – 399 examples 1 - 3 in your textbook.

Day 12 Factoring Special Products of Polynomials: Perfect Squares & Differences of Squares continued

Objective: The learner will be able to factor the difference of two squares & the learner will be able to factor perfect square trinomials.

Task I: Read over provided notes from Day II

Task 2: Complete the matching cut & paste Tarsia Jigsaw

For additional examples and explanations, refer to pg. 372 examples 1 & pgs. 398 - 399 examples 1 - 3 in your textbook.

Day 13 Factoring Polynomials by Grouping

Objective: The learner will be able to factor a polynomial by grouping.

Task I: Read over provided notes & complete the handout "Gridwords: Factoring by Grouping #3"

For additional examples and assistance, refer to pg. 404 example I in your textbook.

Days 14 & 15 Factoring Polynomials Completely

Objective: The learner will be able to factor a polynomial completely, using any previous factoring method. Task I: Read over provided review template & complete the *"Zombies! Factoring Polynomials: Survive the Zombie Apocalypse" Flip Book*

For additional examples and assistance, refer to pg. 405, examples 2 & 3 and all previous factoring sections in your textbook.

Day 16 & 17 Brain Break Scavenger Hunt

Task I: Complete the scavenger hunt. Have fun!

-Remember you must show all work for each assignment to earn credit!

If additional practice is needed, I encourage you to find lessons on IXL to practice. Logon through your Clever account. In the IXL search bar, search for lessons using the title of the day, such as "adding & subtracting polynomials" and pick an Algebra I lesson. Finally, work through questions until you get a Smart Score of 80!

Lastly. For all textbook references & assignments, you should have an issued textbook at home or you can utilize your online textbook (Big Ideas Math).

Day 11: Factoring Special Products of Polynomials FACTORING PERFECT SQUARES & DIFFERENCE OF SQUARES NOTES

In this section, we will learn about special products of polynomials. There are three types of specials products.

	Perfect Square	e of a Binomial (Sum)	
Form for a Perfect Square of a Binomial (sum) $(a + b)^2$ $= a^2 + 2ab + b^2$	Notice that in the end result, you will have a perfect square for both the first and last terms of the polynomials and your middle term is twice the product of the first and last term. Therefore, producing +2ab	What you can conclude is when given a polynomial that fits the pattern $a^2 + 2ab + b^2$, Where a & b are both perfect squares, and you can produce the middle term by multiplying a & b (the square roots of those perfect squares) by 2, the factorization will be $(a + b)^2$	Example: $144m^2 + 264x + 121$ $a^2 = 144, b^2 = 121$ Notice, both numbers are <i>perfect squares.</i> This should be a red flag! Take the square root of each number, $\sqrt{144} = 12 & \sqrt{121} = 11$ This means $a = 12, b = 11$ Now, test if 2ab = your middle term. 2ab = 2(12)(11) = 264 Perfect! Now setup the factorization from this form (a + b) ² Where, a = 12 & b = 11 (11m + 12) ²

Perfect Square of a Binomial (Difference)				
Form for Perfect Square of a Binomial (Difference) $(a - b)^2$ = $a^2 - 2ab + b^2$	Notice that in the end result, you will have a perfect square for both the first and last terms of the polynomials and your middle term is twice the product of the first and last term. Therefore, producing -2ab	What you can conclude is when given a polynomial that fits the pattern $a^2 - 2ab + b^2$, Where a & b are both perfect squares, and you can produce the middle term by multiplying a & b (the square roots of those perfect squares) by 2, the factorization will be $(a - b)^2$	Example: $w^2 - 18w + 81$ $a^2 = 1, b^2 = 81$ Notice, both numbers are perfect squares. This should be a red flag! Take the square root of each number, $\sqrt{1} = 1 & \sqrt{81} = 9$ This means $a = 1, b = 9$ Now, test if 2ab = your middle term. 2ab = 2(1)(9) = 18 Perfect! Now setup the factorization from this form (a - b) ² Where, a = 1 & b = 9 *Remember subtract in this factorization!* $(w - 9)^2$	

Difference of Squares Binomial				
Form for a Difference of Squares Binomial (a + b) (a - b) $= a^2 - b^2$	Notice that in the end result, you will have a perfect square for both the first and last terms of the polynomials and there is no middle term .	What you can conclude is when given a polynomial that fits the pattern $a^2 - b^2$, Where a & b are both perfect squares, and there is no middle term, the factorization will be (a + b)(a - b)	Example: $16x^2 - 25$ The first red flag here should be that you have no middle term! Now, check if the two terms you have are perfect squares. $a^2 = 16, b^2 = 25$ Both numbers are <i>perfect</i> <i>squares</i> This is your second red flag that you have a difference of squares Take the square root of each number, $\sqrt{16} = 4 & \sqrt{25} = 5$ This means $a = 4, b = 5$ Now setup the factorization from this form $(a + b) (a - b)$ Where, $a = 4 & b = 5$ (4x + 5) (4x - 5)	

So, what can you take from this chart?

We need to remember these patterns in our polynomials! When given perfect squares as the first and last term of a polynomial, we must check if that middle term follows one of the three given guidelines for a special solution. This will allow you to quickly determine the factorization of the polynomial!

If you're still feeling confused, follow these helpful steps:

STEP 1: You notice that the first and last terms might be perfect squares. Take the square root of each number. If you have a perfect square, move onto step 2. The two answers you have are your values of a & b for the following steps.

If you do not have two perfect squares, factor as usual.

STEP 2: Determine if the term in place of "b" can be found by multiplying a, b, and 2. If you found b using this method, great! Move on to step 3. If not, factor as usual.

SIDE NOTE- if you do not have a middle term, skip to step 3.

STEP 3: Setup your factorization using the values of a & b from step l.

If there are three terms, you have either a sum or difference of a PERFECT SQUARE.

 $(a + b)^2$ or $(a - b)^2$

*To determine, whether you have a sum (+) or

difference (-), look at the original polynomial you

were given. If ${\sf b}$ is positive, you have a sum. If ${\sf b}$

is negative, you have a difference.

If there are only two terms (you're missing the middle term), you have a DIFFERENCE OF SQUARES.

(a + b) (a - b)

There ya go! Now give it a shot!

Perfect Square Trinomials, Difference of Squares

6. (x-3)(x+3)

Warm-Up:

Multiply the binomials and look for patterns

- 1. (x-1)(x-1) 5. (x-1)(x+1)
- 2. (x-3)(x-3)
- 3. (2x y)(2x y) 7. (x 1)(x 6)
- 4. (2ax b)(2ax b)8. (2x - 3y)(2x - 3y)

Ex. 1 Multiply these expressions. Describe any patterns you observe.

- 1. (x-1)(x-1) 3. (2x+y)(2x+y)
- 2. (x+3)(x+3) 4. (2ax+b)(2ax+b)

Perfect Square Trinomial $(a + b)(a + b) = (a + b)^2 = a^2 + 2ab + b^2$ $(a - b)(a - b) = (a - b)^2 = a^2 - 2ab + b^2$ Both expressions have three terms: the square of a, twice a times b, and the square of b.

Ex. 3

Multiply these expressions and describe any patterns you observe 1. (x-1)(x-1)3. (x+6)(x+6)

2.
$$(x-3)(x-3)$$
 4. $(2x+y)(2x+y)$

	Difference of Squares
	$(a + b)(a - b) = a^2 - b^2$
The exp	pression $a^2 - b^2$ has two terms: the square of a and the square of b.

Ex. 5

Identify each expression as a perfect square trinomial, difference of squares, or neither. Factor (unless its neither).

1. $x^2 + 2x + 1$	5. $x^2 + 4x + 1$
2. $y^2 + 4y + 4$	6. $9x^2 + 25$
3. $x^2 - 5x + 25$	7. $y^2 + 2yz + z^2$
4. $4x^2 - 25$	

DAYS 12 & 13: Factoring Special Products continued

Using your notes from yesterday, you are going to complete a Tarsia Jigsaw. This Jigsaw puzzle is a mixture of the factoring you have done in previous sections (think days 7-10), as well as factoring perfect square and difference of squares polynomials.

