Solving Inequalities Cue Card – With Examples

Inequality Symbols: Always read from the variable!

S	Symbol	Words	Graph
	<	"less than"	→
	≤	"less than or equal to", "no more than", "at most"	
	>	"greater than"	
	2	"greater than or equal to" "no less than" "at least"	-

Example: x > 5 reads "x is greater than 5"; 5 > x reads "x is less than 5".

Inverse Operations: Addition & Subtraction

Positive # & Negative #

Multiplication & Division ~

When Multiplying or Dividing by a negative number **FLIP THE SYMBOL!**

Solving 1-Step Inequalities Cue Card

Step 1:

Use inverse operations to undo the number on the same side of the variable *FLIP the inequality sign if you multiply or divide by a negative number

Solve x + 3 < 7 and graph the solutions.

$$x + 3 < 7$$

Solve $x - 2 \ge 1$ and graph the solutions.

$$x-2 \ge 1$$

Add 2 to each side.

$$x \ge 3$$

Solve $\frac{x}{3} > -2$ and graph the solution.

$$\frac{x}{3} > -2$$

$$3 \cdot \frac{x}{3} > 3 \cdot (-2)$$
 Multiply both sides by 3.

$$x > -6$$

Solve $-2m \le 10$ and graph the solutions.

$$-2m \leq 10$$

$$\frac{-2m}{-2} \le \frac{10}{-2}$$

Divide both sides by -2.

Dividing by a negative. Reverse inequality sign.

Solving 2-Step Inequalities Cue Card	
Step 1:	Undo Addition or Subtraction to the number on the same side of the variable using inverse operations
Step 2: Undo the multiplication or division *FLIP the inequality sign if you multiply or divide by a negative number	

Solve -5x + 3 < 23 and graph the solutions.

$$-5x + 3 < 23$$

$$-3 \quad -3 \quad Add -3 \text{ to each side.}$$

$$-5x < 20$$

$$\frac{-5x}{-5} < \frac{20}{-5}$$
 Divide both sides by -5 .

$$x > -4$$
 Reverse the inequality sign.

$$\frac{y}{6} - 9 \le 1$$

$$\frac{+9}{6} \le \frac{+9}{6}$$

$$\frac{y}{6} \le 10$$

$$\frac{y}{6} \cdot 6 \le 10 \cdot 6$$
$$y \le 60$$

The solution is $y \le 60$.

	tep Inequalities	
Step 1:	Distribute	Multiply $5(x + 6)$
		5x + 30
Step 2:	Combine Like Terms on the SAME side of the equal sign	<u>4a</u> + <u>5</u> + <u>2a</u> - <u>3</u>
		6a + 2
Step 3:	Is there a variable on both sides?	
	Yes; Use inverse operations to mo	ve No; Go to Step 4
	the variable term to the left	
Step 4:		e number on the same side of the variable
61	(add or subtract)	
Step 5:	Use inverse operations to undo an	
		ultiply or divide by a negative number
-2(x + 3) < 10	3x+2 < x-4
		-X -X
-2x	-6 < 10	
	-6+6<10+6	2×+2<-4
- 2x	< 16	
-2 <i>x</i>	Flip Inequality Sign!	2x < -6
-2	> 16 Flip Inequality Sign!	2x < -6
x > -8		2 2
		X < -3

Solving Multi-Step Equations		
Step 1:	Distribute	5(x+6)
		5x + 30
Step 2:	Combine Like Terms on the SAME side of the equal sign	4a + 5 + 2a - 3 6a + 2
Step 3:	Is there a variable on both sides? Yes; Use inverse operations to move the variable term to the left	No; Go to Step 4
Step 4:	Use inverse operations to undo the number on the same side of the variable (add or subtract)	
Step 5:	Use inverse operations to undo any multiplication or division	

Solving Multi-Step	Equations

Step 1:	Distribute $\frac{\text{Multiply}}{5(x+6)}$	
	5x + 30	
Step 2:	Combine Like Terms on the SAME side of the equal sign $4a + 5 + 2a - 3$	
	6a + 2	
Step 3:	Is there a variable on both sides?	
	Yes; Use inverse operations to move the variable term to the left No; Go to Step 4	
Step 4:	Use inverse operations to undo the number on the same side of the variable (add or subtract)	
Step 5:	Use inverse operations to undo any multiplication or division	

Solving Multi-Step Inequalities			
Step 1:	Distribute		
Step 2:	Combine Like Terms on the SAME side of the equal sign		
Step 3:	Is there a variable on both sides?		
	Yes; Use inverse operations to move	No; Go to Step 4	
	the variable term to the left		
Step 4:	Use inverse operations to undo the number on the same side of the variable		
	(add or subtract)		
Step 5:	Use inverse operations to undo any multiplication or division		
	*FLIP the inequality sign if you multiply or divide by a negative number
