Next, the builders put in all the lights and light switches.

Then, the builders close up the walls and ceilings. Now the floors can be covered and the walls can be painted.

Houses do not all look the same, but most home builders follow the same basic steps.

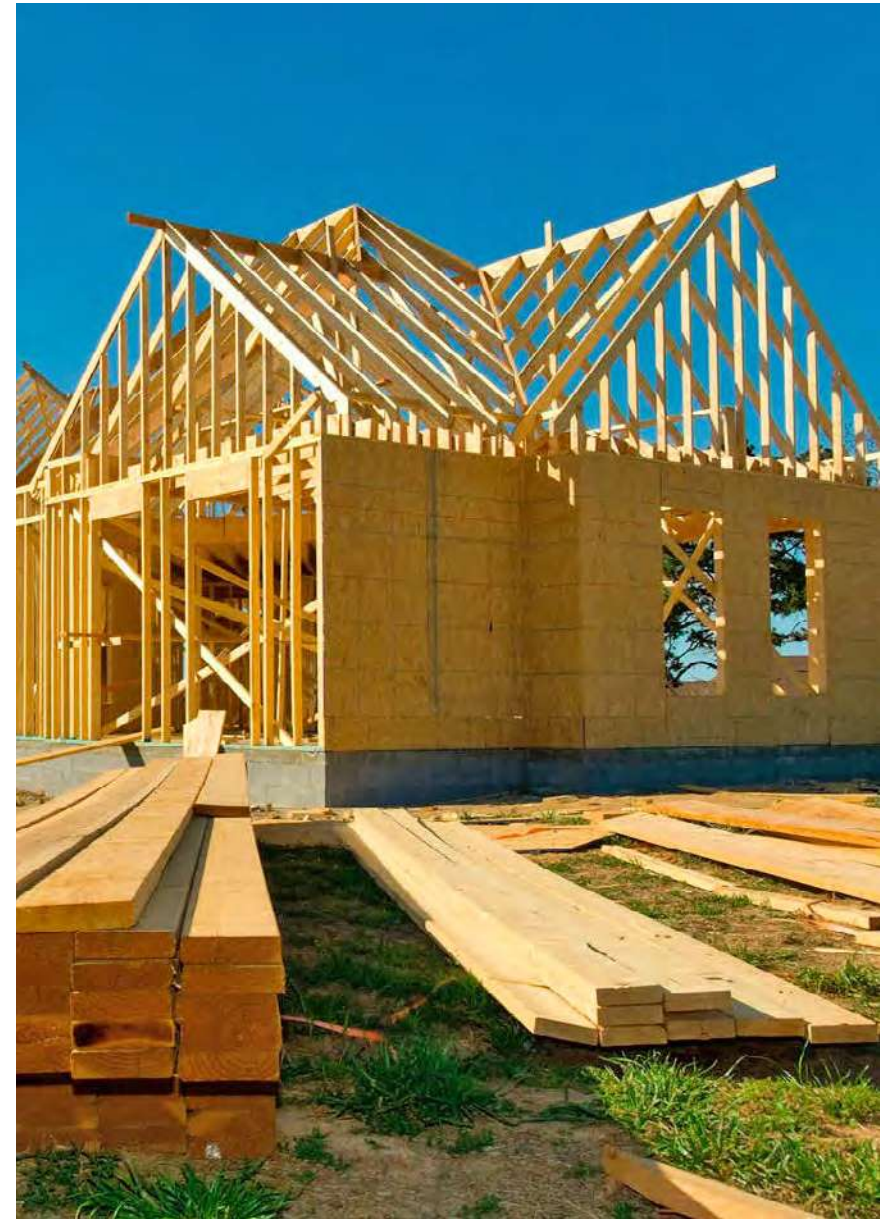

First, the builders make a strong base for the house. The base is called the *foundation*.

Next, the builders fill the empty spaces inside the walls and under the roof. This helps keep the house warm in winter and cool in summer.

Then, the builders put wires and pipes inside the walls.

Next, the builders add the floors, walls, and roof.

Then, the builders cover the roof and outside walls to keep the rain out. They leave the inside walls open so things can go inside them.

Next, the builders put in the windows and doors.
