

I am the science teacher for C-A school. I currently teach all the grade 7-12 science courses.

7th and 8th grade: Life Science and Earth Science

9th and 10th grade: Physical Science and Biology

11th and 12th grade: Chemistry, Chemistry Concepts and Human Anatomy/Physiology

I attended both the University of MN, Twin Cities College of Natural Resources where I majored in Fisheries and Wildlife Management and the University of MN, Morris, where I majored in Biology and completed my secondary education teaching program. Between my stints at the two colleges, I served as an Infantryman in the United States Army. I am licensed by the state of MN to teach Life Sciences, Chemistry and Earth and Space Science.

I have been a teacher for 15 years. I've taught at Herman-Norcross, Breckenridge, and Chokio-Alberta. I've taught at C-A a combined 9 years.

I also took some time off from teaching to work as a watershed specialist for the Pomme de Terre River association. I also worked as a wetlands restoration biologist for Ducks Unlimited.

I decided to return to teaching because I missed working with kids, and helping them understand the natural world around them. I believe my experience as a science teacher, along with my real world science experience makes me someone who is uniquely qualified to teach science.

I also currently work seasonally during the summers for the US Fish and Wildlife Service as a habitat biological technician. I've been doing this for the past 8 years.

In my spare time I love to bicycle on the endless gravel roads of this area, and fat tire bike in the winter. In the fall, I'm an avid pheasant hunter.
