## Conclusion

Our brain takes in information about the world we live in. Then our brain tells us what we are seeing, hearing, smelling, tasting, and feeling!

Our skin sends our brain  
information about things we touch.  
Our brain tells us how things feel.

What does this  
paper feel like?

## Table of Contents

Introduction . . . . .	4
Sight . . . . .	5
Sound . . . . .	7
Smell . . . . .	9
Taste . . . . .	11
Touch . . . . .	13
Conclusion . . . . .	15
Glossary . . . . .	16

## Introduction

How do we *feel* a warm bath?  
Or see our friends and *hear* a song?  
How do we *smell* a flower  
and *taste* an apple?  
Our brain uses our five **senses**  
to tell us things about our world!

## Touch

How do you know if something feels  
hot, cold, soft, hard, or scratchy?  
We use parts of our skin to touch.

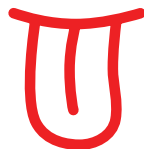

Our tongue has tiny bumps called **taste buds**.

They send information about food to our brain.

Our brain tells us what the taste is.

What have you  
tasted today?

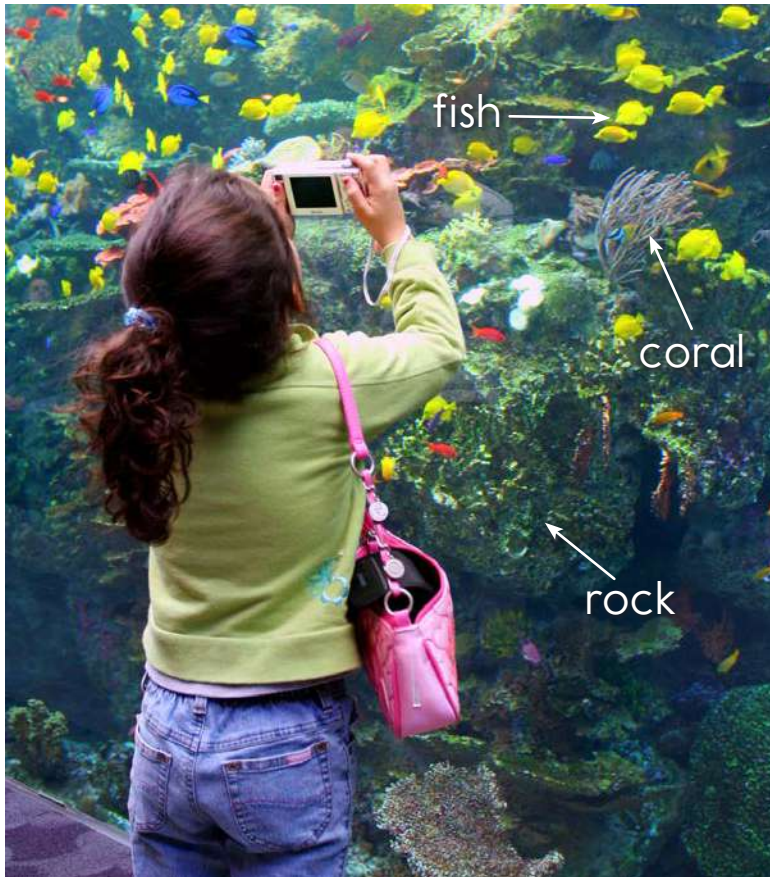

## Sight

Look around.

There is so much to see!

We use our eyes to see everything around us.

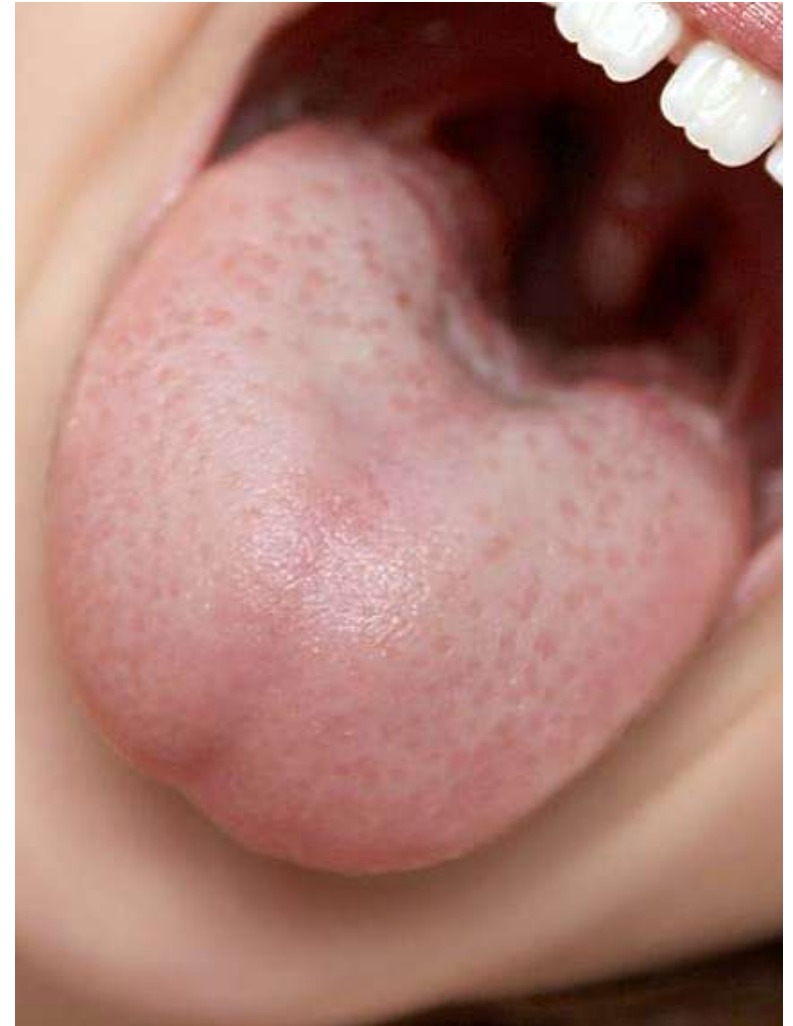

Our eyes take pictures.  
They send the information  
to our brain.

Our brain tells us what we see.

What are you  
seeing now?

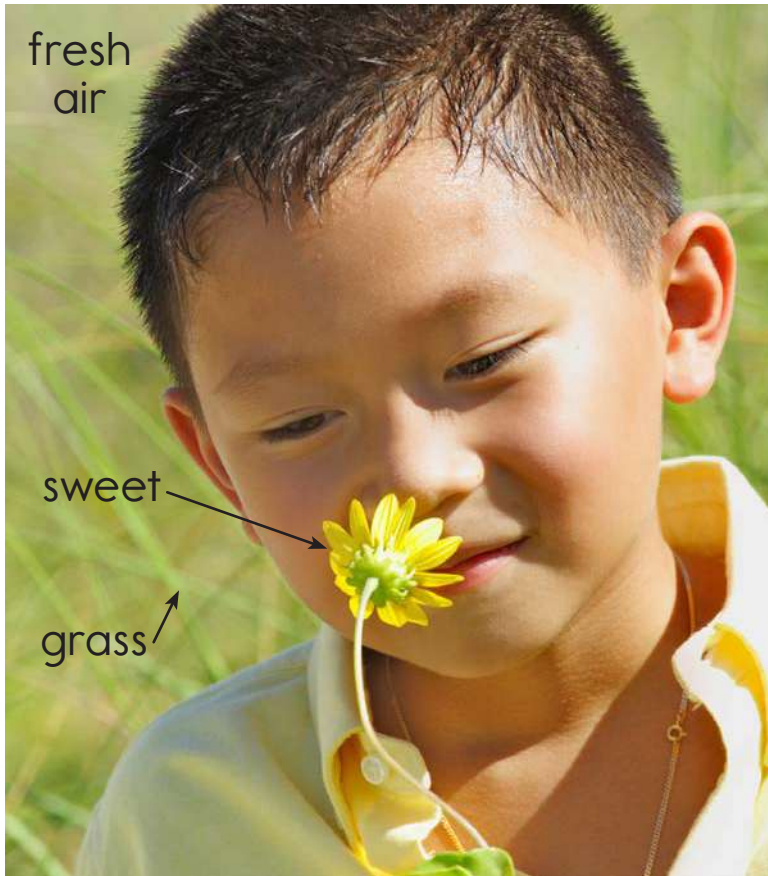

## Taste

Foods we eat can be sweet, salty,  
sour, or **bitter**.

We use our tongue to taste our food.

Air carries smells inside our nose.  
Our nose sends the smells  
to our brain.

Our brain tells us what we smell.

What are you  
smelling now?

## Sound

Sound is all around us.  
We use our ears to hear  
all the sounds and noises.

Sound can be quiet or **LOUD**.

Our ears send sounds to our brain.

Our brain tells us what we hear.

What are you  
hearing now?

## Smell

The air is full of **smells**.

We use our nose to smell them.