Tarsia Jigsaw Directions:

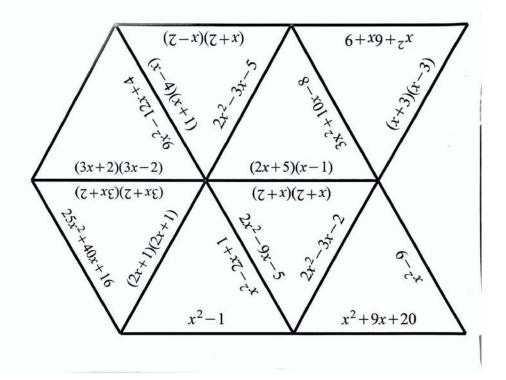

#1 Cut out each of the triangles. As you cut out the triangles, notice that each triangle has a mixture of polynomials and binomials. Polynomials are the questions and the binomials being multiplied are the answers in steps to come.

#2 Factor each polynomial within the given triangles. Show your work, whether on the back of the triangle or on a separate sheet of paper. Then transfer the answer only above/below the polynomial on the front of the triangle.

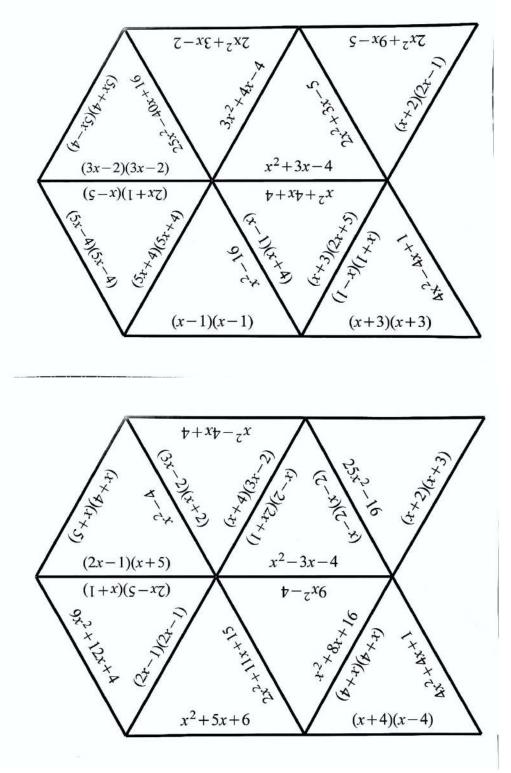

#3 Match the answers to your polynomials to the answers on OTHER triangles. As you match these, the question polynomial & the answer binomial should be touching.

#4 Once you have found each match and placed the triangles side by side, you should notice you have a shape. Once this is complete, glue/tape your triangles to a piece of paper.

#5 Feel free to color and decorate as you go!

HINT - YOUR END RESULT SHOULD BE A HEXAGON

FACTORING POLYNOMIALS BY GROUPING NOTES

In this section we will be learning how to factor polynomials with four terms. Before today, you have only been factoring trinomials, so let's look at how to factor a polynomial if you have four terms!

Before we begin, recall our section when we factored out the GCF of a polynomial, that skill will be used again with this section. So, let's give it shot.

Given the polynomial, $x^3 + 4x^2 + 2x + 8$, we are going to factor using a grouping method. How do we do this? I want you to see if you can take this polynomial of four terms and make two groups of two terms by a common factor.

$$(x^3 + 4x^2) + (2x + 8)$$

I grouped the first two terms and the second two terms, because I noticed each have a factor in common.

I see that between $(x^3 + 4x^2)$ there is a common factor of x^2 . I see that between (2x + 8)there is a common factor of 2.

Now, that I have these terms **grouped** by a common factor, I am going to factor out the identify common factor.

 $(x^{3} + 4x^{2}) + (2x + 8)$ $x^{2}(x + 4) + 2(x + 4)$

Do you notice, how after I factored out the identified GCF, both binomials remaining are (x+4)? That's a good sign that this was completed correctly!

Next step is to factor out that common binomial (x + 4) $\frac{x^2(x + 4) + 2}{(x + 4)}$ Notice, as I factor those out all that remains is a sum of the factored GCFs. $(x+4)(x^2 + 2)$

And, there you go! $(x+4)(x^2+2)$ is the answer!

Let's try this again, with identified steps!

 $\begin{array}{r} 18y^2 + 21y + 30yz + 35z \\ \text{Step 1: Group terms by a common factor (the GCF)} \\ (18y^2 + 21y) + (30yz + 35z) \\ \text{Step 2: Factor out the GCF} \\ (18y^2 + 21y) + (30yz + 35z) \\ 3y(6y + 7) + 5z(6y + 7) \\ \text{Step 3: Factor out the common binomial} \\ (18y^2 + 21y) + (30yz + 35z) \\ 3y(6y + 7) + 5z(6y + 7) \\ (6y + 7)(3y + 5z) \end{array}$

There ya go! The answer is: (6y + 7)(3y + 5z)

K -e -- x 2+ E 2 x Coovright 2015 Math Giraffe Factor each expression. Be careful to factor completely - Some expressions have a greatest common factor. DAYS 14 & 15: Factoring Polynomials Completely FACTORING COMPLETELY REVIEW

In today's & tomorrow's assignment, you will be combining all of the factoring methods to survive a ZOMBIE APOCALYPSE!! You will solve a series of factoring polynomials problems as you tread your ways toward or away from the zombies! Remember, any method can be used. Be careful, one wrong turn and the zombies will get you! Good news though, if you try the problem again, you can save yourself. Good luck!

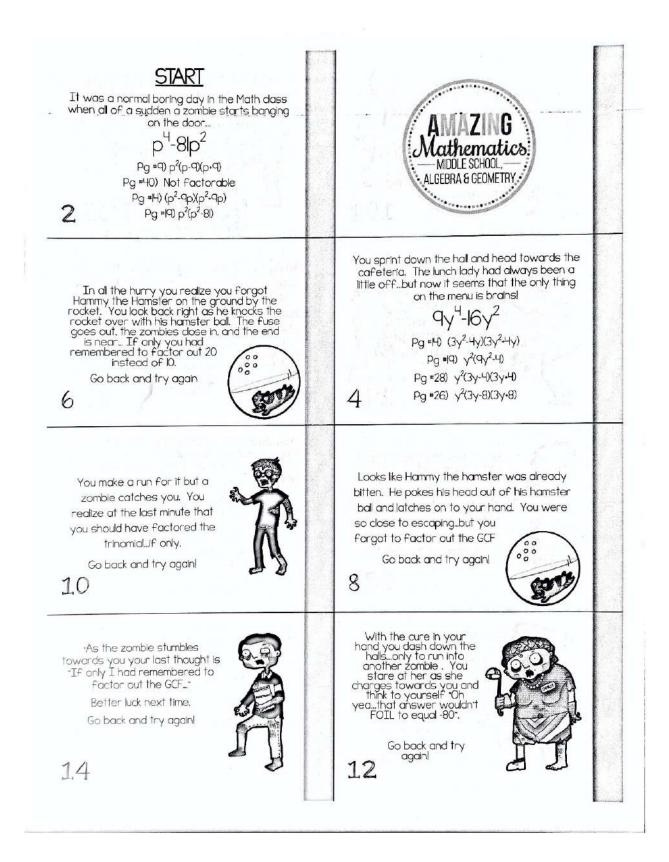

<u>Directions to create Flip Book</u> Cut out each book page (You'll notice the page numbers) Put flip book in order by page number Staple the left side Viola!

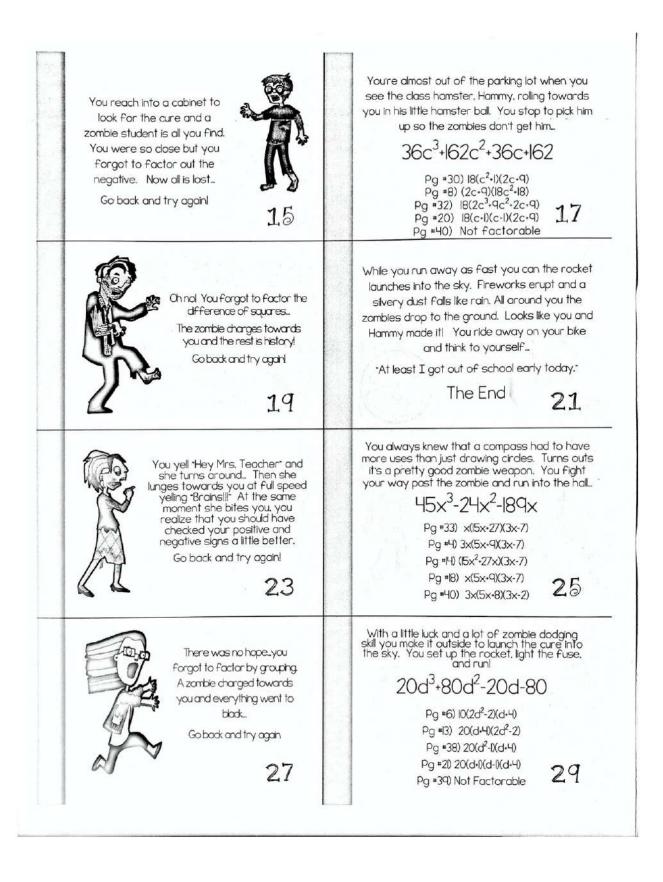

DIRECTIONS TO COMPLETE FLIP BOOK START ON PAGE 1! IF YOU DO NOT, YOU'LL OVERWORK YOURSELF.

AS YOU WORK, SHOW YOUR WORK ON THE BACK OF THE PAGE OR ON A SEPARATE SHEET OF PAPER. When you get an answer, you have answer choices on that page. If you do not see it, try again. If you do see your answer, skip to the page number indicated. This is similar to reading a Goosebumps book. You'll skip around!

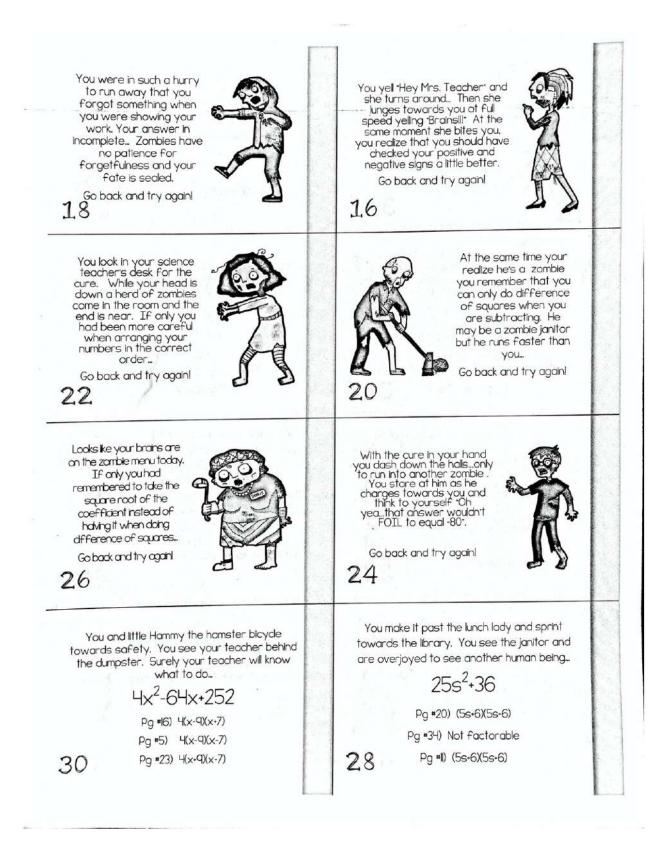

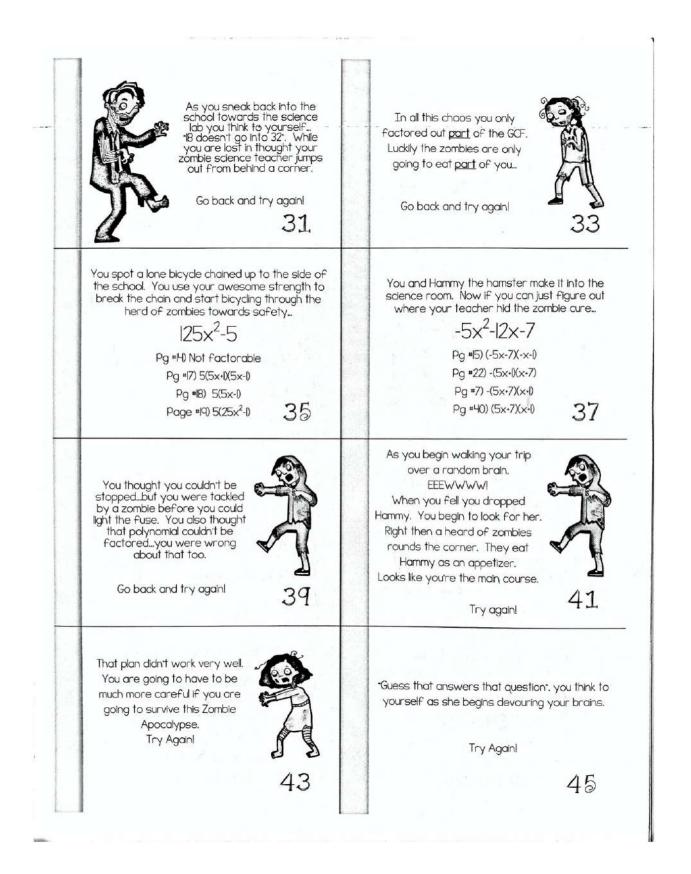

Please use the template that I have attached to complete the assignment. Also, use any previous notes and the textbook. Have jun!

