

DEPTH OF FIELD

PHOTZY.COM

Perfect to print A5 size
14cm x 21cm / 5.83" x 8.27"

It's not only the aperture factor that will render more or less depth of field (DOF); other factors, like distance of the focal plane to the subject or the background, sensor size, and lens focal length, also add to the equation.

📍 Focus point 📏 Closest DOF Window - slight blur 🌫️ Furthest DOF Window - total blur

APERTURE*

The wider the aperture, the less depth of field (more blur).

DISTANCE*

The closer the subject is to the camera, the blurrier the background will be at a given f/stop.

FOCAL LENGTH*

The wider the lens (shorter focal length), the more depth of field (more in focus).

*Distances and other data are to be taken for reference only. The information may not be accurate for all cameras.

SWEET!

Here's a few more photography goodies for you:
