TABLE OF CONTENTS

1. **Introduction/LEA Designate & (Assurances)**
   - Overview of Asbestos
   - AHERA Regulations

2. **Summary of Asbestos Containing Building Materials (ACBM) in this facility**
   - AHERA General Data Sheet
   - Locations & Quantities of Asbestos Containing Building Materials
   - Asbestos Location Diagrams
   - Consultants Cost Estimates for Asbestos Removal

3. **Plan Distribution/Notification**
   - Annual (Employee) Notification Records
   - Annual (Parent/Legal Guardian/Occupant) Notification Records

4. **Notification & Training of Employees/Contractors/Short-Term Workers**
   - Contractor Notification Letter
   - Contractor Notification/Acknowledgment
   - Contractor Asbestos Awareness Training Records

5. **Training Records**
   - LEA Designate/Asbestos Awareness Training Records
   - Maintenance/Custodial Staff
   - Personnel Medical Records Respiratory Protection

6. **Additional Asbestos Material Assessment Reports**
   - Asbestos Sample/Material Location Diagram
   - Asbestos Sample Analysis Data

7. **Additional Asbestos Sample/Assessment Data**

8. **Periodic Surveillance Reports (6-month)**

9. **Three-year Reinspection Reports**

10. **Asbestos Removal Activity/Response Action Recordkeeping**
    - Operations & Maintenance (<3 sq. feet or 3 ln. feet)
    - Small Scale (>3 sq. feet or 3 ln. feet) (<40 ln. feet or 80 sq. feet)
    - Full Scale (>40 ln. feet or 80 sq. feet)
    - Flow Charts to Determine Adequate Response Actions

11. **Operations and Maintenance Plan**

12. **Regulatory Agency Correspondence/Overview of Requirements** (EPA, DEQ, Oregon OSHA)

13. **Certificates (Management Planner, Building Inspector, Project Designer, NVLAP) NIOSH 582, 7400 Method Certification**

INTRODUCTION

Each LEA must develop an asbestos management plan for school buildings under its authority. This plan is to be submitted to the state Governor (or designee), no later than October 12, 1988. LEA's are required to begin implementation of their management plan by July 9, 1989 and to complete in stages. A copy of the plan must be available in the school administrative offices for viewing by the public.

A management plan should be used as a guidance document for asbestos control. A brief description of the elements of the plan as required by AHERA follows. Other sections of the notebook provide detailed information on the various components of the plan.

Management plans should be considered working documents. They set forth a framework for short and long-term actions to be taken by the LEA to protect building occupants. They must be kept up to date (e.g., response actions, dates and results of surveillance).

This survey was performed using non-destructive sampling methods in order to maintain the integrity of occupied spaces. Any unknown or suspect materials revealed during renovation or demolition of the structure should be tested for asbestos content prior to their disturbance.

The management plan represents the combination of the Inspection Report with a game plan for responding to and maintaining the asbestos containing materials. It is a flexible document that you can easily update. It is designed on an AHERA format and currently exceeds state and federal requirements for managing asbestos materials in commercial properties.

The Management Plan is a document the Owner must continue to use and update. The notebook will be an aid for the following activities:

Identifying and performing initial cleaning
Scheduling response actions
Training your personnel
Maintaining the asbestos containing materials in place
Learning to budget for asbestos activities
Setting building asbestos policies
Notifying affected parties
Keeping records

Remember this plan is not an encyclopedia of all asbestos facts, nor a recitation of the many rules affecting asbestos, nor a substitute for training.

CONCLUSION

The management plan should provide elaboration on all aspects of the plan. For example, in selecting a response action, justification is necessary for the particular choice, rationale for its prioritization and explanation of the resources required to implement the response should appear in the plan.

LOCAL EDUCATION AGENCY (LEA) GENERAL RESPONSIBILITIES UNDER AHERA

Pursuant to Section 763.84 and Section 763.93 of the EPA Asbestos in Schools Regulation (40 CFR Part 763), each management plan must contain a true and correct statement, signed by the LEA designated person, that certifies that the general LEA responsibilities have been met. This form is provided to assist you in complying with this portion of AHERA.

LEA Name:	West Linn / Wilsonville School District
LEA Address:	Stafford Rd. West Linn, OR 97068
Designated Person Name:	Tim Woodley
Designated Person Address:	Stafford Rd. West Linn, OR 97068
Phone number:	(503)638-9869

ASSURANCES

1. This AHERA management plan was developed and has been submitted pursuant to the Asbestos Hazard Emergency Response Act of 1986, Public law 99-519; and the United States Environmental Protection Agency Rule: Asbestos Containing Materials in Schools, 40 CFR Part 763; and the undersigned does hereby certify that the LEA has and will ensure the following:

2. The activities of any persons who perform inspections, reinspections, and periodic surveillance, develop and update management plans, and develop and implement response actions, including operations and maintenance, are carried out in accordance with Part 763.

3. All custodial and maintenance employees will be properly trained as required in Part 763 and all other applicable Federal and/or State regulations (e.g., the Occupational Safety and Health Administration Asbestos Standard for Construction, the EPA Worker Protection Rule, or applicable State regulations).

4. All workers and building occupants, or their legal guardians, are informed at least once each school year about inspections, response actions, post-response action activities, including periodic reinspection and surveillance activities, that are planned or in progress.

5. All short-term workers (e.g., telephone repair workers, utility workers, or exterminators) who may come in contact with asbestos in a school are provided information regarding the locations of ACBM and suspected ACBM assumed to be ACM.

6. All warning labels are posted in accordance with Section 763.95.

7. All management plans are available for inspection and notification of such availability has been provided as specified in the management plan under Section 763.93(g).

8. The undersigned person designated by the LEA pursuant to Section 763.84(g) (1) has received adequate training as stipulated in Section 763.84(g) (2).

9. The LEA has and will consider whether any conflict of interest may arise from the interrelationship among accredited personnel and whether that should influence the selection of accredited personnel to perform activities under Part 763.

Signature Tim L. Woodley Date: 11-1-99

LEA Designated Person, pursuant to
40 CFR 763.93(i) and 763.84

INTRODUCTION

Each LEA must develop an Asbestos Management Plan for school buildings under its authority. This plan is to be submitted to the state Governor (or designee), no later than October 12, 1988. LEA's are required to begin implementation of their management plan by July 9, 1989 and to complete in stages. A copy of the plan must be available in the school administrative offices for viewing by the public.

A Management Plan should be used as a guidance document for asbestos control. A brief description of the elements of the plan as required by AHERA follows. Other sections of the notebook provide detailed information on the various components of the plan.

Management plans should be considered working documents. They set forth a framework for short and long-term actions to be taken by the LEA to protect building occupants. They must be kept up to date (e.g., response actions, dates and results of surveillance).

This survey was performed using non-destructive sampling methods in order to maintain the integrity of occupied spaces. Any unknown or suspect materials revealed during renovation or demolition of the structure should be tested for asbestos content prior to their disturbance.

The Management Plan represents the combination of the Inspection Report with a game plan for responding to and maintaining the asbestos containing materials. It is a flexible document that you can easily update. It is designed on an AHERA format and currently exceeds state and federal requirements for managing asbestos materials in commercial properties.

The Management Plan is a document the Owner must continue to use and update. The notebook will be an aid for the following activities:

Identifying and performing initial cleaning
Scheduling response actions
Training your personnel
Maintaining the asbestos containing materials in place
Learning to budget for asbestos activities
Setting building asbestos policies
Notifying affected parties
Keeping records

Remember this plan in not an encyclopedia of all asbestos facts, nor a recitation of the many rules affecting asbestos, nor a substitute for training.

CONCLUSION

The Management Plan should provide elaboration on all aspects of the plan. For example, in selecting a response action, justification is necessary for the particular choice, rationale for its prioritization and explanation of the resources required to implement the response should appear in the plan.

The Management Plan is viewed as a planning or working document. It not only sets out a course of action for the LEA, but it becomes documentary evidence of progress in implementing asbestos control options. Give the cost and financing information contained in the plan, it provides guidance on matters such as annual and long-term school budgeting and community tax and bond issues. In addition, the Management Plan will help school administrators identify potential funding sources to implement their asbestos control program.

LEA DESIGNATE

Tim Woodley
West Linn-Wilsonville School District 3Jt
22201 S.W. Stafford Road
Tualatin, OR 97068

The Local Education Agency Designate is required by the Final Rules to ensure the School's continuing compliance with the AHERA requirements. The LEA Designates specific requirements are described in 40 CFR Section 763.84 of the Final Rules.

SCHOOL ASBESTOS COORDINATOR

_____
_____
_____
_____

As is option, the School may appoint a school asbestos coordinator to ensure compliance within a specific school. The coordinator's responsibilities parallel those of the LEA Designate.

LEA DESIGNATE DOCUMENTATION

The school district must designate and train a person to ensure compliance with the requirements of Section 763.84 of the Final Rules. The responsibilities of the LEA Designate's signature and statement of acceptance appears in the last TAB of the Management Plan. If the school board or superintendent has formally assigned the LEA Designate with a letter, memorandum, or similar conveyance, a copy should be filed under this Tab.

The West Linn-Wilsonville School District's Superintendent Roger L. Woehl acknowledges the undersigned person to act as the LEA Designate throughout the West Linn-Wilsonville School District.

Signature: Roger L Woehl

Date: 11/1/99

LEA DESIGNATE TRAINING

Course Name: AHERA DP TRAINING

Training Date: 10-14-99

Total hours: _____

Description: _____

_____

_____

LEA DESIGNATE RESPONSIBILITIES

Responsibilities are listed in the federal register included in this section.

Summary of Asbestos Containing Building Materials (ACBM) in this facility.

This section reflects requirements outlined in 40 CFR 763.85 (vi) (B) (c) (d) and (e)

The following subsections contain this required information:

- AHERA General Data Sheet
- Locations and quantities of Asbestos Containing Building Materials
- Asbestos location diagrams
- Consultants cost estimates for asbestos removal

SAMPLE/MATERIAL LOCATION DIAGRAMS

As part of the AHERA Asbestos Inspection the locations of samples collected are recorded on building diagrams. In addition to the sample locations, specific damage areas are recorded where found. The following pages provide the sample location diagrams for the School District. These drawings are organized in the same manner as the inspection/management plan data, i.e., campus one building one is first.

The title block contains the specific state, district, campus, and building or code with a 12 digit number. Next is the District Name, the Campus Name, and finally the Building Name. The next block provides the date the drawing was made, the street number and finally the drawing number.

Location of Caution Label: The AHERA regulations require the use of labels indicating the presence of Asbestos Containing Building Materials (ACBM). The label is to be placed on or near ACBM in routine maintenance areas in all school buildings. When this label is applied in the field the inspector identifies its' location on the sample location diagram. On the drawing, the label symbol contains information about its placement within the routine maintenance area so that it may be readily found by the LEA. The label states the following:

CAUTION
ASBESTOS. HAZARDOUS.
DO NOT DISTURB
WITHOUT PROPER TRAINING
AND EQUIPMENT

The presence of sample numbers, crosshatching and damage areas does not mean that all of the areas indicated contain asbestos. These location diagrams are a record of the field inspection only and are meant to show where samples were taken and what areas may be affected if asbestos is present. The determine which areas are affected, a review of the Inspection/Management Plan Data and the Petrographic Results contained in Sections 4 and 5 should be made. If desired, the location diagrams can be highlighted by the school district's asbestos coordinator to indicate the presence of asbestos containing material.

AHERA GENERAL DATA SHEET

SECTION 01314
CERTIFICATION OF NO HAZARDOUS MATERIAL

No final payment shall be made until the Contractor shall file with the Owner, prior to acceptance of the Work, a notarized Certification of Compliance in the following form:

******

"TO THE BEST OF MY KNOWLEDGE NO HAZARDOUS MATERIAL IS USED IN THE CONSTRUCTION OF THIS PROJECT. MATERIAL SAFETY DATA SHEETS WILL BE PROVIDED AS REQUESTED BY THE OWNER FOR ALL MATERIALS WHICH MAY BE QUESTIONED IN THE FUTURE."

In WITNESS WHEREOF, the undersigned has signed and sealed this instrument this 8th day of JANUARY, 2001.

ASBESTOS LOCATION DIAGRAMS

SAMPLE / MATERIAL LOCATION DIAGRAMS

As part of the AHERA Asbestos Inspection the locations of samples collected are recorded on building diagrams. In addition to the sample locations, specific damage areas are recorded where found. The following pages provide the sample location diagrams for the School District. These drawings are organized in the same manner as the inspection/management plan data, i.e. campus one building one is first.

The title block contains the specific state, district, campus, and building or code with a 12 digit number. Next is the District Name, the Campus Name, and finally the Building Name. The next block provides the date the drawing was made, the street number, and finally the H-K drawing number.

The drawing uses several symbols and cross-hatching patterns to illustrate the key elements of the survey information.

SAMPLE LOCATION: The specific locations of samples are found on a point on the drawing leading to a symbol indicating the sample number and the Bulk Sample (BS) Code, which represents the type of material sampled. The Bulk Sample Code descriptions used are as follows:

BS CODE	DESCRIPTION	BS CODE	DESCRIPTION
0	Unknown	26	Transite Pipe
1	Acoustical Plaster	27	Transite Hood
2	Acoustical/Thermal Insul	28	Asbestos Pads
3	Hardwall/Ceiling Plaster	29	Asbestos Glove
4	Vinyl Floor Tile	30	Asbestos Rope
5	Pipe Covering	31	Raw Asbestos
6	Corrugated Pipe Covering	32	Electrical Wiring
7	Wrapped Paper Pipe Cover	33	Fire Hose
8	Boiler/Tank Insulation	34	Fire Door
9	Breeching/Exhaust Packing	35	Fire Suit
10	Woven Paper/Tape	36	Fire Brick
11	Drop or Lay-in Panel	37	Lab Counter Top
12	Acoustical Tile (1x1)	38	Fiber Frack Kiln
13	Fire or Stage Curtain	39	Tongs
14	MUP on Non-Suspect Pipe	40	Poured in Insulation
15	MUP on Pipe Covering	41	Contaminated Soil
16	MUP on Corr. Pipe Cover	42	Tectum
17	MUP on Wrapped Pipe Cover	43	Floor Underlayment
18	Fireproofing	44	Hard Grout
19	Vibration Joint Cloth	45	Mortar
20	Interior Duct Insulation	46	Blown or Scratch Coat
21	Exterior Duct Insulation	47	Oven/Autoclave Lining
22	Blown-in Insulation	48	Brake Lining
23	Stored Insulation	49	Theatre Curtain
24	Debris	50	Transite Siding
25	Gasket	99	Other

DAMAGE AREAS: When the inspector encounters a section of material in a Unified Sampling Area (USA) which contains localized damage in worse condition than the remainder of the same material contained in this USA, a Damage Area indicator is placed on the drawing. This symbol contains specific information about the damaged area.

Type of Material - The BS Code of the material is indicated so that the type of material can be determined. See the previous section for the listing of the BS codes used.

Quantity - The quantity of material which was found to be damaged is also indicated.

Location - The location of the localized damage is indicated in the symbol. This provides assistance in identifying where the damage can be found.

Response Action - This is the code for the recommended AHERA response action. The following codes are used:

1. Isolate Area Immediately
2. Gross Removal
3. Glove Bag Removal
4. Encapsulation
5. Enclosure
6. Repair and O&M
7. O&M and Monitor

CROSSHATCHING: Crosshatching patterns are used to detail the location of ceiling and floor material suspected of containing asbestos. There are three patterns used:

Floor Tile - This pattern is used to indicate floor tile and sheet flooring material suspected of containing asbestos.

Drop / Lay-in, Accoustical - This pattern is used to indicate the locations of a variety of ceiling tiles including, but not limited, to 1' x 1' and 2' x 4' lay-in panels.

Spray / Trowel Applied Materials - This pattern is used to indicate the presence of spray and trowel applied materials such as fireproofing and acoustical plaster.

LOCATION of CAUTION LABEL: The AHERA regulations require the use of labels indicating the presence of Asbestos Containing Building Material (ACBM). The label is to be place on or near ACBM in routine maintenance areas in all school buildings. When this label is applied in the field the inspector identifies its' location on the sample location diagram. On the drawing, the label symbol contains information about its placement within the routine maintenance area so that it may be readily found by the LEA. The label states the following.

CAUTION
ASBESTOS. HAZARDOUS.
DO NOT DISTURB
WITHOUT PROPER TRAINING
AND EQUIPMENT

The presence of sample numbers, crosshatching, and damage areas does not mean that all of the areas indicated contain asbestos. These location diagrams are a record of the field inspection only and are meant to show where samples were taken and what areas may be affected if asbestos is present. To determine which areas are affected, a review of the Inspection / Management Plan Data and the Petrographic Results contained in Sections 4 and 5 should be made. If desired, the location diagrams can be highlighted by the school district's asbestos coordinator to indicate the presence of asbestos containing material.

PLAN DISTRIBUTION/NOTIFICATION

This section reflects requirements outlined in 40 CFR 763.84 & 763.93 (10)

The following subsections contain this required information:

- Annual (employee) notification records.
- Annual (parent/legal guardian/occupant/employee) notification records

ACTION: You must send an annual notification to parent, teacher, and employee organization.

Short-term workers must be informed as to the location of ASBM in the school building.

FORMS: N/A

PLAN DISTRIBUTION/NOTIFICATION

AHERA requires that the LEA notify all building occupants, workers, contractors, and parents or legal guardians of school children. There are three key elements to the Notification program and they are Initial Notification, Annual Notification must include a discussion of:

- Inspections
- Re-inspections
- Surveillance
- Response actions
- Post-response action activity
- Availability of management plant

The LEA designate can realize benefits from the notification program because informed occupants are less likely to disturb the material and will report problem situations.

Contract workers (short-term) who will come in contact with ACBM during their work must be informed of the presence of ACBM. In addition, under various right-to-know laws, all workers must be informed of the potential for contact with hazardous materials such as asbestos.

There are three key areas of notification:

INITIAL NOTIFICATION OF THE MANAGEMENT PLAN AVAILABILITY

At the implementation of the Management Plan, notification to parent, teacher and employee organization of the availability of the plan is to be enacted. Enclosed is a list of steps that are to be taken to provide adequate notifications.

ANNUAL NOTIFICATION

On an annual basis, the parent, teacher and employee organization shall receive notification reiterating the availability of the plan and other asbestos activities that will occur or have occurred. The annual notification is included in the steps to be taken.

NOTIFICATION OF THE AVAILABILITY OF THE MANAGEMENT PLAN

The Initial and Annual Notification should follow these procedural steps:

Step 1: Notify in writing the president of the parent, teacher and employee organization about the availability of the management plan. This is to be done when the plan is submitted to Governor's designate (October 1988).

Step 2: If in the event there are no organizations for either parent, teachers or employees, other logical information devices will be used. A newspaper notice is an acceptable media to comply to the AHERA rules.

Step 3: The notification will explain the location and availability of the management plan, at no cost to review and how to receive a copy (i.e., $.10 per page black & white or $50 per copy). A summary of each school inspection report may be included in the letter initially and annually if desired.

Step 4: The notification will include all response actions scheduled, all response actions previously undertaken in the past calendar year, notice of inspections, periodic surveillance and other pertinent asbestos management activities that are planned or in progress.

Step 5: Recordkeeping: A dated copy of each notification is to be kept. In addition, a signed receipt from a certified letter should be kept (optional). Keep all records under TAB 13.

ANNUAL (EMPLOYEE) NOTIFICATION RECORDS

EMPLOYEE NOTIFICATION LETTER

Dear Employee:

An environmental health & safety consulting firm completed a study to determine the presence, location, and quantity of asbestos-containing materials at the West Linn-Wilsonville School District. The facilities were inspected in accordance with the Environmental Protection Agency guidelines for asbestos-containing materials (i.e., 40 CFR 763). This study is available for your review in the main office of each facility.

Asbestos poses a widespread concern for everyone since it was used extensively in buildings and homes constructed up to the late 1970's for insulation, acoustical purposes, and/or fire retardation. During that time, asbestos was a government-approved building material and considered almost a miracle substance because of its fire retardant and insulating properties. Airborne asbestos fibers are a health hazard and have been linked with different types of abdominal and lung cancers. We are, therefore, committed to taking corrective measures, when and where appropriate, and our asbestos control efforts will be based on the advise of experts knowledgeable in asbestos abatement techniques.

It is very important that all maintenance, custodial, and production employees read carefully the list of known and suspect asbestos-containing materials located in the main office. Please note the location of asbestos-containing material and avoid any unnecessary disturbance of the material. West Linn-Wilsoville School District has also designed an Operations & Maintenance Plan to ensure that the remaining asbestos-containing materials at our facility remain in good condition. The Asbestos Operations and Maintenance Plan includes specific requirements for the safe handling and removal of asbestos-containing material and should be consulted prior to beginning any work on or near asbestos-containing materials.

By signing this document, you are acknowledging only that you have been informed of the known asbestos-containing materials in the West Linn-Wilsonville School District, the Asbestos Operations & Maintenance Plan for safe handling of asbestos-containing materials, and that you are aware that asbestos may produce adverse health effects if proper control techniques are not used. Our goal is to provide everyone with training and knowledge so that exposure to our employees and contractors does not occur. Our policy of hiring licensed asbestos abatement contractor to perform all work involving asbestos-containing materials will continue.

Please sign and return a copy of this letter. If you have any questions or concerns, please contact me.

Sincerely,

Asbestos Program Manager

ANNUAL (PARENT/LEGAL GUARDIAN/OCCUPANT) NOTIFICATION RECORDS

West Linn Wilsonville School District 3JT

West Linn-Wilsonville School District 3JT

ADMINISTRATION BUILDING

P.O. Box 35 · West Linn, Oregon 97068 · (503) 638-9869 or Fax (503) 638-9878

January 4, 2000

Dear Parents and Students:

In our efforts to comply with Federal and State requirements regarding asbestos management; and to ensure a safe learning environment for the patrons of West Linn-Wilsonville Schools, please be advised that all district facilities except Boeckman Creek Primary, Athey Creek Middle, Wilsonville High and Rosemont Ridge Middle contain varying amounts of known asbestos-containing materials.

The District employs the services of a professional asbestos management firm who has completed a study to determine the presence, location and quantity of asbestos-containing materials in all district facilities. The facilities have been recently re-inspected in accordance with the Environmental Protection Agency guidelines for asbestos-containing materials and this study, as well as all historic data regarding asbestos, is available for your review in the main office of each facility.

West Linn-Wilsonville Schools is committed to providing safe schools for all students and employees in our district and we thank you for your attention to this important issue.

Sincerely,

DEPARTMENT OF OPERATIONS

Tim K. Woodley, Director
Asbestos Program Manager

NOTIFICATION & TRAINING OF EMPLOYEES, CONTRACTORS/SHORT-TERM WORKERS

This section reflects requirements outlined in 40 CFR 763.92 (a)(l), (2)(iv) & 763.84 (b)

The following subsections contain this required information:

Contractor/Employee Notification Letter
Contractor Notification/Acknowledgement
Contractor Asbestos Awareness Training Records

Notification and Labeling

Once the presence of ACM has been established in a facility a notification and warning program should be initiated. The notification and warning program serves two purposes

It alerts affected parties to a potential hazard in the building
It provides basic information on avoiding the hazard

Building occupants, employees and others who are aware of the presence of ACM are less likely to disturb the material and cause fiber release. Note, however, that the AHERA Rule requirements for notification are limited to sending written notices to employees, parent and teachers (or organizations representing these groups if such organization exist.) The notices must announce the existence and location of the management plan.

Notification

Notification of building occupants and other affected individuals can be accomplished several ways. Two common techniques are

Distributing notices
Holding awareness or informational seminars

The distribution of notices is an effective means of altering building occupants about the presence of asbestos. Memos or letters can be tailored to specific parties, and verification that notification was received is easily accomplished. For example, in a large multi-tenant facility, the building owner can send detailed reports to the management of individual companies, while distributing similar informational memos to building occupants.

Awareness or informational seminars can be designed to follow written notification. They serve to expand on relevant information while allowing those attending to raise questions. These seminars can be developed at the same time as other training programs, and typically last no more than several hours.

Regardless of notification format chose, building occupants could be provided with the following information:

What asbestos is and how it is typically used
Health effects of associated exposure
What type(s) of ACM are present in the facility
The exact location(s) of these materials
How individuals can avoid disturbing ACM
How to recognize and report damage

SHORT-TERM WORKER NOTIFICATION

Information regarding the location of ACBM must be provided for all short term workers who come into the building according to the AHERA Final Rules. To comply with this requirement, LEA should inform all short-term workers that the management plan must be reviewed prior to working in the building.

This can be accomplished by the following:

All workers are to report to the school administrative office prior to starting any activities, review the plan, and sign a statement that they have done so.

CONTRACTOR NOTIFICATION LETTER

CONTRACTOR NOTIFICATION LETTER

West Linn-Wilsonville School District hired an environmental health & safety consulting firm to complete a study to determine the presence, location, and quantity of asbestos-containing materials at the West Linn-Wilsonville School District. Our schools were inspected in accordance with Environmental Protection Agency guidelines for asbestos-containing materials (i.e., 40 CFR Part 763). This study is available for your review in the Central Records Library.

The purpose of this letter is to advise you as to where the known asbestos-containing materials are located at the West Linn-Wilsonville School District, and to refer you to the Asbestos Survey for identification of the presence, location, and quantity of asbestos-containing materials throughout our facility. The survey is located in the Main Office and it is essential that you familiarize yourself in the contents of the survey and the asbestos described in the Operations & Maintenance Plan prior to beginning any work in this facility.

The West Linn-Wilsonville School District has an Operations and Maintenance Plan which provides our employees and contractors with the proper knowledge to institute safe practices for the elimination of potential airborne fibers. One key element of this program includes periodic air testing to ensure that asbestos fiber concentrations are maintained well below the EPA indoor air quality level. Whenever known or suspected asbestos-containing materials are impacted, air quality testing will be conducted.

By way of background, the term "asbestos" describes a group of minerals, including actinolite, amosite, anthophyllite, chrysotile, crocidolite, and tremolite that are related to each other as fibrous inorganic hydrated mineral silicates. These minerals have been valued as a natural resource with hundreds of applications in manufacturing, construction and consumer products. Their fibrous forms allow them to be made of cloth, felt, gaskets, rope or to be used for reinforcement in cements, asphalt, and plastic. They are nonflammable, withstand high temperature and have a high-tensile strength. Three forms of asbestos products are typically found in buildings 1) surfacing materials; 2) thermal materials; and 3) miscellaneous materials such as ceiling tiles, floor tiles and shingles.

Asbestos poses a widespread concern for everyone since it was used extensively in buildings and homes constructed with insulation, acoustical treatments and/or fire protection. Asbestos was installed as a government-approved building material and was considered almost a miracle substance because of its many physical properties. However, airborne asbestos fibers are a health hazard and have been linked with different types of abdominal and lung cancers. We are therefore committed to taking corrective measures wherever appropriate, and our asbestos control efforts will be based on the advice of experts knowledgeable in asbestos abatement techniques.

Asbestos fibers tend to be retained by the lungs and can cause a variety of diseases, some of which are not evident for 20 years or more after initial exposure.

If you have any questions or concerns, please contact the APM, Tim Woodley, at: (503) 673-7041.

Thank you in advance for your cooperation.

Sincerely,

Asbestos Program Manager

CONTRACTOR / NOTIFICATION / ACKNOWLEDGMENT

Contractor Notification / Acknowledgement

The **West Linn-Wilsonville School District** facilities have been determined to contain asbestos. Your work may bring you into close proximity to known or suspected asbestos-containing materials. Please refer to the Asbestos Building Survey and List of Routine Maintenance Areas for descriptions of asbestos-containing material in the specific areas you will be working in.

> WORKING WITH ASBESTOS CAN BE DANGEROUS. INHALING ASBESTOS FIBERS HAS BEEN LINKED WITH VARIOUS TYPES OF CANCER. IF YOU SMOKE AND INHALE ASBESTOS FIBERS, THE CHANCE THAT YOU WILL DEVELOP LUNG CANCER IS GREATER THAN THAT OF THE NON-SMOKING PUBLIC.

Disturbance of the asbestos-containing materials may cause release of asbestos fibers into the air. The work you are about to perform should not disturb and/or damage these materials. Any such activity is prohibited without the use of engineered control procedures and employees trained in their use (DEQ certified asbestos abatement workers and/or supervisors). An asbestos work order must be granted by the **LEA** before performing any task that might result in the disturbance of asbestos-containing materials. The only contractors that are permitted to intentionally disturb asbestos containing material are those that have received an Oregon Asbestos Abatement Contractor license.

By signing this document you are acknowledging that you have been informed of the known locations and health hazards associated with asbestos-containing materials in the **West Linn-Wilsonville School District.** You are also acknowledging that you understand that only licensed asbestos abatement contractors and certified asbestos abatement employees may intentionally disturb asbestos-containing material. If you encounter damaged materials that you believe might contain asbestos, you are responsible for notifying the APM prior to any activities that might results in the release of asbestos fibers.

CONTRACTOR ASBESTOS AWARENESS TRAINING RECORDS

TRAINING

This section reflects requirements outlined in 40 CFR 763.84 (2), 763.92 (a) (v), (2)

The following subsections contain this required information:

- LEA Designate/Asbestos Awareness Training Records
- Maintenance/Custodial Staff
- Personnel Medical Records (if applicable)

ACTION: You must train your custodian and maintenance employees. Prior to the start of the O & M Plan, there is a 2 hour awareness training and 14 additional hours of training for workers who may come in contact with asbestos.

FORM: N/A

EMPLOYEE AND WORKER TRAINING

Training workers to use special procedures and work practices is a key to a successful asbestos management program. The training requirements differ between OSHA and AHERA, primarily in that OSHA has no specific number of training hours. There is also a difference in various state training programs.

All LEA maintenance and custodial staff, as well as contract workers, who work in a building containing ACBM are required to receive at a minimum a two-hour awareness training seminar. Any of these workers who will disturb ACBM must receive an additional 14 hours of training. Workers engaged in large-scale, long-duration ACBM activities in K-12 schools must receive 24 hours of training and become "Accredited Asbestos Workers". They must also receive an annual 8-hour refresher course. In Washington State the training program is 36 hours for "Accredited Workers".

The time intervals for the awareness education and 14 hours additional training of the employees are not specified by EPA regulations. However, it is highly recommended that both the two-hour awareness seminar and the additional 14 hours of training be given annually. All employees must receive the two-hour awareness training within 60 days of beginning work or, if they will come into contact with ACBM, before they begin their activities. Intervals should be checked for compliance with state and local rules and regulations. Many private companies and LEAs have all workers who contact ACBM attend the 24-hour training to provide the highest level of worker training. A sample employee training records form is included in this section.

LEA DESIGNATE

The local Education Agency designated person (asbestos program manager) is the responsible person on behalf of the school district to ensure that the management plan and the AHERA rules are followed and, even more importantly, to protect the health of the building occupants and the environment.

Every LEA must designate a person and train them with the basic knowledge of the following:

--Health effects of asbestos
--Detection, identification and assessment of asbestos containing materials
--Options for controlling asbestos containing building materials
--Asbestos management programs
--State and Federal regulations

There is no approved course or length of training set by the EPA. Some people are of the opinion that the LEA designate should take a 5 day Accredited Inspector/Management Planner course. This

TRAINING
is the highest level of accredited training for non-workers. Because the LEA designate is the most responsible party in the asbestos management process, taking this course when available makes sense. There are 3 day courses to train LEA designates and even 1 day courses.

TWO-HOUR AWARENESS TRAINING

The required LEA two-hour awareness training program should include the information given to the occupants for the general information sessions and mailings and should include:

--Uses and forms of ACBM
--Health effects of asbestos
--Location of ACBM in building
--Recognition of problems such as damage, deterioration, or delamination of ACM
--Name and telephone number of the APM
--General understanding of the asbestos management program
--Overview of work practices and procedures to be followed by personnel who will
--Contact ACBM

WORKERS WHO CONTACT ACBM

All employees and contract personnel who contact ACBM through cleaning maintenance or emergencies must have at least an additional 14 hours of training (16 hours total). Three types of training for workers who contact ACBM can be identified:

--Training for custodians involved in cleaning and simple maintenance tasks

--Training for maintenance workers involved in general maintenance and more complex repair tasks

--Training for workers who may conduct limited asbestos abatement (removal, enclosure, and encapsulation) or whose work involves direct (intentional) contact with ACBM

All three types of training should include general discussions of the uses and health effects of asbestos, the location of ACBM in the building, the overall asbestos control program, and the asbestos management program.

The additional 14-hour training program should also include:

--Physical characteristics of asbestos

--Methods and procedures for handling and disposing ACBM

--Medical monitoring and surveillance requirements

--Personal protection, including respiratory protection and protective clothing

--Working knowledge of the asbestos management program, including safety, access, and reinspection

--Equipment availability and uses including wet cleaning, HEPA vacuuming, steam cleaning, etc.

--Hands-on training in use of respirators, personal protection, work practices, and fiber control

TRAINING

--Importance of record-keeping and employee record generation requirements

--Requirements for clearing work-order through the APM for of all renovation and ACBM disturbance activities

--Nonasbestos safety considerations

--Training and licensing requirements by state and local agencies

ACCREDITED ASBESTOS WORKER TRAINING

The training requirement for an accredited asbestos worker includes a 24-hour, or three-day course. The course should include lectures, demonstrations, at least six hours of hands-on training, individual respirator fit-testing, course review, and an examination. EPA recommends the use of audio-visual materials to complement lectures where appropriate.

The training course should adequately address the following:

--Physical characteristics of asbestos
--Potential health effects related to asbestos exposure
--Employee personal protective equipment
--State-of-the-art work practices
--Personal hygiene
--Addition safety hazards
--Medical monitoring
--Air monitoring
--Relevant federal, state, and local regulatory requirement, procedures, and standards.
--Establishment of respiratory protection programs
--Course review

The worker must receive a passing grade of 70% on an examination with 50 multiple-choice questions.

TEACHING QUALIFICATIONS

The 2 and 14-hour training programs can be conducted by any qualified person trained in asbestos control and management. The EPA stresses the use of the most qualified people available. The 24-hour training program for workers must be an EPA-accredited training course. A sample form for recording individual worker training is included in this section.

CONTRACT SERVICES

Where custodial and maintenance services are performed under contract with a service company, the building owner must ensure that the service company's staff has been properly trained for working with ACBM. Training will include successful completion of courses on asbestos control and special programs that meet the requirements for the LEA staff discussed above. The company's respirator and medical surveillance programs should be reviewed. In addition, the company performance should be verified with other customers, particularly owners of buildings containing ACBM.

If the service company meets the training and performance requirements, an initial session should be held with the company's supervisors and workers to inform them of the location of ACBM in the building and of all building-specific operating procedures. The APM assumes responsibility for ensuring that the service company adheres to all aspects of the asbestos management program.

PERSONNEL MEDICAL RECORDS (if applicable)

MEDICAL MONITORING **OR-OSHA Division 3 – 1926.1101 (m); (n)(3)**

A medical surveillance program must be made available to workers employed in the construction industry who are:

- exposed to asbestos at or above the PEL (0.1 f/cc – 8TWA) or Excursion Limit (1.0 f/cc – 30 min.) for 30 or more days per year;
  or
- engaged in Class I, II, and/or III asbestos work for 30 or more days per year;
  or
- required by the rules to war a negative-pressure respirator.

All other employees who are or will be exposed to asbestos at or above the action level must be covered by a medical surveillance program.

Medical examinations must be given on the following schedule:

- **prior to assignment** to an area where negative-pressure respirators are worn; or
- within 10 working days following the thirtieth day of exposure **annually thereafter.**
- if an examining physician determines that any test(s) should be more often than the annual schedule.

Examinations must include:

- medical and work history;
- standardized questionnaire; abbreviated questionnaire;
- physical examination;
- chest X-ray (this is based on the doctor's discretion and analyzed by a specialist);
- pulmonary function test; and,
- any other examination deemed necessary.

The employer must maintain an accurate record for each employee, including:

- name and social security number;
- copy of medical examination;
- physician's written opinions;
- any medical complaints related to asbestos;
- maintain the record for 30 years beyond termination

Employee access to information: the employer shall provide a coy of the physician's written opinion to the employee within 30 days from its receipt.

Physicians written opinion: Employers must instruct the physician not to reveal in the written opinion given to the employer specific findings or diagnoses unrelated to occupational asbestos exposure.

RESPIRATORY PROTECTION **OR-OSHA Division 3 – 1926.1101 (h)**

Respirators must be worn under the following conditions:

- during the time necessary to install or implement engineering controls and work practices to bring exposures to below the PEL and/or excursion limit
- in operations where controls are not feasible i.e. maintenance and repair activities
- where controls have not reduced exposure levels below the PEL and/or excursion limit
- in emergencies
- in all regulated areas, and
- whenever employee exposure exceeds PEL and/or excursion limit.
- Whenever employer cannot do an appropriate negative exposure assessment of an asbestos abatement project.

PERIODIC SURVEILLANCE

This section reflects requirements outlined in 40 CFR 763.92 (3) (b) (2) (i-iii)

ACTION: Check the condition of the asbestos-containing materials (ACM) at least every 6 months.

TRAINING: None required; O & M or Inspector suggested.

FORM: Use the form included in this Section.

A well-run asbestos management program must include periodic surveillance of the ACBM. Periodic surveillance is the scheduled observation of asbestos materials to determine if any damage or deterioration occurred since the previous observation. Because much of the ACBM is observed daily by the school staff during normal work and also because many areas are not accessible, slight changes in the condition of the ACBM occurring over time may not be readily apparent.

Some building owners conduct monthly surveillance. AHERA requires surveillance in K-12 schools at no greater than six month intervals, and this is a prudent minimal frequency for any Owner. This periodic surveillance can save the building owner considerable time money, and embarrassment in the event of ACBM deterioration or damage. Moreover, properly conducted surveillance provides a great deal of comfort to building workers and occupants.

SURVEILLANCE PERSONNEL:

AHERA establishes no training requirements for the persons conducting the periodic surveillance. Any employee or contractor selected by the Asbestos Program Coordinator is allowed to conduct the surveillance. Three Rivers Environmental Inc. recommends that the observer either take a 16-hour Operations and Maintenance course or a 3-day inspector course. The individual should be knowledgeable of the building's construction, previous inspections and surveillances, generation of records, conditions to be observed, and personal protections. It is the Owner's responsibility to ensure that the surveillance does not cause an exposure of safety problem for the person conducting this activity.

DATA REQUIREMENTS:

All areas with ACBM or suspected ACBM must be visually examined in each periodic surveillance. A record of the surveillance date and the person conducting the surveillance, as well as any changes in ACBM conditions, must be recorded. This requires the person to be knowledgeable of earlier ACBM conditions. The records generated by this periodic inspection must be filed in the Management Plan at the Owner's administrative office. It is recommended that the reports to be filed in the administrative office be submitted to the Asbestos Program Coordinator for review.

SURVEILLANCE CONCERNS:

The person conducting the periodic surveillance must observe the same major factors that were observed in the original inspection and that were used to assess the material's conditions. The six items to be evaluated are:

- -- Deterioration or delamination of the materials.
- -- Physical damage to the material or adjacent areas.
- -- Water damage of any material in the area.
- -- Air-stream effects
- -- Exposure, accessibility and activity changes.
- -- Changes in building use.

PERIODIC SURVEILLANCE

RECORDKEEPING:

File Periodic Surveillance Reports under TAB 8 and utilize the appropriate form.

COMMUNICATIONS:

Any changes in conditions or notable circumstance should be communicated to the Asbestos Program Coordinator. The updated information is to be included in the Management Plan and in the annual notification letters.

THREE RIVERS
ENVIRONMENTAL, Inc.

June 2, 2000

West Linn-Wilsonville School District
Attention: Tim Woodley
P.O. Box 35
West Linn, OR 97068

Dear Mr. Woodley,

Three Rivers Environmental, Inc. appreciates the opportunity that we had to conduct your AHERA Re-inspection of asbestos containing building materials. This reinspection consisted of the review and updating of all AHERA records under current regulatory guidelines and the inspection and assessment of all asbestos containing materials in eight schools with addition of the Administration Building within West Linn-Wilsonville School District. The review of all AHERA records and the assessments of all asbestos containing building materials were performed by an accredited AHERA Building Inspector and Management Planner.

The following are the "Areas of Concern" for each individual school and the materials that were located that are in need of immediate attention.

West Linn High School-

Material: TSI hard fittings, mag lines over corrugated pipe covering

Assessment noted: 50 hard fittings, 40 ln. ft. under S. wing of high school

Recommended Response Action: Immediately isolate, restrict access, clean-up debris and maintain in an intact and undamaged condition.

Material: MJP on pipe covering (12" O.D.)

Assessment noted: 1 sq. ft. TSI damaged exposed in gym (E. side above landing)

Recommended Response Action: Repair and maintain in an intact and undamaged condition.

West Linn High School cont.

Material: Sheet vinyl

Assessment noted: 290 sq . ft. torn sheet vinyl between cafeteria & stairs to commons area

Recommended Response Action: Abate, repair flooring and replace

Willamette Primary-

Material: TSI hard fittings

Assessment noted: 1 sq. ft., 1 damaged hard fitting, wall intrusion, cracks at hanger location.

Recommended Response Action: Repair and maintain in an intact and undamaged condition.

Wilsonville Primary-

Material: Floor tile, 12x12

Assessment noted: 7 ln. or sq. ft. of tile cracked severely at stress line.

Recommended Response Action: Remove and repair damaged tiles and maintain in an intact and undamaged condition.

Inza R. Wood Primary-

Material: Hard fitting, mag

Assessment noted: 1 hard fitting slightly damaged in mechanical room

Recommended Response Action: Repair and maintain in an intact and undamaged condition.

West Linn High School (Bolton Campus)-

Material: Corrugated pipe covering

Assessment noted: 1 sq. ft. exposed TSI pipe covering in basement storage room

Recommended Response Action: Repair and maintain in an intact and undamaged condition.

Cedar Oak Park Primary-

Material: Vibration joint cloth

Assessment noted: 2 sq. ft. damaged corners in fan room (West)

Recommended Response Action: Remove or repair and maintain in an intact and undamaged condition.

Material: TSI air cell piping

Assessment noted: 1 sq. ft. damaged TSI in boiler room, S. wall

Recommended Response Action: Remove or repair and maintain in an intact and undamaged condition.

Administration Building-

Material: Woven paper tape

Assessment noted: 8 sq. ft. of damaged paper tape on walls in boiler room

Recommended Response Action: Repair or replace and maintain in an intact or undamaged condition.

Subject: AHERA 6 Month Reinspection Areas of Concern::

Dear Mr. Simmons:

Three Rivers Environmental has completed the AHERA 3 Year Reinspection. The list below are areas that need to be addressed in the Operation and Maintenance Plan and scheduled for repair or removal:

Bolton Middle School:	
Boiler Room:	3 sq. ft. previous encapsulation delaminating needs bridging.
Custodial Office:	1 sq. ft. exposed piping. 1 sq. ft. exposed seam.
Hallway/Storage (N. of boiler room)	2 sq. ft. previous encapsulation delaminating needs bridging.
Weight Room:	1 sq. ft. damaged Hard Fitting. 1 sq. ft. exposed seam.
West Linn High School:	
Boiler Room:	3 sq. ft. exposed boiler insulation with debris. 2 sq. ft. exposed cold water piping.
Willamette Primary:	
Elect. Room Below Cafe:	1 sq. ft. exposed Hard Fitting.
Inza R. Wood:	
Kitchen Supply Closet:	2 sq. ft. damaged Hard Fittings.

Should you have questions or comments, please contact me at your convenience.

Respectfully submitted,

Jeff Smith
Three Rivers Environmental

RECORDKEEPING (Asbestos Removal Activity/Response Action Recordkeeping)

This section reflects requirements outlined in 40 CFR 763.91 & 763.94 (d) (e) (f) (g) (h)

The following subsections contain this required information

- Flow charts to determine adequate response actions
- Operations & Maintenance (<3 sq. ft. or <3 ln. ft.)
- Small scale/short duration (>3 sq. ft. or 3 ln. ft.) or (>40 ln. ft. or 80 sq. ft.)

ACTION: All asbestos-related activities must be recorded.

TRAINING: LEA Designate must ensure that program is enacted and maintained.

FORMS: Understand how to use all the recordkeeping forms.

The purpose of the record-keeping system is three-fold:

-- To ensure maximum protection of all persons in the building.
-- To provide detailed, retrievable records of all events.
-- To provide the needed records in event of a law suit.

In essence, the AHERA regulations required that everything done with regards to asbestos in a facility must be documented by the facility's owner so that the training and exposure of all persons involved in the work can be documented and the fate of all ACBM can be determined.

The recordkeeping requirements described in 40 CFR 763.94 are quite explicit in regards to the LEA's recordkeeping responsibilities. Although some records are required to be kept up to six years, they may be required beyond six years (as long as 20 to 40 years) in the event of a law suit. Thus, all records should be maintained in a retrievable state for up to 40 years (or let's just say don't ever throw them away).

Location: Records must be kept in the administrative offices of both the actual building and the LEA. If these are in the same building, it is advisable that a duplicate set of records should be established in a different location in the event of fire or other damage.

The following activities or occurrences require detailed documentation. A brief description is given here. Refer to the appropriate TAB number in the management Plan for exact AHERA requirements and sample forms for compiling information. Narratives of pertinent record keeping data and tab locations.

Tab 10	**Response Actions Selected:** records of all preventative measures, major abatement activities.
Tab 8	**Periodic Surveillance:** conducted at a minimum of six-month intervals to determine any damage or deterioration of ACBM.
Tab 9	**Reinspection:** conducted every three years by an accredited inspector.
Tab 11	**Operations and Maintenance:** initial, periodic and emergency cleanings; minor and major fiber release episodes; maintenance procedures for ACBM.

RECORDKEEPING (Asbestos Removal Activity/Response Action Recordkeeping)

Tab 5	**Medical Surveillance:** annual examination of any person who will contact ACBM in their work. Keep copies of examination forms.
Tab 5	**Training:** 2-hour awareness training for all custodial staff, 14 hours additional for those who will disturb ACBM; recommended annually.

MEMO FOR THE RECORD

Under CFR 40 763.94 and 763.85 (b) (l)

Records of abatement, surveys, inspections and reinspection may be archived and maintained in a centralized location in the administrative office.

All inspection activities and/or asbestos abatement records prior to the May/June 1995 3-year Inspection are stored in a large box in the Asbestos Program Manager's office or some other designated location.

ASN-3 QUARTERLY REPORT FORM USED WITH THE ANNUAL NON-FRIABLE AND FRIABLE NOTIFICATIONS

For DEQ use only
Date Received _____
Project Number _____

Instructions: This form is used in conjunction with Department of Environmental Quality (DEQ) Form ASN-2 and ASN-7 (Annual Notice of Intent to remove smaller friable asbestos projects and annual notice of intent to remove non-friable asbestos projects). This form is used to summarize the projects done using these plans. This Report shall only apply to projects where the scope of each removal does not exceed 40 linear or 80 square feet of friable asbestos removal or for non-friable projects being performed by a School, College, or Facility or where a contractor is performing this work for a School, College, or a Facility. Large friable asbestos removal projects may not be subdivided to accommodate this size limitation.

Due Dates: (per OAR 340-032-5630)	1st Quarter due April 15	3rd Quarter due October 15
	2nd Quarter due July 15	4th Quarter due January 15

Contractor, Facility Owner, School Rep. IRS Environmental of Oregon, Inc. Phone: 693-6388

Quarter and Calendar Year for this Report: 1st Qtr: X 2nd Qtr: _____ 3rd Qtr: _____ 4th Qtr: _____ Year: _____

Mailing Address: 755 SW Dennis Avenue, Hillsboro, Oregon Washington 97123
(Street or PO Box) (City) (County) (Zip)

Contact Person: Bruce Korum Title: President Phone: 693-6388

List of Projects:

In the boxes below, list the smaller friable asbestos removal projects (40 linear or 80 square feet or less) that you performed during the quarter. Or, list the non-friable asbestos removal projects that you performed at a School, College, or Facility during the quarter. (More boxes are on the other side. If you need to report more projects, make copies of the back side of this form

ASBESTOS ABATEMENT SUMMARY
Work Order No.: 1020-67

Job Location: WEST LINN HIGH SCHOOL Floor: EXCAVATION AREA

Project: TSI REMOVAL TUNNEL SYSTEM EXPOSED DURING EXCAVATION OF NW CORNER OF ROTUNDA

For pipe provide: Total linear feet 250 LN FT and pipe size 4"

For other materials provide: Total square feet: _____

Type of ACM: TSI, DEBRIS

Start Date: 9-24-99 Completion Date: 9-24-99

Methods to Control Emissions: WET METHODS

Give name of Contractor of Subcontractor:

Name: KEYSTONE CONTRACTING INC.

Address: 417 NW 209TH STREET

City: RIDGEFIELD State: WA. Zip: 98642

Phone: (360) 887-0868 Contact person: LARRY TINGLEY

Name of Monitoring Lab: THREE RIVERS ENVIORNMENTAL

Anticipated Disposal Site: HILLSBORO LANDFILL, HILLSBORO OR.

Supervisor in charge of job: DALE DEAN

Project Manager: ROBERT MONTGOMERY

Name: _____ Date: 9-24-99 Phone (503) 557-2396

Asbestos Program Manager: JOE SIMMONS

Name: _____ Date: _____ Phone (503) 638-8869

PROJECT MANAGEMENT LOG

1730: ARRIVED AT WEST LINN HIGH SCHOOL TO ASSESS THE AMOUNT OF TSI PIPE TO REMOVE. DALE DEAN, SUPERVISOR, CARLOS MENDOZA, [illegible] ARE THE MEMBERS FROM KEYSTONE ASSIGNED TO ABATE THIS MATERIAL. CERTIFICATION/MEDICALS CURRENT

1740: STARTED/CALIBRATED HV-23 WITH SAMPLE #1 20' SW OF ROTUNDA ON THE CONSTRUCTION SITE.

1745: STARTED/CALIBRATED HV-22 WITH SAMPLE #2 20' W OF ROTUNDA ON THE CONSTRUCTION SITE.
DALE DEAN AND I WALKED OFF THE AMOUNT OF PIPING, EXPOSED AND CONSERVATIVELY PUT THE LENGTH ABOVE 80' L.F. THE PLAN IS TO CUT AND WRAP EXPOSED LINES THEN DIG-OUT WHAT HASN'T BEEN EXPOSED.

SIGNATURE: [signature]

Project Log

THREE RIVERS ENVIRONMENTAL

CLIENT: TRE JOB NO:

ATTN: PURCHASE ORDER NO:

CONTRACTOR: REPORT DATE:

PROJECT: PAGE NO: OF

1830: THE CREW IS CUTTING AND WRAPPING NUMEROUS SECTIONS. THEY HAVE GLOVE BAGGED THE 90'S AND HAVE TAPED OFF THE ENDS SO AS TO FACILITATE CUTTING OF THE LINES.

1900: QUITE A BIT OF ND DEBRIS IS SCATTERED THROUGHOUT THE IMMEDIATE AREA, AND REQUIRES QUITE A BIT OF WEITING AND RETRIEVING. STARTED EL ON CARLOS.

1930 PULLED THE EL SAMPLE OF CARLOS MENDOZA

1945: RE-CALIBRATED AND PULLED SAMPLES #1 AND #2 RESTARTED AND CALIBRATED SAMPLE #5 ON HV-23 AND SAMPLE #6 ON HV-22 SAME LOCATIONS.

2000: CREW IS NOW CUTTING AND WRAPPING LINES WHICH ARE ACCESIBLE, THE LINES WHICH ARE ABOVE GROUND ARE BEING GLOVE BAGGED AND CLEANED AS THEY GO. TO COMPLETE THE JOB WILL REQUIRE THE REMAINING SLAB TO BE PULLED OFF AND THE DEBRIS REMOVED FROM THE CHASE BEFORE ALL OF THE ASSUMED MATERIAL CAN BE REMOVED.

2030: DALE AND JOSE ARE DISCOVERING MORE AND MORE TSI LINE AS THEY PREPARE EXPOSED PIPE TO BE CUT.

2045: CARLOS HAS FINISHED CUTTING ALL THE EXPOSED TSI LINE AND ALL OF THE CREW IS NOW BAGGING AND WRAPPING FREED PIPING TO BE LOADED AND REMOVED.

2100: CREW IS STILL BAGGING MATERIAL AND EXPOSING MORE PIPE.

2130: THE EXPOSED PIPE HAS BEEN CLEANED AND STACKED. TOMMOROW THE EXCAVATION CREW WILL NEED TO PEEL BACK MORE OF THE CEMENT AND EXPOSE THE REMAINING TSI LINES.

2200: THE BAGGING OPERATION IS GOING FINE, WE'VE SLOWED A BIT BECAUSE OF THE AMOUNT OF DEBRIS AND THE REBAR WITHIN THE AREA.

2230: FINAL CLEAN-UP AND LOADING OF DEBRIS IS BEING ACCOMPLISHED. FINAL INSP. WILL FOLLOW.

2245: PREPARING TO DEMOBOLIZE.
2300: DEPARTING THE HIGH SCHOOL

Report by: Robert C. Montgomery

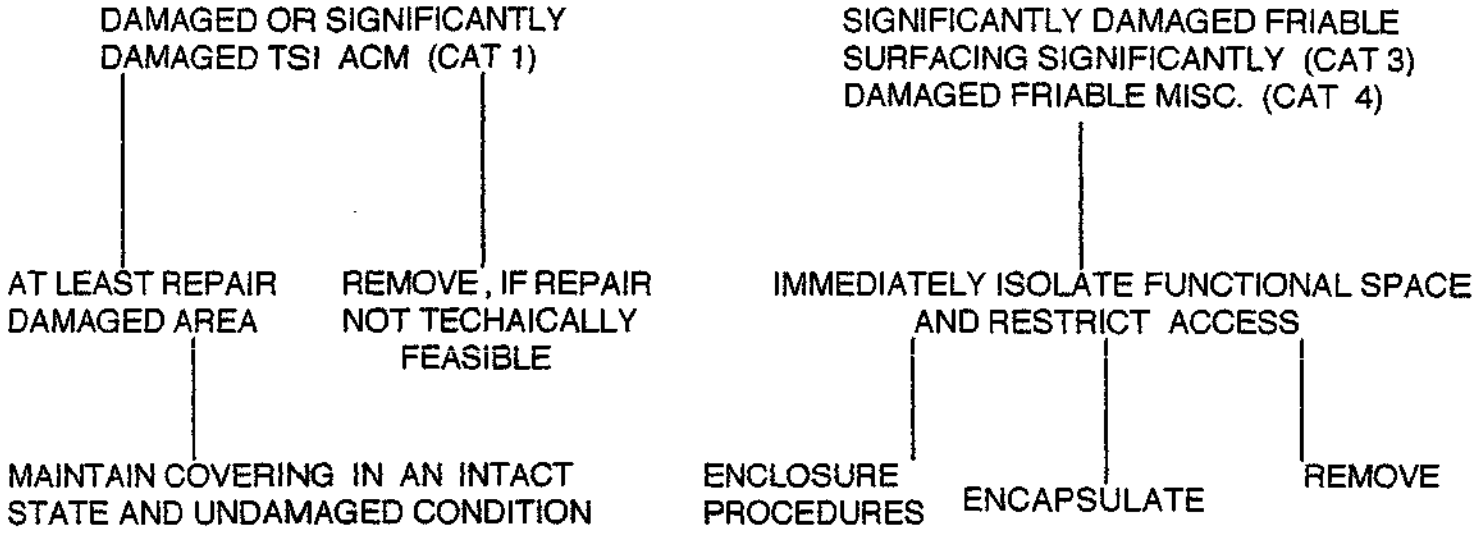
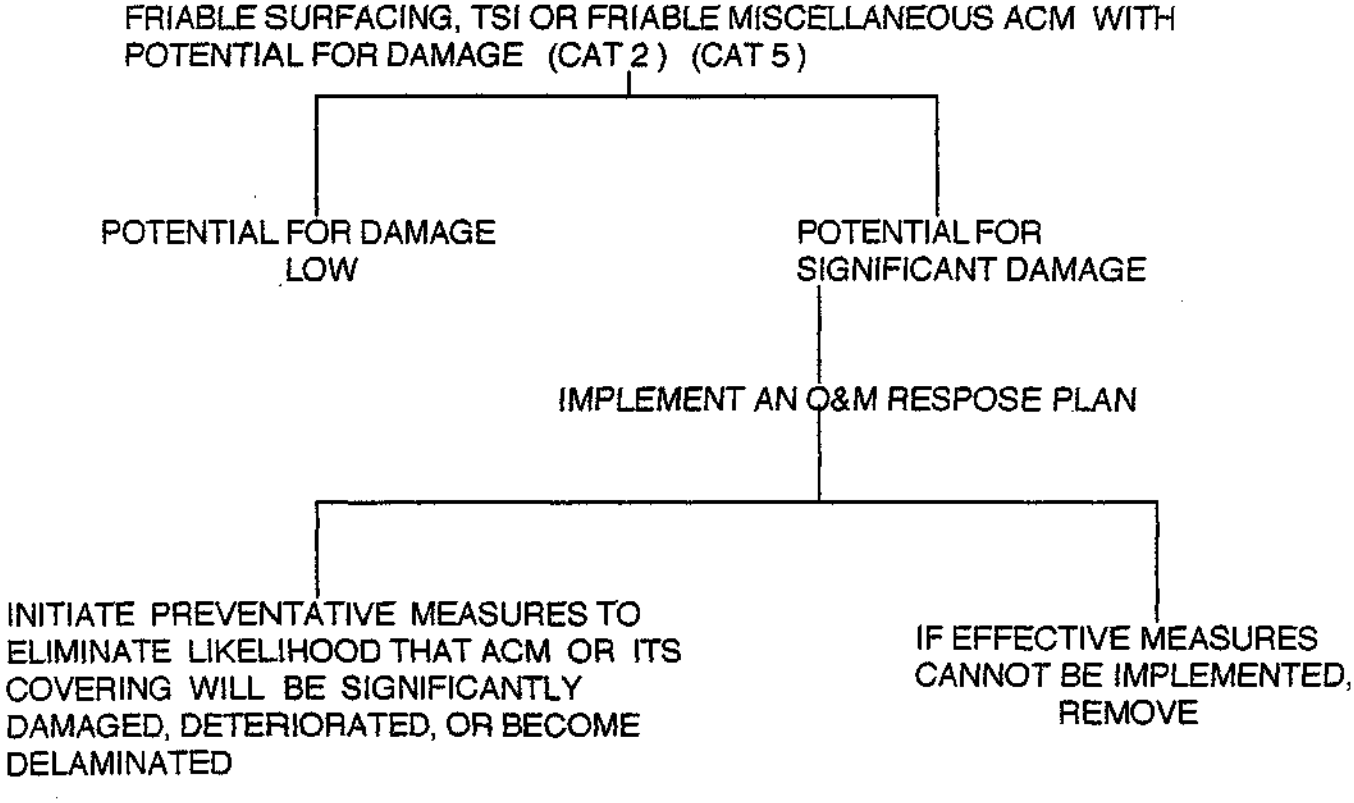
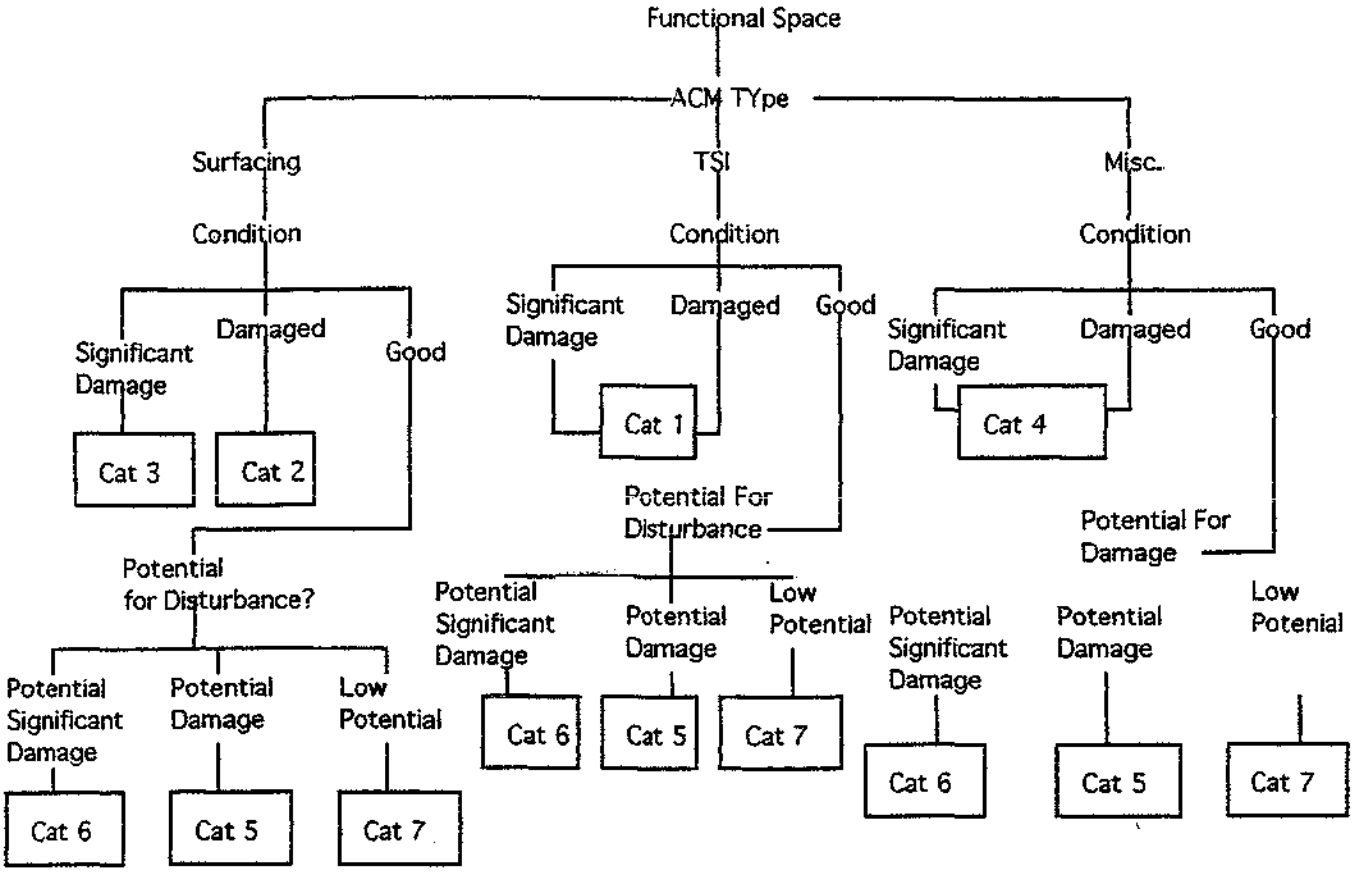
POSSIBLE RESPONSE ACTIONS





Decision Tree for Determination of Physical Assement Categories



Physical Assement Categories

Cat 1 : Damaged or Significatly damaged thermal system insulation ACBM

Cat 2 : Damaged friable surface ACBM

Cat 3 : Significantly damaged friable surfacing ACBM

Cat 4 : Damaged or significantly damaged friable miscellaneous ACBM

Cat 5 : ACBM with potenial for damage

Cat 6 : ACBM with potential for significant damage

Cat 7 : Any remaining friable ACBM or friable suspected ACBM

SMALL SCALE SHORT DURATION

This section reflects requirements outlined in 40 CFR 763.91 and 763.95

The idea of small scale, short duration projects are jobs involving **small quantities** of asbestos. Generally, these are projects where the **primary intent** is not to disturb asbestos and if disturbed, worker exposure levels are not to exceed the **PEL (0.1 f/cc).**

DEQ/EPA

DEQ described small scale short duration activities as maintenance work that does not require a certified supervisor to oversee the work. IF the maintenance work is less than 3 square or 3 linear feet of friable material at any one time then certification is not required, nor is notification to the Department. (OSHA still requires some training).

DEQ does require that all persons disturbing asbestos be certified if they are not doing maintenance work and/or they disturb more than 3 square or 3 linear feet of friable material at any one tie.

DEQ/EPA defines "small scale short duration activities" means a task for which the removal of asbestos is not the primary objective of the job, is less than 3 square or 3 linear feet, including, but not limited to:

- removal of small quantities of insulation on beams or above ceilings;
- replacement of a gasket on a valve;
- installation or removal of a small section of wallboard;
- removal of thermal system insulation not to exceed amounts greater than those which can be contained in a single glove bag.
- minor repair to damaged thermal system insulation which does not require removal
- repair to wallboard;
- replacement of a gasket on a valve;
- repair involving encapsulation, enclosure or removal, to small amounts of friable material in performance of emergencies of routine maintenance activity and not intended solely as asbestos abatement. Such work may not exceed amounts greater than those which can be contained in a single prefabricated mini-enclosure. Such an enclosure shall conform spatially and geometrically to the localized work area, in order to perform its intended containment function.

AHERA (schools K-12) defines small scale job according to EPA's definition listed above. Those activities that will fit inside a single glove bag or mini-enclosure; no more then 3 square or 3 linear feet of ACM. Neither a supervisor or clearances are required, but it does need to be recorded.

OR-OSHA/OSHA

OR-OSHA does not really have a definition for small scale short duration activities that would be recognized as such by DEQ. OR-OSHA's versions of small scale short duration/maintenance activities could be classified as Class III, Class I, or Class II asbestos work.

IF a person is doing maintenance activities then it is **Class III** asbestos work. If a worker intends to disturb TSI or surfacing material, but it is not the primary purpose of the work, then they must use the general work practices outlined OR-OSHA asbestos rules 1926.1101 (g) (9).

- A competent person-who has complete a minimum 16-hour/AHERA type course. (However we are still bound by the DEQ that if we disturb more than 3 square/linear feet then certified supervisor/workers must be used.)

- OR-OSHA specifies that the following work procedure s can be used:
  - standard glovebags on straight runs of piping
  - negative air glovebags
  - negative air glove boxes
  - water spray process systems
  - negative air mini-enclosure
  - approved alternate methods

- OR-OSHA still requires than an adjacent equipment room or area to the regulated area be available for the decontamination of employees and their contaminated equipment. The area needs to be of appropriate size so as not to spread contamination and the floor covered with an impermeable drop cloth. A three chamber decontamination unit/hygiene facility is not required as long as the total work involves less than 25 linear or 10 square feet.

If a person intends to disturb TSI or surfacing material, then it is **Class I** asbestos work regardless of the size of the project. The worker must use the work practices outlined OR-OSHA asbestos rules 1926.1110 (g) (4) & (5).

- A competent person/a supervisor-who has completed an EPA/DEQ five day supervisor course.

- OR-OSHA specifies that the following work procedures can be used:
  - negative pressure exposure (NPE)
  - standard glovebags on straight runs of piping
  - negative air glovebags
  - negative air glove boxes
  - water spray process systems
  - negative air mini-enclosure
  - approved alternate methods
  - a three-chamber decontamination unit/hygiene facility is not required as long as the total work involves less than 25 linear or 10 square feet. An adjacent equipment room or area to the regulated area must be available for the decontamination area.

If a person intends to disturb asbestos material that is not TSI or surfacing material, the it is **Class II** asbestos work regardless of the size of the project. This includes flooring (vinyl, sheet vinyl, asphalt), roofing (shingles built-up, felts), cement asbestos (transite), gaskets, wallboard, construction mastics, etc.

- A competent person/a supervisor-who has completed an EPA/DEQ five day supervisor course. (However DEQ does not require a certified supervisor if the material is kept non-friable.)

- The worker must use the general work practices outlined OR-OSHA asbestos rule 1925.1101 (g) (7) & (8).

- An adjacent equipment room or area to the regulated area must be available for the decontamination area. A three-chamber decontamination unit/hygiene facility is not required.

IV. FORMS

I. INTRODUCTION

With the enactment of the Asbestos Hazard Emergency Response Act regulations, Local Education Agencies are charged with producing a plan of action that will facilitate the safe and effective management of asbestos materials in their school systems. The most effective way of managing the problem is to completely remove all asbestos-containing materials from the building, thus removing the problem in its entirety. In some cases, however, this wholesale removal is not economically feasible or even desirable from a building usage standpoint. When asbestos-containing materials can not be completely removed, a comprehensive Operations and Maintenance Program as required by 40 CFR 763.91 will allow the local education agency to control the asbestos problem until removal of the materials is feasible.

II. DEFINITIONS

Several definitions pertinent to an Operations and Maintenance Program are identified in 40 CFR 763.83. These are as follows:

Asbestos-Containing Material (ACM) when referring to school buildings means any material which contains more than one percent asbestos.

Asbestos-Containing Building Material (ACBM) means surfacing ACM, thermal system insulation ACM, or miscellaneous ACM that is found in or on interior structural members or other parts of a school building.

Asbestos Debris means pieces of ACBM that can be identified by color, texture, or composition; or means dust, if the dust is determined by an accredited inspector to be ACM.

Operations and Maintenance Program means a program of work practices to maintain friable ACBM in good condition, to insure cleanup of asbestos fibers previously released, and to prevent further release by minimizing and controlling damage to friable ACBM.

Fiber Release Episode means any uncontrolled or unintentional disturbance of ACBM resulting in visible emissions.

Friable, when referring to material in a school building, means that the material, when dry, may be crumbled, pulverized, or reduced to powder by hand pressure, and includes previously non-friable material after such previously non-friable material becomes damaged to the extent that, when dry, it may be crumbled, pulverized or reduced to powder by hand pressure.

High-Efficiency Particulate Air (HEPA) refers to a filtering system capable of trapping and retaining at least 99.97% of all non-dispersed particles 0.3 millimeters in diameter or larger.

Removal means the taking out or the stripping of substantially all ACBM from a damaged area, a functional space, or a homogeneous area in a school building.

Repair means returning damaged ACBM to an undamaged condition or to an intact state so as to prevent fiber release.

Response Action means a method, including removal, encapsulation, enclosure, repair, operations and maintenance, that protects human health and the environment from friable ACBM.

Routine Maintenance Area is an area, such as a boiler room or mechanical room, that is not normally frequented by students and in which maintenance employees or contract workers regularly conduct maintenance activities.

III. PROGRAM ELEMENTS

A. WORKER PROTECTION

40 CFR 763.91(b) serves to extend the protection provided by 40 CFR 763.121 (for worker protection during asbestos abatement projects) to employees of local education agencies who perform Operations and Maintenance and repair activities involving ACM who are not covered by the OSHA Asbestos Construction Standard 29 CFR 1926.58. This standard will be adhered to during all Operations and Maintenance or repair operations involving the disturbance of friable ACBM.

During initial cleaning (and additional cleaning as necessary) of all buildings, those employees performing the cleaning will be supplied with and will use the following personal protective equipment:

Disposable Coveralls - a "Tyvek" brand or similar disposable coverall will be worn over the clothes to prevent capturing asbestos fibers on the clothing.

Respirator - an individual personalized respirator will be provided to all workers doing the cleaning. The respirator will be appropriately fit-tested to ensure that it functions effectively for that individual. Each respirator will be supplied with disposable cartridges approved for asbestos dust by NIOSH and will be worn at all times during the cleanup operation.

Following cleanup each day, all used disposable respiratory cartridges and coveralls will be disposed of in six-mil asbestos disposal bags.

B. TRAINING

Prior to the implementation of any Operations and Maintenance provisions of the Management Plan, all members of the maintenance and custodial staff who, during the performance of their duties, may work in a building containing ACBM will receive general awareness training of not less than two hours in duration. As well, similar training will be given to all new maintenance/custodial personnel within 60 days of their start date. As per 40 CFR 763.92 (a)(i-v), the accepted course for this level of training is "Developing an Operations and Maintenance Plan" given by Hall-Kimbrell Environmental Services, Inc., 4840 West 15th Street, Lawrence, Kansas, 66044, and will include as a minimum:

- Information on asbestos, its forms, and uses.
- Information on the health affects of asbestos exposure.
- Locations of ACBM in the school buildings in which they work.
- Recognition of damage, deterioration, and delamination of ACBM.
- Name and telephone number of the LEA person designated to carry out LEA responsibilities under 40 CFR 763.84.
- Availability and location of the Management Plan.

All members of the maintenance/custodial staff who are likely to conduct any activities that may disturb ACBM will receive the previously described general awareness training and an additional 14 hours as required by 40 CFR 763.92 (2)(i-iv). The accepted course for this level of additional training is "Operations and Maintenance Training" given by Hall-Kimbrell Environmental Services, 4840 West 15th Street, Lawrence, Kansas, 66044, and will include as a minimum:

- Descriptions of proper methods of handling ACBM.
- Information on the use of respiratory protection as contained in the EPA/NIOSH Guide to Respiratory Protection for the Asbestos Abatement Industry, September 1986 (EPA 560-OPTS-86-001), and other personal protective equipment and measures.
- The provisions of the following pieces of legislation:
  - 40 CFR 763.91, Appendices A, B, C, D of Subpart E
  - EPA regulations in 40 CFR Part 763, Subpart G
  - EPA regulations in 40 CFR Part 61, Subpart M
  - OSHA regulations in 29 CFR 1926.58
- Hands-on training in the use of respiratory protection, other personal protective equipment and measures, and good work practices.

All types of training will emphasize the necessity to not disturb ACBM or assumed ACBM during routine maintenance activities. Employees will be instructed on the following at a minimum:

- Avoid performing any activities on ACM or assumed ACM that may cause abrasion or physical deterioration of the material. This includes sanding, nailing, drilling, cutting, or otherwise damaging the material.

- Avoid damaging ACM during maintenance activities NOT directly involving the ACM such as installing drapes, carpets, moving furniture, etc.

- To always use a HEPA-vacuum and wet methods to clean up asbestos dust or debris. NEVER use a regular vacuum or dry method.

- To avoid any activities that may inadvertently release asbestos fibers into the air such as removing ventilation filters, drying and/or shaking the filters, and removing suspended ceiling tiles below ACM without taking the proper precautions and using the proper personal protective equipment.

C. INITIAL CLEANING

In accordance with 40 CFR 763.91, all buildings under the direction of the School District will undergo an initial cleaning process prior to commencing with any response actions, with the exception of Operations and Maintenance and repair, as detailed in the Inspection Report/Management Plan Data. The initial cleaning will be done in all areas of all buildings where friable ACBM, damaged or significantly damaged thermal system ACM, or friable suspected ACBM assumed to be ACM, were determined to be present following the completion of an inspection, sampling and analysis program performed in accordance with 40 CFR 763.85 through 40 CFR 763.87.

The following procedures will be followed for the initial cleaning of all appropriate areas of each building:

1. All carpets will be HEPA vacuumed and/or steam cleaned.

2. All horizontal surfaces including sills, frames, door tops, wall protrusions, signs, air vents, suspended light fixtures, and other immovable fixtures will be HEPA vacuumed. Following HEPA vacuuming, the same areas will be wet cleaned in order to remove any residual fibers not picked up during the vacuuming process.

3. All walls will be wet wiped, except for those with sprayed-on or trowelled-on materials or with other applications with high liquid absorption potential.

4. All uncarpeted floors will be wet mopped.

5. All debris, filters, wet mop heads, dust mops, cloths, etc., will be sealed, while still wet, in leak-tight containers. Disposal containers will be six-mil polyethylene bags labelled in such a fashion that they illustrate their usage as asbestos storage containers. These bags will be kept in a single location, in a routine maintenance area in each building and will always be kept closed and tied. When the bag becomes full, it will be tied shut and placed into another six-mil bag and tied again. Full bags will be placed in a 55-gallon steel or fiberboard drum. When full, the drum will be transported to an EPA-approved asbestos landfill site and the material will be disposed of as asbestos-containing waste.

D. ADDITIONAL CLEANING

In all areas where friable ACM exists, normal daily cleaning procedures will be altered as necessary to ensure that fiber entrainment in the air will be minimized. Sweeping and dry mopping will not be allowed in areas containing friable ACM. Until all ACM is removed from ceilings, etc., all daily mopping will be carried out with dampened, disposable mop heads. These mop heads will not be used in asbestos-free areas and will be changed at the end of the day and disposed of as asbestos-contaminated waste in six-mil polyethylene disposal bags. In addition, certain areas will receive additional cleaning on a regular basis as per the O&M supplement at the end of this section.

E. OPERATIONS AND MAINTENANCE ACTIVITIES

1. **Small-Scale, Short Duration Activities and Minor Fiber Release Episodes**

Appendix B to Subpart E of 40 CFR 763.91 defines small-scale, short duration maintenance activities as, but not limited to:

- Removal of ACM insulation on pipes
- Removal of small quantities of ACM insulation on beams or above ceilings
- Removal of ACM gaskets on a valve

- Removal or installation of a small section of drywall
- Installation of electrical conduits through or proximate to ACM.

Small scale is further subdefined in Appendix B of Subpart E as:

- Removal of small quantities of ACM only if required as part of maintenance activity not intended as asbestos abatement
- Removal of ACM thermal system insulation in quantities no greater than can be contained in one glove bag
- Minor repairs to damaged thermal system insulation requiring no removal.
- Repairs to ACM wallboard
- Repairs involving encapsulation, enclosure, or removal, to small amounts of friable ACM only if required in performance of an emergency or a routine maintenance activity not intended as asbestos abatement. The work may not exceed amounts greater than those which can be contained in a single prefabricated mini-enclosure. This enclosure must conform spatially and geometrically to the localized work area, in order to perform its intended containment function.

Section 40 CFR 763.91 (f)(i) defines a minor fiber release episode as the falling or dislodging of less than or equal to three square or linear feet of friable ACBM.

During the process of performing small-scale, short duration asbestos renovation or maintenance tasks, the following procedures will be utilized:

- The area will be isolated with physical barriers, whenever possible, restricting entry only to those persons necessary to perform the task. Warning signs will be posted at all entry points to the area.
- All HVAC ducts, windows, and other sources of air circulation to the area will be sealed. Where necessary, the air handling systems will be shut off or modified to meet this need.
- If a fiber release has occurred, the entire area will be precleaned using those techniques described in *Section C. under Initial Cleaning*. HEPA vacuum and/or wet methods will always be employed for any type of cleaning. All workers directly involved with the cleaning will always use the prescribed personal protective equipment.
- All objects in the area will be removed from the area to protect them from contamination during the maintenance activity. Where it is not possible or feasible to move the objects, the objects will be completely covered with six-mil polyethylene plastic sheeting prior to commencement of the maintenance activity. This will include all fixtures and other components that exist in the immediate work area.
- Next, a layer of six-mil polyethylene plastic sheeting will be placed on the floor beneath the item or area affected by the maintenance activity. This sheeting will be at least one foot wide and long for each foot above the floor where the work is to be conducted, but will not under any circumstances, be less than six feet by six feet. When the work area is confined by walls, the plastic sheeting will extend up the walls at least one foot, and will be sealed along the top edges with duct tape.
- All work activities involving the ACM will be performed using wet methods, HEPA vacuums, glove bags, mini-enclosures, and/or protective clothing as appropriate to the maintenance activity. These methods are detailed in *Section E-3 of Operations and Maintenance Activities*.
- All repair work done on the damaged or affected ACM will be done with materials such as asbestos-free spackling, plaster, cement, or insulation. The existing ACM affected by the maintenance activity will be sealed with latex paint or an encapsulant, or the appropriate response action as identified in the Management Plan will be implemented.
- All asbestos-containing debris will be saturated with amended water and sealed in double six-mil polyethylene disposal bags. These bags will be labelled as ACM and will be disposed of at an EPA

approved landfill site. All plastic, duct tape, etc., used to cover objects, floors, etc., will be treated as asbestos-contaminated waste and will be disposed of in like manner.

2. **Maintenance Activities other than Small Scale, Short Duration and Major Fiber Release Episodes.**

   Section 40 CFR 763.91 (f)(2) defines a major fiber release episode as the falling or dislodging of more than three square or linear feet of friable ACM.

   For those maintenance activities other than small scale, short duration or for a major fiber release episode, all response actions will be designed by persons accredited to design response actions and conducted by persons accredited to conduct response actions.

   Regardless of the response action designed for the specific activity or repair, the areas involving the work will be sealed off and restricted with signs posted, and prepared for the work in a manner consistent with the procedures outlined for small-scale short duration activities in *Section E-1 of Operations and Maintenance Activities*.

3. **ACM Removal Procedures**

   a. Wet Methods.

   Regardless of the removal method employed, wet methods will always be used where practical during any maintenance activity that involves the disturbance of ACM. In some cases, wet methods will not be employed (working on live electrical equipment, for example) and this will be determined prior to the commencement of the activity.

   At all times, amended water will be used as the wetting agent. Amended water is water that has a surfactant added that restricts evaporation and enhances the penetration of the water into the ACM. Commercially available products such as those containing a concentrate of a 50-50 mixture of polyoxyethylene esters and polyoxyethylene ethers with three percent emulsifier will be used. These products will be added to normal tap water and used as per manufacturer's instructions.

   Amended water will be applied to all ACM using an airless sprayer to minimize disturbance of the ACM. During the maintenance or repair activity, the material will continue to be wetted, as needed, to ensure that all ACM is wet during the activity and remains wet until final disposal.

   b. Glove Bag Techniques

   The glove bag techniques will be used for removal of ACM on small scale activities mainly involving pipes, valves, Tees, fixtures, or other small components of mechanical systems as detailed in Appendix B of Subpart E of 40 CFR 763. Prior to installation and use of the glove bag, signs will be posted and the work area will be sealed off and prepared as detailed in *Section E-1 of Operations and Maintenance Activities*. The worker(s) performing the glove bag operation will be equipped with a disposable Tyvek-type suit and a personal respirator equipped with disposable cartridge filters NIOSH approved for use with asbestos dust.

   After performing all preparatory work and donning personal-protective equipment, the glove bag is cut along the sides to fit around the pipe or fixture to be worked on. All tools necessary to perform the work, as well as a quantity of bridging encapsulant, are inserted into the attached inside pocket of the bag.

   The glove bag is then attached around the work area by folding the open edges together and sealing with staples and tape. The side edges of the glove bag are then sealed using duct tape and/or Velcro ties to form a tight seal. The bottom seam of the bag is also taped to ensure its integrity. Once a tight seal is obtained, the end of a smoke tube is inserted through the marked entry port and a small amount of smoke is squeezed into the bag. After tape sealing the port (and removing the smoke tube), the bag is gently squeezed to allow the smoke to exit through any available leak holes. Leaks identified in this way are sealed with more duct tape, the entry port is opened, and

the bag is squeezed lightly to remove excess smoke. Next, the portable sprayer nozzle is put through the port and the work area is completely wetted with amended water. The nozzle is removed and the HEPA vacuum hose is inserted into the port and sealed tightly with duct tape.

The worker's arms are inserted into the armholes and gloves and the ACM is removed from the work area. When necessary, the amended water spray nozzle is inserted into the bag during removal to ensure that the ACM is kept wet at all times.

When all necessary ACM is removed and the item cleaned of all visible material, a spray nozzle from the encapsulant sprayer is inserted and the pipe fixtures, etc., are sprayed with encapsulant. The rough edges of the cut ACM are then coated/sealed with the bridging encapsulant.

The worker then removes his arms from the armholes and turns on the HEPA vacuum, to remove air from the bag. As the air is being removed from the bag, the bag is squeezed near the top, and twist sealed and taped closed. The HEPA vacuum is turned off, the nozzle removed, and the entry port is sealed tightly. Then the bag is cut along the top and removed from the working area, then placed in a six-mil polyethylene bag for disposal with other contaminated waste materials.

c. Mini-Enclosures

This methodology is employed in areas where glove bags are not practical, such as for the removal of asbestos from a small ventilation system or a short length of duct as detailed in Appendix B of Subpart E of 40 CFR 763.

The mini-enclosure will vary in construction, shape, and size, depending upon the specific requirements of an individual activity. In general, all mini-enclosures will be constructed according to the following criteria:

- The structure will consist of six-mil polyethylene plastic sheeting supported by a preconstructed framework of 2" by 4" studs formed around the work area. The plastic will be stapled and taped to the framework. Two layers of sheeting will be used, one attached to the studs on the inside of the mini-enclosure and the other on the outside.

- The structure will be minimized in size so as to allow entry to only the number of workers directly involved with the maintenance activity. Where possible, the number of workers will be restricted to one or two maximum.

- The floor inside the mini-enclosure will be covered with two layers of six-mil plastic and will extend no less than one foot up each wall where it will be tape sealed to the wall's plastic. All penetrations into or through the mini-enclosure, such as pipe runs, will be sealed with duct tape.

- A small change room (approximately three feet by three feet by seven feet) will be constructed contiguous to the mini-enclosures. Entry to the change room and from the change room to the mini-enclosure will be through double plastic-sheeted entryways. The first layer of plastic in the entryway will be sealed to the doorway at the top and on the right side, the second layer will be sealed at the top and on the left side.

- After completing the maintenance or repair activity, the worker will enter the change room, HEPA vacuum his disposable coveralls, and remove them prior to leaving the change room. He will then wet wipe his respirator, leaving it on until exiting the change room.

- During the ACM removal, the workers will wear protective coveralls and dual cartridge respirators NIOSH-rated for asbestos dust. Wet methods of removal using amended water will be used at all times in the mini-enclosure. As in glove bag removal,

following the removal of ACM the working areas will be sprayed with encapsulant and exposed cut ACM will be coated with a bridging encapsulant when appropriate.

- Next, all debris in the mini-enclosure will be placed in double six-mil polyethylene bags labelled appropriately for disposal of ACM. The bags will be wet cleaned before removal from the work area through the change room. All interior surfaces of the mini-enclosure will then be cleaned using HEPA vacuum and or wet cleaning techniques.

- Inside the mini-enclosure, the air will be sprayed with water using an airless sprayer. The worker will start at the top and spray the entire volume down to the floor level in order to remove any airborne asbestos fibers prior to dismantling the mini-enclosure.

- The worker will then proceed to the change room and HEPA vacuum his coveralls and clean and spray the room in the same fashion as the mini-enclosure. He will then wet wipe his respirator while still wearing it, HEPA-vacuum and remove his coveralls, and exit the change room.

- The mini-enclosure will then be dismantled from the outside by removing the plastic and bundling it inwards, rolling it, and placing it in a six-mil bags, labelled for asbestos-contaminated waste and disposed of appropriately. The 2" by 4" studs will be dismantled and stored for further use.

- Following the dismantling of the mini-enclosure the worker removes his respirator and disposes of the cartridges as asbestos-contaminated waste.

F. WASTE DISPOSAL

All asbestos-containing waste material is double-bagged in six-mil polyethylene plastic bags. These bags are preprinted to show that they contain asbestos-containing material. Asbestos waste is kept in a controlled location in a routine maintenance area of the facility. Filled bags of waste are carried to this area and placed in sealable metal or fiber 55-gallon drums. When the drums are full, they are sealed, labelled, and transported to a landfill site approved for asbestos by EPA. Upon arrival at the landfill site, the bags are removed from the drums and handed over to the landfill operator. The drums are wet wiped and returned to the school for re-use. The drums are not re-used if, upon opening, it is observed that one or more of the bags has ruptured inside of the drum. In this case, the drum is resealed and disposed of along with all bags inside of it.

The waste containers are transported to the landfill site in a covered, lockable vehicle and all transported containers are accompanied by a proper chain of custody form that details the origin of the material, date and quantities of transport, types of containers and destination of containers. If transported by a third party hauler, information on the hauler is also included on the form. The chain of custody form is signed at each transfer point and after final transport to the landfill site, a copy of the form is maintained in our records as evidence of receipt at the site. A sample copy of this form is included.

Prior to any transportation of asbestos-containing material, notification will be made to the following parties:

1. Regional US EPA office - written notification will be sent detailing the name and location of the landfill site to be used and the approximate weight and volume of asbestos involved.

2. EPA Certified Landfill Site - Prior to each transport the landfill supervisor will be notified of the weight and volume of the material, the expected date and time of arrival at the site, and the types of containers to be transported.

G. RECORDKEEPING

Permanent records will be kept regarding Operations and Maintenance activities in facilities under the control of the LEA. These include:

1. Whenever any cleaning activity as prescribed in 40 CFR 763.91 (c) is undertaken records will contain the name of the individuals performing the cleaning, the dates of the cleaning, the locations cleaned, the methods utilized, and any other information pertinent to that particular cleaning episode. A copy of the O&M Cleaning Report Form is attached.

2. Whenever any Operations and Maintenance activity is undertaken as outlined in 40 CFR 763.91 (d) records will contain the name and duties of each person involved; the start and completion date and time of the activity; the locations where the activity occurred; a description of the activity; preventive measures used; amount (if any) of ACM removed; and the name and location of the storage or disposal site for the ACM. A copy of the Small-Scale O&M Activity Report Form is attached.

3. Whenever a major activity as described in 40 CFR 763.91 (e) is undertaken, records will indicate the name, signature, state of accreditation, and accreditation number of each person involved; the start and completion date and time; the locations where the activity occurred; a description of the activity; preventive measures used; whether ACBM was removed; and the name and location of the storage or disposal site for the removed material. A copy of the Major O&M Activity Report Form is attached.

4. For every fiber release episode described in 40 CFR 763.91 (f), the records will detail the date, time, and location of the episode; the method of repair; preventive measures or response action taken; the names of those persons doing the work; whether ACBM was removed; and the name and location of the storage or disposal site for the removed material. A copy of the Fiber Release Episode Report Form is attached.

5. Copies of all inspection reports, results and amendments will be kept in the file with the Operations and Maintenance Program and activity reports. This also includes results of any re-inspections or periodic surveillance as prescribed in 40 CFR 763.85 (b) and 40 CFR 763.92 (b).

6. Current lists of all custodians and maintenance personnel including name, address, date of hire, asbestos training course, and dates, as well as copies of certificates from any special related courses taken by the employees. A copy of the Maintenance/Custodial Staff Training Report Form is attached.

7. A current list of all areas where asbestos removal, enclosures, or encapsulation has taken place. A copy of the Asbestos Abatement Activity Record Form is attached.

8. A current inventory of equipment available for Operations and Maintenance activities.

9. Copies of ACM disposal records and/or chain of custody documentation.

All records will be maintained in a single location at the LEA site. Copies of all records and information pertinent to individual facilities will also be maintained at those facilities by the designated campus asbestos coordinator.

H. WARNING LABELS

Warning labels will have been attached immediately adjacent to any friable and non-friable ACBM and assumed ACM located in routine maintenance areas as per 40 CFR 763.95. The labels will be of a size, print, and color which is readily visible to persons entering an area containing ACBM. The labels will read as follows:

****

CAUTION

ASBESTOS HAZARDOUS

DO NOT DISTURB WITHOUT PROPER

TRAINING AND EQUIPMENT

****

I. BUILDING INVENTORY - ALL ACM

See "List of School Buildings and ACM Status" in Section: Management Plan Introduction.

J. PERIODIC SURVEILLANCE

All facilities will undergo a semi-annual surveillance in order to detect deterioration taking place on any ACM in the facility. This will consist of a visual evaluation of the materials and specific records will be maintained detailing the material type, damage, or deterioration noted, as well as any repair or response action undertaken. This semi-annual surveillance will be performed utilizing the protocol defined in the "plan for periodic surveillance" in the management plan.

