Diagram illustrating the large intestine (colon) and its associated structures. The diagram shows the ascending colon, transverse colon, descending colon, sigmoid colon, rectum, and anus. It also labels the right colic flexure (hepatic), left colic flexure (splenic), ileocecal junction, caecum, appendix, and haustra.

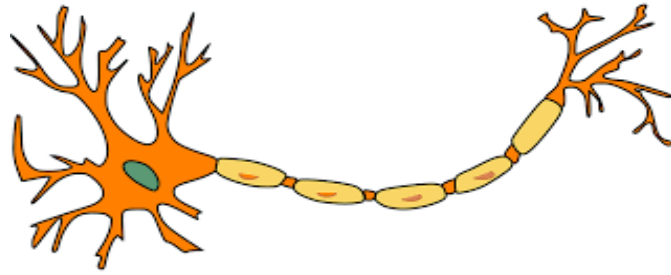

Diagram illustrating the vagus nerve and its branches. The right vagus nerve is shown on the left side of the diagram, and the left vagus nerve is shown on the right side. The diagram highlights the division of the vagus nerve into the truncal vagotomy and the selective vagotomy. The selective vagotomy branches are labeled: Hepatic branch of left vagus, Celiac branch of right vagus, and Pyloric branch of left vagus. The anterior nerve of the stomach is also shown.

This anatomical diagram illustrates the human digestive system. Key components labeled include the Tongue, Pharynx, Esophagus, and Stomach. The diagram shows the pathway of food from the mouth through the pharynx and esophagus into the stomach.

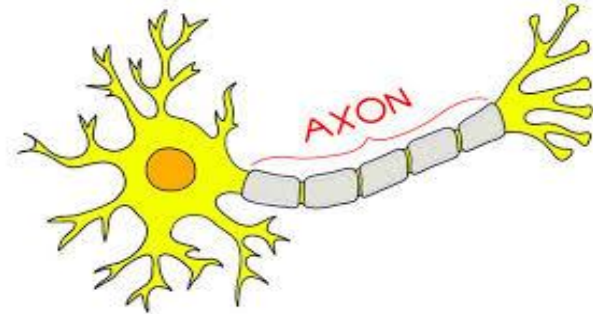

An anatomical illustration of the human torso from the front, showing the internal organs. The liver is highlighted in a bright red color, positioned in the upper right quadrant of the abdomen, just below the diaphragm. The rest of the body is shown in a semi-transparent blue color, revealing the rib cage, lungs, and skeletal structure.
