25 MINUTES, 20 QUESTIONS

Turn to Section 3 of your answer sheet to answer the questions in this section.

DIRECTIONS

For questions 1-15, solve each problem, choose the best answer from the choices provided, and fill in the corresponding circle on your answer sheet. **For questions 16-20**, solve the problem and enter your answer in the grid on the answer sheet. Please refer to the directions before question 16 on how to enter your answers in the grid. You may use any available space in your test booklet for scratch work.

The formula below is often used by project managers to compute E, the estimated time to complete a job, where O is the shortest completion time, P is the longest completion time, and M is the most likely completion time.

$$E = \frac{O + 4M + P}{6}$$

Which of the following correctly gives P in terms of E, O, and M ?

A) $P = 6E - O - 4M$

B) $P = -6E + O + 4M$

C) $P = \frac{O + 4M + E}{6}$

DIRECTIONS

For questions 16-20, solve the problem and enter your answer in the grid, as described below, on the answer sheet.

1. Although not required, it is suggested that you write your answer in the boxes at the top of the columns to help you fill in the circles accurately. You will receive credit only if the circles are filled in correctly.
2. Mark no more than one circle in any column.
3. No question has a negative answer.
4. Some problems may have more than one correct answer. In such cases, grid only one answer.
5. **Mixed numbers** such as $3\frac{1}{2}$ must be gridded as 3.5 or 7/2. (If $3 1 / 2$ is entered into the grid, it will be interpreted as $\frac{31}{2}$, not $3\frac{1}{2}$.)
6. **Decimal answers:** If you obtain a decimal answer with more digits than the grid can accommodate, it may be either rounded or truncated, but it must fill the entire grid.

Answer: $\frac{7}{12}$ Answer: 2.5

The homeowner estimates that the average annual energy cost will then be $2,712. Which of the following inequalities can be solved to find t, the number of years after installation at which the total amount of energy cost savings will exceed the installation cost?

A) $25,000 > (4,334 - 2,712)t$

B) $25,000 < (4,334 - 2,712)t$

C) $25,000 - 4,334 > 2,712t$

D) $25,000 > \dfrac{4,332}{2,712}t$

(handwritten: B circled; letter B to the left)

(handwritten: $25000 + 4334t - 2712t$)

Questions 21 and 22 refer to the following information.

Between 1985 and 2003, data were collected every three years on the amount of plastic produced annually in the United States, in billions of pounds. The graph below shows the data and a line of best fit. The equation of the line of best fit is $y = 3.39x + 46.89$, where x is the number of years since 1985 and y is the amount of plastic produced annually, in billions of pounds.

US Production of Plastic

Number of years since 1985
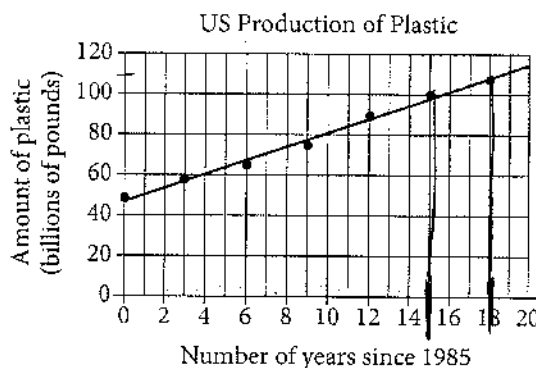

(handwritten: 2000 - 2003)

21

Which of the following is the best interpretation of the number 3.39 in the context of the problem?

A) The amount of plastic, in billions of pounds, produced in the United States during the year 1985

B) The number of years it took the United States to produce 1 billion pounds of plastic

C) The average annual plastic production, in billions of pounds, in the United States from 1985 to 2003

D) The average annual increase, in billions of pounds, of plastic produced per year in the United States from 1985 to 2003

$$M = 1,800(1.02)^t$$

The equation above models the number of members, M, of a gym t years after the gym opens. Of the following, which equation models the number of members of the gym q quarter years after the gym opens?

A) $M = 1,800(1.02)^{\frac{q}{4}}$

B) $M = 1,800(1.02)^{4q}$

C) $M = 1,800(1.005)^{4q}$

D) $M = 1,800(1.082)^{q}$

Say 20 Quarters how many years?

$\dfrac{20}{4} = 5$ years

$\dfrac{q}{4} = t$

For the finale of a TV show, viewers could use either social media or a text message to vote for their favorite of two contestants. The contestant receiving more than 50% of the vote won. An estimated 10% of the viewers voted, and 30% of the votes were cast on social media. Contestant 2 earned 70% of the votes cast using social media and 40% of the votes cast using a text message. Based on this information, which of the following is an accurate conclusion?

