File Management

It's important to keep your files all in one place and organized so that you can easily sort through them, etc.

Whenever you start a project, you need to make a project folder on your desktop.

If you move things like film clips, music files, etc, after you've already put them into Premiere Pro, they will go offline, so it's important to not move things after you've placed them in your project folder.

Opening Premiere Pro

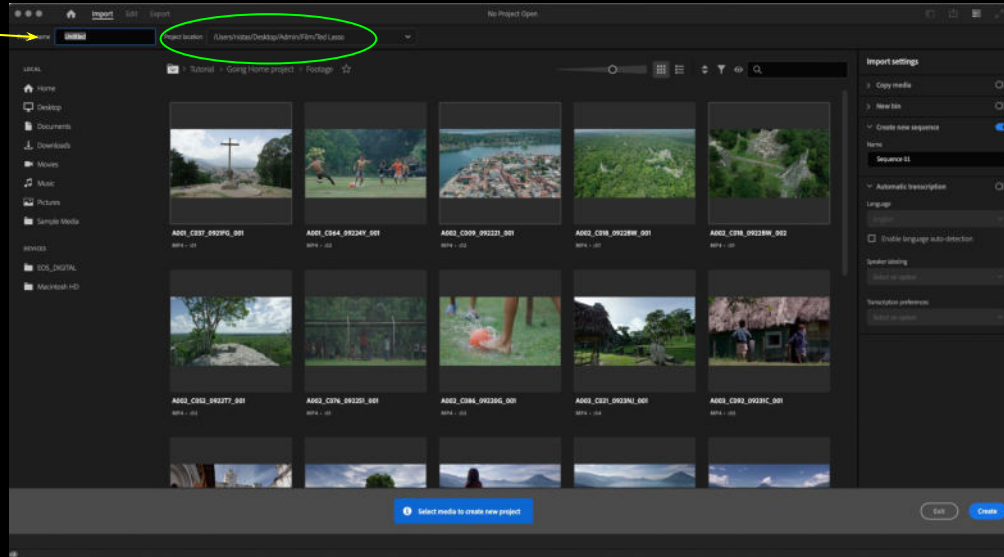

When you open Premiere Pro, if you are starting a new Project you can either go to **File** ➤ **New** ➤ **Project...** or you can click on the button **New Project**.

Creating a New Project

Make sure to choose your Project Files as the location for your project. Click on the drop down menu where **Project location** is to select the location of your video project, then navigate to the Desktop to find your Project Folder there.

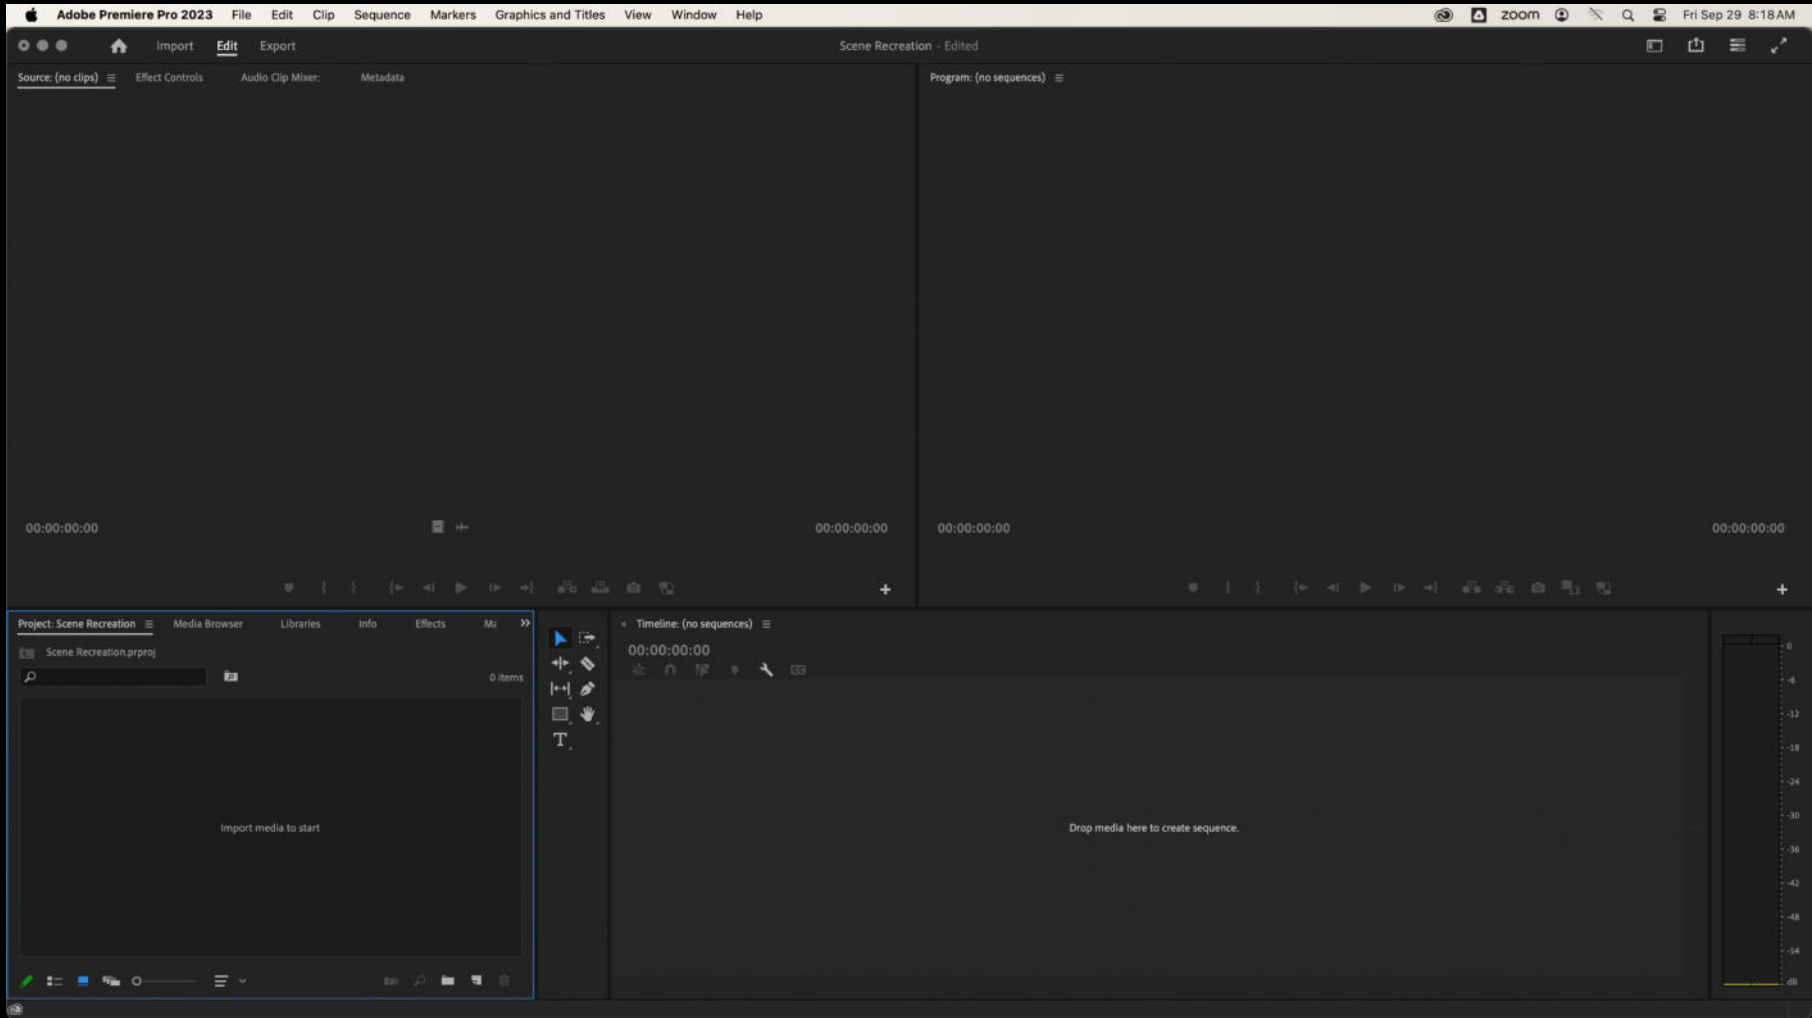

Name Your Project

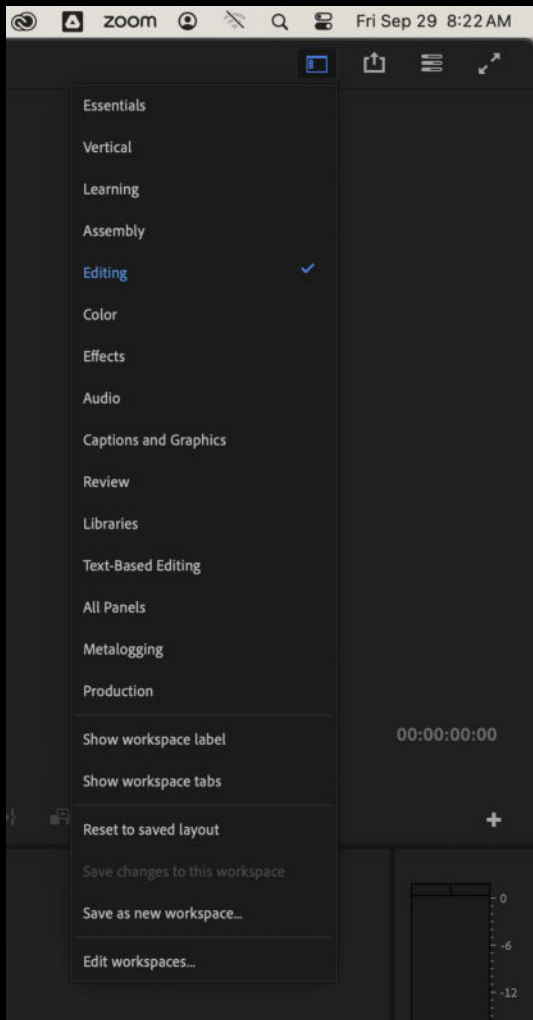

When you have named your project and set the location of your project file, click **Create**.

Make sure to name your project instead of Untitled
