Related Rates Quiz ~~2014~~ doc

2014

Solve the following related rates problems. You must show work to get credit.

1) The length of a rectangle is **increasing** at a rate of 2 cm/sec while the width is **decreasing** at a rate 5 cm/sec. When the length is 15 cm and the width is 8 cm find the rates of change of the following.

a) The area

$$\frac{dX}{dt} = 2$$

$$\frac{dY}{dt} = -5$$

Width: Y 8

Length: X

15

$$A = XY$$

$$\frac{dA}{dt} = \frac{dX}{dt}Y + X\frac{dY}{dt}$$

$$\frac{dA}{dt} = (2)(8) + (15)(-5)$$

$$\frac{dA}{dt} = -59 \text{ cm}^2/\text{sec}$$

b) The perimeter

$$P = 2Y + 2X$$

$$\frac{dP}{dt} = 2\frac{dY}{dt} + 2\frac{dX}{dt}$$

$$\frac{dP}{dt} = 2(-5) + 2(2)$$

$$\frac{dP}{dt} = -6 \text{ cm/sec}$$

2) A highway patrol helicopter is hovering 0.06 miles above a level, straight highway. The helicopter pilot sees a car on the highway and determines with radar that at that particular instant, the distance between the helicopter and the car is 0.10 miles and is increasing at a rate of 64 miles per hour. Find the car's speed along the highway.

$$x^2 + 0.06^2 = z^2$$

$$2x \frac{dx}{dt} + 2(0.06) \frac{dz}{dt} = 2z \frac{dz}{dt}$$

$$2(.08) \frac{dx}{dt} + 2(.06)(64) = 2(.1)(64)$$

$$\frac{dx}{dt} = \frac{(-.1)(64)}{2(.08)}$$

$$\frac{dx}{dt} = -80 \text{ mph}$$

3) The volume of a sphere is decreasing at a rate of $8\pi \text{ cm}^3/\text{min}$. At what rate is the surface area changing when the radius is 2 cm? **Leave answer in terms of π .**

$$A = 4\pi r^2 \quad V = \frac{4}{3}\pi r^3$$

$$\frac{dA}{dt} = 8\pi r \frac{dr}{dt}$$

$$\frac{dV}{dt} = 4\pi r^2 \frac{dr}{dt}$$

$$\frac{dA}{dt} = 8\pi \left(-\frac{1}{4}\right)$$

$$-8\pi = 4\pi 2^2 \frac{dr}{dt}$$

$$-5\pi = \frac{dr}{dt}$$

$$\frac{dA}{dt} = -5\pi$$

$$\approx -25.13$$

- 4) The bottom of a 545 cm long ladder is sliding away from the base of a wall at a rate of 66 cm/sec. How fast is the top of the ladder moving when it is 33 cm from the ground?

$x^2 + y^2 = z^2$
 $2x \frac{dx}{dt} + 2y \frac{dy}{dt} = 2z \frac{dz}{dt}$
 $2(544)(66) + 2(33) \frac{dy}{dt} = 0$
 $\frac{dy}{dt} = \frac{-2(544)(66)}{2(33)}$
 $\frac{dy}{dt} = -1088 \frac{\text{cm}}{\text{sec}}$

- 5) Water is pouring into a cone shaped tank at a rate of 8 cubic feet per minute. The height of the tank of the tank is 12 feet and the radius at the top is 4 feet. How fast is the water level rising when the water is 6 feet deep? **Leave answer in terms of π .**

$V = \frac{1}{3} \pi r^2 h$
 $V = \frac{1}{3} \pi \left(\frac{1}{3} h\right)^2 h$
 $V = \frac{1}{3} \pi \frac{1}{9} h^3$
 $V = \frac{1}{27} \pi h^3$
 $\frac{dV}{dt} = \frac{3}{27} \pi h^2 \frac{dh}{dt}$
 $8 = \frac{1}{9} \pi h^2 \frac{dh}{dt}$
 $\frac{dh}{dt} = \frac{72}{36\pi}$

$\frac{r}{h} = \frac{4}{12}$
 $r = \frac{1}{3} h$

$\frac{dV}{dt} = \frac{8}{\pi} \text{ ft}^3/\text{min}$
 $\approx 2.546 \text{ ft}^3/\text{min}$

Extra Credit Questions:

1) Find the following limit. $\lim_{x \rightarrow -\infty} \frac{x^2 - 5x + 3}{3x + 2}$

10 NOV

2) Find the derivative of: $x^2 y + 5 y^2 = y - 8$

$$2xy + x^2 \frac{dy}{dx} + 10y \frac{dy}{dx} - \frac{dy}{dx} = -2xy$$

$$\frac{du}{dx} = \frac{-2xy}{x^2 + 10y - 1} \quad \text{or} \quad \frac{2xy}{1 - x^2 - 10y}$$

Formulas:

Volume of a cone: $V = \frac{1}{3} \pi r^2 h$

Surface area of a sphere: $A = 4\pi r^2$

Volume of a sphere: $V = \frac{4}{3} \pi r^3$

Area of a circle: $A = \pi r^2$

Volume of a cube: $V = x^3$

Surface area of a cube: $A = 6x^2$