A) If all viewers had voted, Contestant 2 would have won.

B) Viewers voting by social media were likely to be younger than viewers voting by text message.

C) If all viewers who voted had voted by social media instead of by text message, Contestant 2 would have won.

D) Viewers voting by social media were more likely to prefer Contestant 2 than were viewers voting by text message.

Population of Greenleaf, Idaho

Year	Population
2000	862
2010	846

The table above shows the population of Greenleaf, Idaho, for the years 2000 and 2010. If the relationship between population and year is linear, which of the following functions P models the population of Greenleaf t years after 2000?

A) $P(t) = 862 - 1.6t$

B) $P(t) = 862 - 16t$

C) $P(t) = 862 + 16(t - 2,000)$

D) $P(t) = 862 - 1.6(t - 2,000)$

A

$$\text{slope} = \frac{846 - 862}{2010 - 2000} = \frac{-16}{10}$$

$$M = -1.6$$

$$b = 862$$

$$y = MX + b$$

To determine the mean number of children per household in a community, Tabitha surveyed 20 families at a playground. For the 20 families surveyed, the mean number of children per household was 2.4. Which of the following statements must be true?

C

A) The mean number of children per household in the community is 2.4.

B) A determination about the mean number of children per household in the community should not be made because the sample size is too small.

C) The sampling method is flawed and may produce a biased estimate of the mean number of children per household in the community.

D) The sampling method is not flawed and is likely to produce an unbiased estimate of the mean number of children per household in the community.

In the xy-plane, the point (p, r) lies on the line with equation $y = x + b$, where b is a constant. The point with coordinates $(2p, 5r)$ lies on the line with equation $y = 2x + b$. If $p \neq 0$, what is the value of $\dfrac{r}{p}$?

A) $\dfrac{2}{5}$

B) $\dfrac{3}{4}$

C) $\dfrac{4}{3}$

D) $\dfrac{5}{2}$

(handwritten)

For questions 31-38, solve the problem and enter your answer in the grid, as described below, on the answer sheet.

1. Although not required, it is suggested that you write your answer in the boxes at the top of the columns to help you fill in the circles accurately. You will receive credit only if the circles are filled in correctly.
2. Mark no more than one circle in any column.
3. No question has a negative answer.
4. Some problems may have more than one correct answer. In such cases, grid only one answer.
5. **Mixed numbers** such as $3\frac{1}{2}$ must be gridded as 3.5 or 7/2. (If 3 1 / 2 is entered into the grid, it will be interpreted as $\frac{31}{2}$, not $3\frac{1}{2}$.)
6. **Decimal answers:** If you obtain a decimal answer with more digits than the grid can accommodate, it may be either rounded or truncated, but it must fill the entire grid.

Answer: $\frac{7}{12}$

Answer: 2.5

Write answer in boxes. ← Fraction line

Grid in result. ← Decimal point

Acceptable ways to grid $\frac{2}{3}$ are:

Answer: 201 – either position is correct

NOTE: You may start your answers in any column, space permitting. Columns you don't need to use should be left blank.

On April 18, 1775, Paul Revere set off on his midnight ride from Charlestown to Lexington. If he had ridden straight to Lexington without stopping, he would have traveled 11 miles in 26 minutes. In such a ride, what would the average speed of his horse have been, to the nearest tenth of a mile per hour?

11 miles in 26 minutes

$$26 \cancel{\text{min}} \cdot \frac{1 \text{ hr}}{60 \cancel{\text{min}}} = \frac{26}{60} = \frac{1?}{3} \text{ ho}$$

$$\frac{11 \text{ miles}}{\frac{13}{30} \text{ hr}} = 11 \cdot \frac{30}{13} = \frac{330}{13}$$

$$\approx 25.384$$

$$\approx \boxed{25.4}$$

The graph of the function f, defined by

$f(x) = -\frac{1}{2}(x-4)^2 + 10$, is shown in the xy-plane

above. If the function g (not shown) is defined by

$g(x) = -x + 10$, what is one possible value of a such

that $f(a) = g(a)$?

$\boxed{2 \text{ or } 8}$

$-\frac{1}{2}(x-4)^2 + 10 = -x + 10$

$-\frac{1}{2}(x-4)(x-4) + 10 = -x + 10$

$-\frac{1}{2}(x^2 - 8x + 16) + 10 = -x + 10$

$-\frac{1}{2}x^2 + 4x - 8 + 10 = -x + 10$
$\phantom{-\frac{1}{2}x^2} + x - 10$
_____

$-\frac{1}{2}x^2 + 5x - 8 = 0$

$x^2 - 10x + 16 = 0$

$(x - 8)(x - 2) = 0$