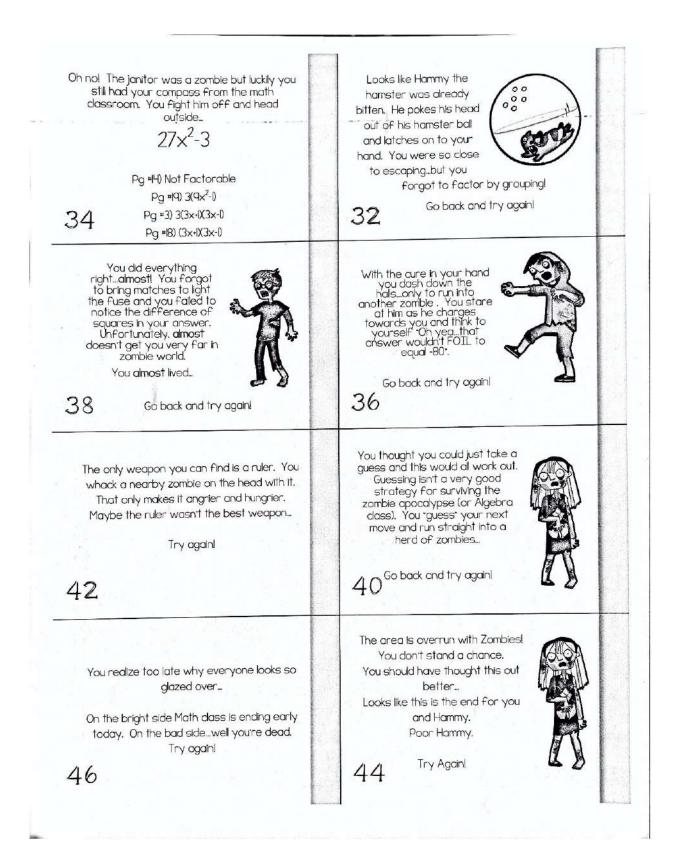

Start on page 2. Work through the given Factoring Polynomials problem. Go to the page that matches your answer. If your answer is correct you will Zombie Flip Book be taken to the next problem in the story. If your answer is incorrect you will be eaten alive by zombies and have to try again. Do everything right and you just might survive... Continue to work your way through the book until you reach the end of the story. 1 Good Luck! Your teacher has a plan... She will divert the zombies while you sneak back into the school. Rumor has it that your science Outside is no better! Looks like the zombie apocalypse wasn't just at the school. You look teacher was a super genius and had developed a zombie cure. There might still around for an escape route... be hope ... $-2x^{3}-24x^{2}-64x$ $32x^2 - 18$ Pg #33) -2(x3+12x2+32x) Pg =31) 18(x2-1) Pg #40) 18(x+1)(x-1) Pg #35) -2x(x+4)(x+8) Pg #19) 2(16x2-9) Pg #40) -2x(x-4)(x-8) Pg #37) 2(4x-3)(4x-3) 5 3 Pg =10) -2x(x2+12x+32) Pg #26) 2(8x-9)(8x+9) Luckily all those zombie apocalypse drills your Eurekal You find the cure. It's contained in school has been doing paid off. You barricade a model rocket. The only instructions are the door and look around the room for a zombie fighting tool. All you find is... "To kill zombies...launch and run." You head autside to launch the cure... 18m³-54m²-42m+126 24x²-80x+19 Pg =27) 6(3m3-9m2-7m+2) Pg #24) (3x-1)(8x-19) Pg #H) (18m2-42)(m-3) Pa =36) (8x-1)(3x-19) Pa =40) Not factorable 9 Pg #12) (8x-19)(3x-1) 7 Pg #25) 6(3m²-7)(m-3) Pg #29) Not Factorable Guessing really isn't a good option when picking answers or fighting zombies. You "Guessed' that the rocket fuse would light easily but it didn't. While you try to light the fuse the zombies enclose you in a circle...So close but yet so far. At the same time your realize he's a zombie you remember that you can only do difference of squares when you are subtracting. He may be a zombie janitor but he runs faster than you... Go back and try again! Go back and try again! (without guessing) 13 11

DAYS 16 & 17: Brain Break Scavenger Hunt!

QUARANTINE SCAVENGER HUNT

This assignment should be complete over a period of two days. The next school day is when your partner & you should focus on working on your Prezi presentation.

 \triangleleft

Ø

Quarantined scavenger hunt

You and a partner will complete a VIRTUAL scavenger hunt within your neighborhoods! Do <u>not</u> complete this hunt in person. This means you will FaceTime, Video through Messenger, Skype, Zoom, whatever app you so choose! If you cannot do this, because you don't have the electronic capability or prefer to work alone, that's fine. © So, let's get to it!

Task #1: Your partner & you will search your neighborhoods while maintaining social distancing rules to find the items listed below. It is okay if you these are in your house/yard also, <u>but</u> mix it up a bit! As you find the object, snap a picture on your cell phone & jot down where the item was found. Task #2: Your partner & you will make a Prezi (<u>www.prezi.com</u>) with your scavenger hunt treasures! (See Prezi expectations below) Task #3: Once you have completed this amazingly awesome Prezi, email it to me! (penni.powell@k12.wv.us)

Side Note: If you do not have computer/Internet Access, not to worry! I would like you to journal this assignment. So, keep a journal of what item you found, describe the item in detail, and where you found the item. Be creative in your journal!

Prezí Expectations

Títle page – Should ínclude a Títle, your name(s), Block number No more than two treasures per page The treasure should have a pícture, name, descríptíon of where ít was found, g who found the treasure

Scavenger Hunt Treasures to Find

A house with a black railing A blue car A plant in the window A trash bin Someone out for a walk A camper in a driveway A dog An electricity box A license plate that appears to spell out a word A house with a "9" in the number A bird A fire hydrant A house with no cars in the driveway A bicycle A porch with two chairs A license plate with the letter "A" An outside light turned on An open garage/shed door A basketball net A "for sale" or "sold" sign A black vehicle A wreath on a door Christmas lights A "Welcome" sign A house with more than three cars

Have fun!
