### **Secondary Math Course Sequence**

The following flow chart demonstrates the traditional progression of mathematics courses at the three middle schools and Carmel High School. This sequence can vary somewhat depending on the needs of individual students. Important points about the math sequence:

- Indiana's graduation requirements mandate that students take four years of high school level math during high school. Thus, enrollment in middle school advanced and honors math courses does not enable students to take less math coursework during their high school years.
- All three math sequences provide students with the opportunity to earn an Academic Honors Diploma.
