Week 4-Med Term

Introduction: Eponyms are words or terms derived from people's names. Medical eponyms have been used for centuries for identification and scientific recognition of various medical diseases, syndromes, methods, process, substances, organs, organ parts, signs and symptoms. There are approximately 8,000 medical eponyms that exist today.

Instructions: Research the following **15** diseases or syndromes. List the eponym for whom it is referencing and describe the disease.

	Disease or Syndrome	Eponym	Describe what it is:
