Project: Create a calendar page

Task: Congratulations! You have been entered in a contest to create a Spanish calendar page for the Virginia Association of Beaches and Recreation's 2016 Spanish calendar. You will be assigned a month of the year in Spanish, and you will be given a calendar template. Use this template as well as the additional information that you have received about the Spanish months, days of the week, and numbers, to create a calendar page and image IN SPANISH. Be creative – Only the top five pages that pass through the judges will win!

Criteria: As you complete this assignment, think about the following criteria as a checklist. This is the criteria that will determine your ultimate grade on the assignment. The project is worth 30 points, and it will count as a quiz/project grade.

	All information is written completely in Spanish (-2 points if some words are done in English; -5 points if part of the project is done in English; and -10 if the entire project is done in English).
	<u>All</u> words (numbers, days of the week, etc.) are spelled correctly (this includes capitalization and accent marks!) (-1 point for each mistake with letters; -0.5 points for each mistake with accents).
	The numbers are written out and spelled, not just the number (so write "veinte" instead of "20") (You will be required to re-do the assignment if the numbers are not spelled out).
	You have included some sort of image to depict what your month represents (think holidays such as Christmas, seasons such as Summer, Rain, Snow, etc.) (You will not be deducted any points as long as you have some sort of image. It does not have to be super artistic or creative. It does not even have to be colored in, although that will help your chances of winning! No image is -2 points).
