Newark Board of Education
Information Services Division

Guidelines for the Procurement of Computer Equipment for Administrative & Instructional Use

The procurement of all computer equipment for both Administrative and Instructional (Student) use including PCs, Printers, Scanners, Smart Boards, and related accessories and supplies is subject to the approval of Information Services Division and must follow the guidelines and equipment Price List published by Information Services Division. All goods and services listed in the Price List shall be acquired from the listed vendors and the associated POs shall be issued to those vendors. The only purchase that will be made through Information Services Division will be the procurement of a new phone/fax line or the relocation of an existing phone/fax line using one of the two methods described below:

Methods for the Procurement of a New Phone/Fax Line or the Relocation of an Existing Phone/Fax line

Cost of a New Phone/Fax line = $680
Cost of Relocating an Existing Phone/Fax Line = $250 to $450 (Initial Assessment Required)

Method 1 – Budget Transfer (Departments/Administrative Offices):
This method involves a budget transfer and applies to departments/administrative offices. The amount of funds (listed above) needed to cover the cost of the requested equipment must be transferred to the ISD Account Code: **10 11 000 230 530 304 000 000**. A standard budget transfer form must be used to accomplish the transfer. This document is in PeopleSoft and the process is carried out electronically within the system.

Method 2 – Purchase Requisition (Schools and other units with specific funds):
This method primarily applies to schools. A Purchase Requisition is to be prepared for the amount listed above with a brief description of the line that will be moved including the existing location and the destination location of the line. **Newark Public Schools' Information Services Division is to be listed as the Vendor on the Requisition.**

Procurement of Non-standard Equipment:

Equipment listed on the attached price list is considered standard equipment, and all other equipment is considered non-standard. Deviation from the standard equipment list should only be considered when the standard equipment lacks specific features/functions required for the fulfillment of the task. Such deviations along with the supportive evidences must be submitted in writing to Information Services in advance of the purchase. Moreover, the purchase of such equipment or service shall only be initiated after an approval is granted. The justification and proposal for the purchase of non-standard equipment must also include all associated support and warranty services. Failure to adhere to the guidelines will result in the rejection of the requisitions in the PeopleSoft approval workflow process. It is also imperative that all technology related purchases appear under

the Technology Category in PeopleSoft so it can be routed to Information Services for approval via the PeopleSoft workflow. Technology related Purchase Requisitions that are entered under a non-technology category in PeopleSoft will be deemed non-compliant and will be rejected.

Procurement of Applications/Systems for Instructional or Operational Use

The purchase of all departmental, school based, and enterprise applications and systems are subject to the review and approval of Information Services for the purpose of ensuring compliance and interoperability with the district's technology standards. Information Services will assist with the authorship and issuance of RFPs and the review of related proposals as well as review and vendor negotiations for Non-RFP procurements. Information Services will also ensure that all the acquired technologies will comply with the district's standards in terms of security, optimal operation, warranty and support, and the long term total cost of ownership associated with the application or system under consideration.

It is imperative that all schools and Central Office departments inform Information Services of their plans for the procurement of such applications/systems in advance specially at Budget time. This will ensure that the proper amount of funds are allocated for the purchase and that all potential costs such as the annual maintenance costs for subsequent years are also identified. Schools and Central Office departments must also share their implementation plans with the Information Services Division in advance once the application/system under consideration has been purchased. This will allow ISD to place the project in the ISD project queue and allocate proper resources to the project at implementation time. Failure to comply with the said process may result in major delays during the implementation phase and/or system compatibility issues that may subject the project to even further delays.

Procurement of Equipment via Grants

All purchases made via various grants are also subject to the review and approval of Information Services. Schools and Central Office units involved in such purchases are to submit their purchase plans to Information Services in advance for review, advisement and approval. Information Services will ensure that all required components are accounted for and are included in the purchase plan. For purchases made via funds such as **Donors Choose**, Information Services has arranged for our vendors and service providers to work with **Donor Choose** and select the district standard equipment for such purchases including the installation and provisioning services. Teachers and school administrators who are involved with Donor Choose purchases are to contact Information Services in advance of their purchase. ISD will put them in touch with our vendors who will in turn send the necessary quotes to Donors Choose on behalf of the teachers. Donors Choose will then authorize the purchase of the district standard equipment for these schools. This process will ensure that the purchased equipment will work optimally on the district's network and that all the necessary licenses and warranty/support services are included in the purchase.

