

**Mr. Johnston:** Makayla is a sophomore in my AP Chemistry class, she has shown an aptitude for learning abstract concepts quickly and deeply. Makayla asks great questions that demonstrate she is truly thinking about the way the world works on the molecular level. Makayla's interest in learning and genuine curiosity for science will serve her well throughout high school and beyond, she is a student that makes Shakopee High School a great place to teach and learn.

**Makayla Cizek:** Mr. Johnston has created a fun and inclusive learning environment that has made me love to learn chemistry! He is always sure to ask if anyone needs help, and is willing to use different techniques to teach everyone in each individual way. He makes class different and exciting each day and definitely changes the way that I look at day to day life on a molecular level!

**Mr. Hoffman:**

Mason participates! The classroom environment within our biology classroom is heavily built on both small and large group classroom discussion. Mason is often the catalyst that drives our classroom discussion and learning forward. I appreciate the attitude and work ethic that Mason brings to class everyday. Mason's genuine curiosity for science, dare I say the environment (fingers crossed), will serve him well throughout his time in the Science and Technology Academy.

**Mr. Mason Klehr**

Mr. Hoffman is a very well liked teacher. He is very understanding and easy to communicate with. His way of teaching is a good way and easy to learn from. He is very interested in the subject he teaches and it clearly pays off when learning from him.
