Paleolithic Age Facts

The Paleolithic years ago. The Paleolithic people invented tools. *"Simple Pebble Tools"*. It began when nomads started making tools. Artifacts have been found in East Africa, China, Southeast Asia, Europe, Middle East, and America. The name means "Old Stone Age". People have four It began about 2.5 million years ago. They used stone, rock, and wood tools.

How They Looked

Mesolithic Age
By Sophie Salazar

The Mesolithic Age is known as the Middle Age. During this time stone tools were made. The Mesolithic people made/ invented wooden bows for hunting and made/ invented boats for fishing. They started being able to control fire and also starting to be able to develop language. The age started from roughly 10,000 B.C. to 6,000 B.C. They ate fish, mussels, deer, wild boar, plants, berries, fruit, vegetables, and nuts.

Paleolithic Facts!

The Paleolithic Age (also known as the Old Stone Age) had the first sign of humans. There were people called hunter-gatherers to hunt and collect food. This Period had the first sign of tool construction made from stone. Tools were axes and knives. There was also jewelry made from bones like necklaces and bows. The humans also made cave art of humans, animals, or what their gods and goddess. People had houses in caves or huts made of sticks. Their skulls look different from what we look like today. This is because humans have evolved many times to look like what we are. Since this was about 2.5 million years ago they look different from us. All of these things predates of when the first human species was discovered.

History
By: Grayson

History is important because you can learn about your ancestors and how they lived. You can also learn what happened in the past, so we will not repeat mistakes from the past. In my layer of excavation, I discovered dinosaurs, bones, shells, and animals. I belonged to Team Penguins, where my role was the anthropologist. I bagged the artifacts and wrote the time and location it was located. In addition, I also labeled each artifact with the name. The experience was amazing. It let me visualize what real anthropologists do. I also helped my team on the geologist part. As a group we all contributed work. We work as a team, it would be a 95.

History is important because we might be able to compare the past to where we are now, and if we can gain any information from the people who lived during those times.

During my and our digging site we saw that there were many layers to the digging site. Some had dirt with nutrients to plants and the other layers were red dirt or just normal dirt. During my exploration we found many artifacts and fossils, which include bones, arrowheads, pottery, and plastic human bodies, teeth and dinosaur bones. I could tell that the fossils and artifacts were during the stone age, because most of the artifacts I found had stone tools and had deer skin to keep warm. Our team's name was xerox, our digging site was Area 51. I think my experience was great. I don't know what my members would say. But overall I think we got a 85% for our group
