

For Where Does Light Come From?

Light is all around us.

But where does light come from?

Light sources can be **artificial** (made by humans) or **natural** (happens without humans).

Artificial sources of light include:
flashlights,

streetlights,

and lightbulbs.

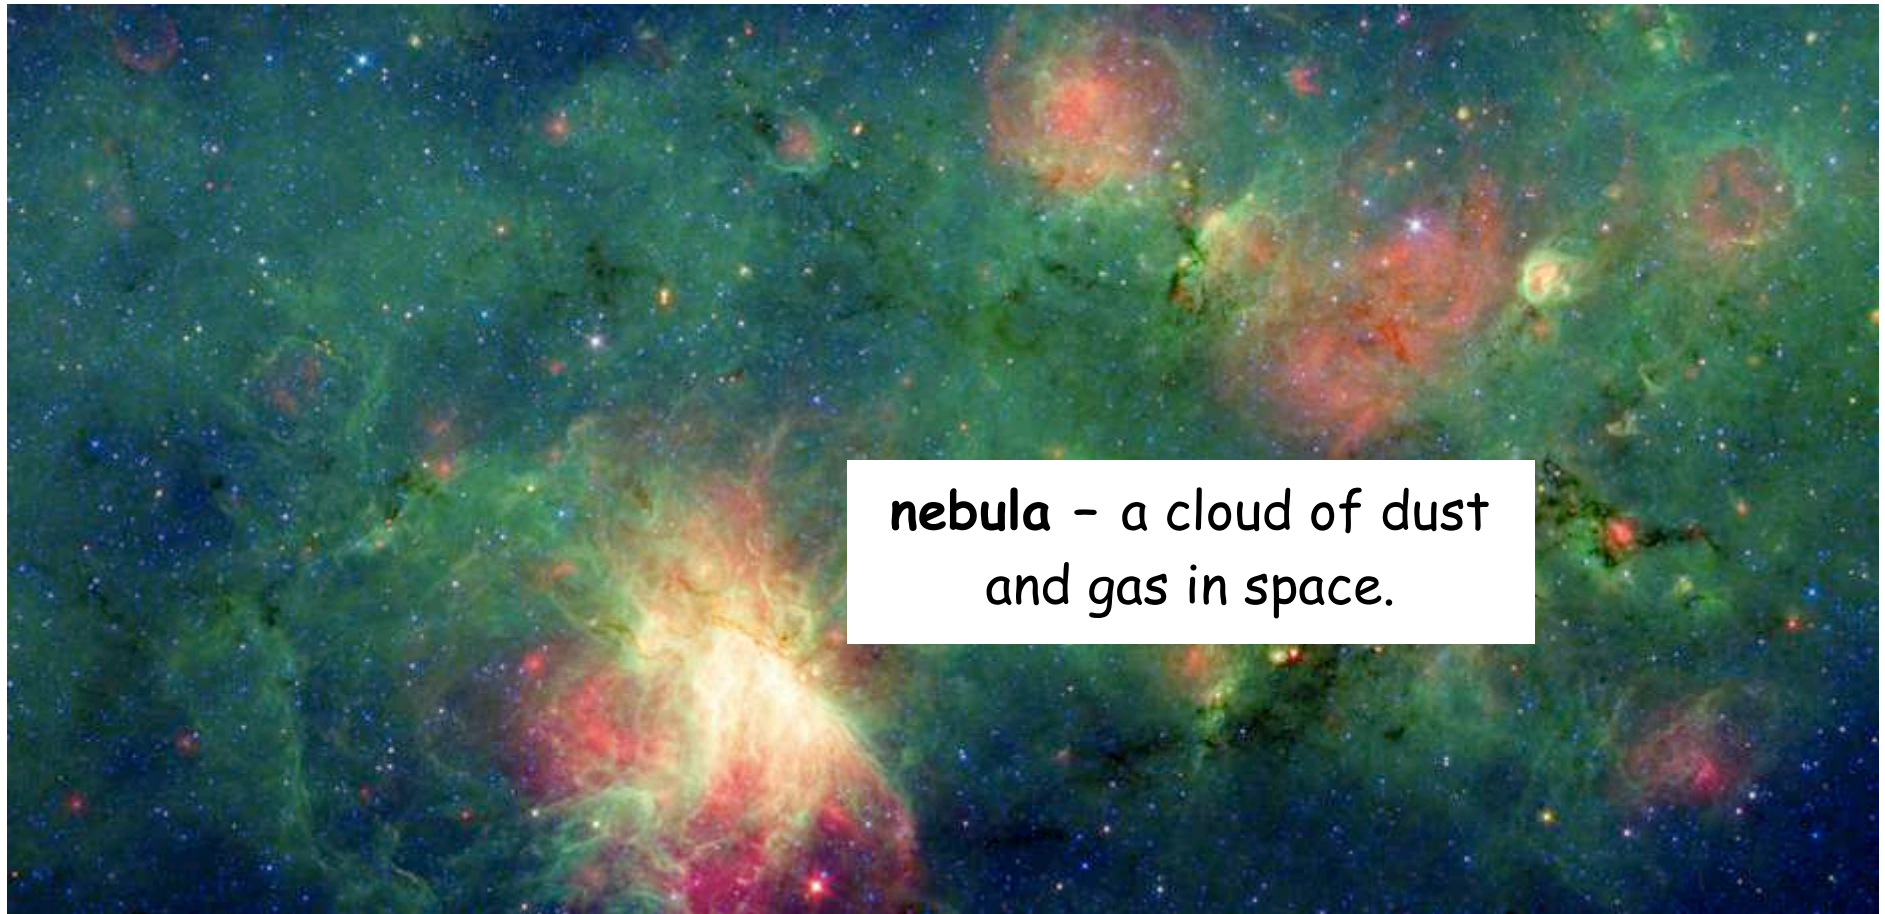

Natural sources of light include: the
sun,

lightning,

the moon,

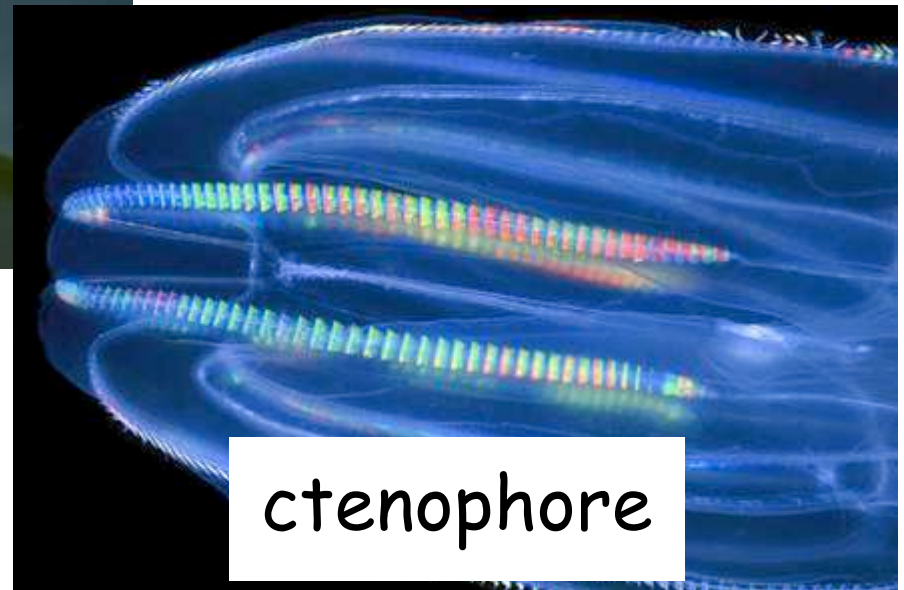

nebula - a cloud of dust
and gas in space.

nebulas and stars,

firefly

bioluminescence –
when a living thing
makes and glows out
light.

ctenophore

and even living things.
