

# Qwizdom® STUDENT REMOTE

## Student Remote Login

Student remote login allows a student to use any remote and sign in without assigning remotes. To have students sign in, each one must have a unique student ID number assigned to their student profile. This option is helpful when you:

- do not have assigned remotes
- have absent students
- have random people using remotes

To log in using student remotes:

- Open Qwizdom Interact and click on the *Content* tab.
- Select an activity and click on the *Present* button. The Presentation Setup window will appear.
- Select the class and check the *Log In by User ID* box under the Remotes section.
- Click *OK* when you are finished setting up the presentation. The Registration Screen will appear.
- Have individual students type in their student ID number on their remotes and hit the Send key. For example if a student's number is 043104 he/she will hit 0-4-3-1-0-4 on the remote and then hit the *Send* key to log on. The student's name along with their remote number will appear on the Registration Screen.
- If a student keys in the incorrect ID, have them hit the *Clear* button on their remote and then enter the correct student ID.