Acquisition of Donated Equipment

Schools or Central Office Departments may accept donated technologies from outside firms including hardware, software, and accessories subject to the following terms and conditions:

- A request to Information Services must be made seeking approval in advance of accepting such donated equipment. The request must include the make, model, QTY, vendor, manufacturer's date, and the condition of the equipment (e.g. New, Refurbished, etc.)

- The donated equipment must meet a minimum technical requirement necessary for optimal operation on the district's network. Outdated equipment that will require upgrades or constant support will increase the district's Total Cost of Ownership and will therefore be rejected.

- A formal letter on company letter head from the donating firm, preferably signed by the firm's senior management indicating that the donated equipment has been in the firm's possession legally and that the firm will transfer those rights to NPS without any future claims to the equipment. The letter must also indicate the device inventory information including serial numbers, make, model, etc.

- In the case of used equipment, the donated equipment must have undergone an electronic cleansing process to ensure that all sensitive data pertaining to the donating firm have been eradicated from the equipment prior to the transfer of ownership to NPS. All company labels and asset tags must have also been removed from the equipment prior to the shipment of the equipment to NPS.

- The school or Central Office department accepting such donated equipment must show evidence that it has sufficient funds to purchase all accessories, software licenses, etc. that are not transferrable from the donating firm but are essential for the operation of the equipment. Operating System licenses such as Windows for PCs/laptops as well as Google Management Licenses for Chromebooks are not transferrable and must therefore be purchased by the school or Central Office department accepting the donated equipment. Schools or Central Office departments can contact Information Services for directions on how to purchase these licenses.

Delivery and Installation of Equipment:

All deliveries will be made by the vendors directly to the schools/departments. Vendors will also communicate and coordinate the date and time of deliveries with the schools directly. In cases where the installation and provisioning services are included in the purchase order, the vendor will perform the on-site installation as well. In such cases, the vendors will also affix the NPS asset tags to the equipment where applicable. All receiving departments or schools are to sign the proper paper work presented to them during the installation process. This will serve as the proof of delivery and installation.

In situations where the installation and provisioning services are not included in the purchase order, schools and Central Office departments are responsible for ensuring that their new equipment will receive the proper asset tags and the electronic equipment inventory at the school is updated. The list of new equipment including the

serial numbers, make, model, PO, etc. will also need to be sent to the Fixed Assets department to the attention of Mr. Wilfred Young.   The Fixed Assets Office will also be able to provide schools with the district asset tags. Schools and Central Office departments may contact Information Services and request assistance for installation of certain equipment such as new monitors, smart board projectors, Smart Board bulbs (if schools can't do it), etc. All such requests must be sent to the ISD Customer Support at CSupport@nps.k12.nj.us or at 973-733-8700 so the corresponding support tickets can be created.

The installation of new Smart Panels or Smart Boards will be carried out by the Facilities Management department. Therefore Schools/Departments are to directly contact the Facilities Department for such installations. Schools/Departments must ensure that are the necessary cables and accessories required (outlined in the price list) for proper installation and operation of the Smart Boards have been purchased as part of the Smart Board purchase.   The installers will not be able to install the Smart Panels/Boards without the required accessories.

NOTE: The Smart Board vendor will deliver the new Smart Panels to the designated rooms in schools. However, schools are required to provide the room numbers to the vendor in advance of the delivery date. The vendor will only deliver the Smart Panels to the designated rooms on each floor during the initial delivery. The vendor's delivery team will not return to move the Smart Panels after the initial delivery is made. It is recommended that schools designate specific rooms on each floor for storing the Smart Panels for that floor during the delivery phase. This will ensure that the new Smart Panels are stored in a secure place while the school is waiting for the Facilities team to install them in the classrooms.

Special Note:

Please note that certain accessories such as printer toners have been removed from the price list. These items and the corresponding prices are already in PeopleSoft and can be ordered directly from the system. All departments and schools are responsible for ordering their toners and must do so in advance and based on their needs. Toners ordered for printers that are still under warranty as well as high volume and more expensive printers (even if they are out of warranty) high must be the original toners from the printer manufacturers. *Third party or compatible toners from reputable firms **can*** be ordered for older/depreciated printers such as classroom teacher printers.

All schools are requested to contact the Fixed Assets department and seek their assistance for tagging newly purchased items with the appropriate district asset labels. Newly purchased items (regardless of the cost) must also be entered into the schools inventory system.

Please note that the items in the attached list have also been color coded in order to ease the selection process. The color coding has been done in the following manner.

	Equipment intended for both Administrative and Instructional (Student) use
	Equipment intended for Administrators and Administrative Offices only
	Equipment ordered using ARRA, Title I, or SIG funds
	Equipment intended for Instructional (Student) use only
