

You need to create a foldable over the diseases of the urinary system. But instead of using the layman's term for the body part listed you need to label the part according to the medical term associated with that term. For example, Kidney Stones is a disorder of the Urinary system. On your foldable you wouldn't call it kidney stones you would call it, Ren/o, Nephr/o Stones, then in parenthesis you would label it Kidney Stones. Diseases and disorders can be found on pages 225-232. Make sure you also note signs and symptoms and treatment options. Any time you can use a medical term instead of the laymen term use it.

Chronic Kidney Disease would be Chronic Ren/o, Nephr/o disease.

This can be a trifold foldable and is due by the end of the period.
