

Mathematics
Precalculus: B
Unit 1: Trigonometric Functions

Essential Understandings	▪ Trigonometric functions have many applications in the real world.
Essential Questions	▪ What are the different ways of describing angles? ▪ What is a unit circle and explain its relationship to real numbers? ▪ How are trigonometric functions evaluated? ▪ When are fundamental identities used? ▪ How are trigonometric functions graphed? ▪ What are inverse trigonometric functions? ▪ What real-life problems are modeled by trigonometric functions?
Essential Knowledge	▪ One radian is the measure of a central angle that intercepts an arc equal in length to the radius of the circle. ▪ A unit circle is a circle with a radius of one unit. ▪ Trigonometric functions of a unit circle with t as a real number and (x,y) be a point on the unit circle corresponding to t....$\sin t=y$, $\cos t =x$, $\tan t=y/x$, $\csc t=1/y$, $\sec t=1/x$, $\cot t=x/y$. ▪ The inverse of the sine function is $y = \arcsin x$ if and only if $\sin y = x$.
Vocabulary	▪ <u>Terms</u>: ○ Trigonometry, negative angles, central angles, linear speed, angular speed, unit circle, sine, cosecant, cosine, secant, tangent, cotangent, periodic, period, reference angle, amplitude, phase shift, inverse functions, radian, unit circle, co-terminal angles.
Essential Skills	▪ Describe an angle and convert between degree and radian measure. ▪ Identify a unit circle and its relationship to real numbers. ▪ Evaluate trigonometric functions of any angle. ▪ Use fundamental trigonometric identities. ▪ Sketch graphs of trigonometric functions. ▪ Evaluate inverse trigonometric functions. ▪ Use trigonometric functions to model and solve real-life problems. ▪ Change an angle from degree measure to radian measure. ▪ Use the unit circle to evaluate the six trigonometric functions of θ. ▪ Evaluate the six trigonometric functions at any real number. ▪ Evaluate the six trigonometric functions of any angle in radians or degrees. ▪ Sketch the graph of a trigonometric function. ▪ Sketch the graph of an inverse function. ▪ Model trigonometric relationships.