K. EMERGENCY RESPONSE

In the event of the occurrence of an asbestos-related emergency in a facility under the direction of the LEA, the following procedures will be employed:

1. Immediately upon notice of the emergency, the party involved will vacate the area of involvement and immediately contact the LEA Coordinator and/or his designee at the facility.

2. If the person(s) observing the incident is trained to handle ACM activities, that person(s) will take action to immediately isolate the area of involvement from the rest of the building by evacuating any unnecessary personnel from the area, turning off or isolating all air-moving equipment in the area, isolating the area by closing all entryways, and posting warning signs indicating the presence of a hazardous area.

3. If the person(s) observing the incident is not trained to handle ACM activities, that person will immediately contact a member of the staff who has the appropriate training and alert that person to the problem. The trained staff member will then proceed to take the actions indicated in 2.

4. If the occurrence is of such a size that a response action must be designed by an accredited designer, no further work will be done and the area will remain isolated as in 2. until the appropriate response action can be determined. Otherwise, the appropriate repair/maintenance activity will commence following the performance of the procedures detailed in *Section E-1 of Operations and Maintenance Activities*.

5. Following completion of the repair/maintenance activities, the appropriate forms will be completed as per *Section G-7 Recordkeeping*. These forms will become a part of the permanent Operations and Maintenance records.

L. EQUIPMENT LIST

An Operations and Maintenance Plan involves "specialized" equipment and supplies to resolve and/or control the problems. The materials can be purchased from a number of asbestos or industrial safety supply houses and some can be found in hardware stores. The following materials and equipment are commonly associated with successful operations and maintenance planning.

OPERATIONS AND MAINTENANCE PLANNING MATERIALS AND EQUIPMENT LIST

1. Tyvek disposable coveralls
2. Rubber gloves
3. Half-face dual cartridge negative pressure respirators with NIOSH-approved cartridges
4. Safety goggles
5. Surfactant
6. Misting spray bottle
7. Misting spray tank
8. Dust mop/broom
9. Polyethylene sheeting (six-mil)
10. Asbestos disposal bags (six-mil)
11. Fiber or metal disposal drums
12. Glove bags
13. HEPA Vacuum with attachments
14. Duct tape
15. Hand tools
16. Warning signs and labels
17. Scrim cloth for pipe wrap
18. Foil tape for pipe wrap
19. Encapsulant - bridging and penetrating
20. Smoke tube kits

OPERATIONS AND MAINTENANCE PLANNING
COST AND MATERIALS CHECKLIST

ITEMS	PURCHASED		PER BUILDING	
	Initial	Ongoing	Unit Cost	Quantity
Disposable Tyvek Coveralls w/Hood Bottles X-large				
Rubber gloves				
Half-face negative pressure dual cartridge respirators				
Respirator filters				
Safety goggles				
Surfactant				
Misting spray bottle				
Misting spray tank				
Polyethylene sheeting (six-mil)				
Asbestos disposal bags (six-mil)				
Fiber disposal drums				
Glove bags				
HEPA vacuum with attachments: vacuum bags vacuum filters cone attachment				
Vacuum bags				
Vacuum filters				
Cone attachment				
Duct tape				
Hand tools				
"DANGER: ASBESTOS..." signs & labels				
Scrim cloth for pipe wrap				
Foil tape for pipe wrap				
Encapsulant - penetrating - bridging				
Smoke tube kits				

M. AIR MONITORING

A requirement of 40 CFR 763.91 is that the LEA ascertain, through monitoring or historical data, the airborne concentration of asbestos fibers during all maintenance and repair activities involving ACBM or assumed ACBM. Coverage of EPA's worker protection rule at 40 CFR 763.121 is extended to maintenance and custodial staff at schools who perform Operations and Maintenance activities.

These regulations establish a Permissible Exposure Limit (PEL) of 0.2 fibers per cubic centimeter (f./cm^3) over 8-hours for abatement project workers and an action level of 0.1 f/cm^3 that, once met or exceeded, triggers a number of required work practices including air monitoring, regulated work areas, engineering and work practice controls, respiratory protection, protective clothing, hygiene facilities and practices, training, medical surveillance and recordkeeping.

In response to the requirement of these regulations, 8-hour "time weighted average" air sampling will be conducted in all routine maintenance areas and in general occupancy areas of all buildings so that initial background concentrations of asbestos resulting from the existence of the ACBM may be determined. As well, during any small-scale, short-duration maintenance activity involving ACM, air monitoring will be performed as follows:

- Personal samples will be collected from the breathing zone of the employee(s) performing the maintenance activity.

- Area samples will be collected in the vicinity of the maintenance activity so that a determination may be made of the level of contamination expected to be produced in surrounding areas as a result of the activity.

All air monitoring will be done in accordance with 40 CFR 763.121 including collection on 0.8 micrometer 25-millimeter filters mounted in an open-face filter holder and analysis using the NIOSH 7400 method. The samples will be taken for the determination of the 8-hour time weighted average concentrations and ceiling concentrations of asbestos fibers.

Following analysis of the air filters, results of all analyses will be recorded on the O&M Maintenance Activity form for inclusion in the Operations and Maintenance Program's permanent records. A copy of the Air Monitoring Data and Log is attached.

N. MEDICAL MONITORING

Medical monitoring is required for all employees working on or around ACBM where exposure is likely to exceed the OSHA action level of 0.1 f/cm^3, 8-hour TWA during the course of work. This is required through 40 CFR 763.91's extension of Epa's Worker Protection Rule at 40 CFR 763.121 to maintenance and custodial staff at schools who perform operations and maintenance activities.

This medical monitoring program will be provided to all persons at the cost of the LEA as required by the regulations. The program will consist of the following elements:

- Preplacement Examination - will be provided within 30 days of commencement of employment and will include a medical history, chest X-ray, and pulmonary function test as per 40 CFR 763.121(J)(2).

- Annual Examinations - will be provided at least annually and will include medical history, chest X-ray, and pulmonary function tests as per 40 CFR 763.121(J)(3).

- Termination Examination - will be provided within 30 days pre or post termination date and will include medical history, chest X-ray, and pulmonary function tests as per 40 CFR 763.121(J)(4).

Where determined by medical examination that an individual cannot work while wearing a respirator, that person will not be required or allowed to perform maintenance activities involving ACBM.

Medical records will be maintained in the personnel files and be made available to the Environmental Protection Agency, the Assistant Secretary of Labor for Occupational Safety and Health, the Director of NIOSH, authorized physicians, and upon the request of the employee (or former employee) to his physician. All records will be maintained for at least 20 years as required by 40 CFR 763.121(f)(6).

OPERATIONS AND MAINTENANCE CODES

The following codes are intended for use as reference to the general requirements for Preventive Measures by material types. The codes are referenced in the inspection results location of the Management Plan and are presented here for convenience.

The codes given are for all friable ACBM and non-friable ACBM that have the potential to become friable during school maintenance activities involving the material. In all cases, the description of activities in the Operations and Maintenance Codes refers back to the specific requirements detailed in the Operations and Maintenance program and 40 CFR 763.

OMA - Pipe Insulations and Mudded Joint Fittings

Work area preparation and cleaning must in accordance with the requirement of 40 CFR 763.91(d).

Repair minor dents and tears in the protective jacket with duct tape or bridging encapsulant with glass cloth reinforcement. Duct tape should only be used for temporary control until the bridging encapsulant is installed.

For small-scale, short-duration activities, if glove bag removal is not feasible, wrap uncovered pipe insulation with protective jackets consisting of a bridging encapsulant with glass cloth reinforcement. If a glove bag is used, it must be used in accordance with *Section E-3 of Operations and Maintenance Activities*.

Wrap moderately water damaged or contact damaged pipe insulations with new protective jackets, or re-insulate affected areas. Eliminate the source of the water damage. Any activity other than small-scale, short-duration requires design by a person accredited to design response actions. The activity must be undertaken by those accredited to perform them. Therefore, those types of activities will not be undertaken on a routine basis.

Monitor the condition of the asbestos-containing materials, under procedures outlined in the "Plan for Periodic Surveillance" located in the Management Plan.

Clean area, as necessary, using procedures detailed in *Section D of Additional Cleaning*.

OMB - Insulation on Boilers, Breeching, Ducts, etc.

Work area preparation and cleanup must be in accordance with the requirements of 40 CFR 763.91 (d).

Repair minor dents and tears in insulation on boilers and breeching with a bridging encapsulant with glass cloth reinforcement. Duct tape or non-asbestos mastic should only be used for temporary control until the protective jacket is applied.

Wrap uncovered insulations with new protective jackets or coverings consisting of a bridging encapsulant with glass cloth reinforcement.

Minor damage to duct work insulated with ACM should be repaired with a bridging encapsulant with glass cloth reinforcement. Duct tape or non-asbestos mastic should only be used for temporary control until the protective jacket is applied.

If any small-scale removal is required as a part of the repair process or maintenance activity, then a glove bag or mini-enclosure must be used as described in *Section E-3 of Operations and Maintenance Activities*. Clean the area, as necessary, using procedures detailed in *Section D of Additional Cleaning*.

Monitor the condition of the asbestos-containing materials, under procedures outlined in the "Plan for Periodic Surveillance" located in the Management Plan.

OMC - Fireproofing

Work area preparation and cleaning must be in accordance with the requirements of 40 CFR 763.91(d).

The fireproofing may be sprayed with an encapsulant if the fireproofing is well-bonded to its substrate and is less than one inch thick. This is to be considered a temporary control measure with a life expectancy of five to six years. Test results have shown that, due to the impact of the spray, spraying with an encapsulant can, on occasion, cause more fibers than a gross wet removal project. ACM removal, enclosure or encapsulation, can only be performed if it is classified as a small-scale, short-duration maintenance activity NOT intended as asbestos abatement as defined in Appendix B to Subpart E of 40 CFR 763.91. In cases where the activity is not small-scale, the activity must be designed and performed by an accredited person.

Use caution when work involved hanging ducts, conduit or pipes, etc. from surfaces sprayed with fireproofing. Avoid disturbing fireproofing whenever possible.

All materials must be monitored as detailed in the section "Plans for Periodic Surveillance" located in the Management Plan.

Clean the area, as necessary, using procedures detailed in *Section D of Additional Cleaning.*

OMD - Acoustical Plasters (Sprayed On/Trowelled On)

If the plaster is in good condition, with no delamination, deterioration or signs of water damage, it should be left alone but carefully monitored for signs of change in status. This must be performed as detailed in the "Plan for Periodic Surveillance" in the Management Plan.

If the plaster is water damaged and/or is becoming delaminated from the substrate, it should be removed rather than encapsulated. Encapsulation can make the condition worse by increasing the rate of delamination. The source of the water damage must be eliminated. Unless the required removal is a part of a required small-scale, short-duration maintenance activity then the removal/repair must be designed and performed by an accredited person.

Avoid disturbing acoustical plaster by not hanging plants, drilling holes in the ceiling, moving furniture, etc. Work area preparation and cleanup for all types of maintenance work must be in accordance with the requirements of 40 CFR 763.912(d). When the plaster must be disturbed, mist the affected area with amended water and use a HEPA vacuum to collect fibers being released.

All materials must be monitored as detailed in the section "Plans for Periodic Surveillance" located in the Management Plan.

Clean the area, as necessary, using procedures detailed in *Section D of Additional Cleaning.*

OMF - Debris

Work area preparation and cleanup must be in accordance with the requirements of 40 CFR 763.91(f) for minor fiber release episodes (three square or linear feet or less of friable ACM).

Small amounts can be cleaned up using a HEPA vacuum and wet wiping or set mopping. Dispose of larger pieces by misting and carefully moving the pieces to an asbestos disposal bag to be properly discarded. Repair of the damaged material that resulted in the debris must be performed as per 40 CFR 763.91 (f)(iv).

OMG - Ceiling Tiles

Work area preparation and cleanup must be in accordance with the requirements of 40 CFR 763.91(f) for minor fiber release episodes (three square or linear feet or less of friable ACM).

When ceiling tiles are noted as asbestos-containing materials, precautions can be taken to greatly minimize exposure from the tiles.

Whenever the tiles are cut, broken, or damaged, they should be disposed of properly and replaced by new tiles. Replacement tiles must be asbestos free. Tiles should never be broken to fit into an asbestos disposal bag. Any activity other than small-scale, short-duration maintenance activities must be designed and performed by an accredited person.

All materials must be monitored as detailed in the section "Plans for Periodic Surveillance" located in the Management Plan.

OMH - Tape/Woven Paper

Work area preparation and cleanup must be in accordance with the requirements of 40 CFR 763.91(f).

Asbestos-containing tape is used primarily for sealing seams on duct work. Loose or frayed ends of the tape must be wetted with amended water, cut, and properly disposed. Care must be taken not to damage the tape by ripping or tearing it during this procedure.

Damaged tape should be carefully painted with a bridging encapsulant with minimal overspray or overbrushing. When the tape must be disturbed, mist it with amended water (unless the disturbance is due to the encapsulation process) and use a HEPA vacuum to collect fibers being released.

OMI - Miscellaneous/ Cementitious Materials

Fiber release from cementitious (non-friable) materials is normally extremely low, unless these materials are broken, drilled, sanded or otherwise disturbed. During disturbance, the material should be thoroughly dampened and a HEPA vacuum used to collect fibers being released. Work area preparation and cleanup must be in accordance with 40 CFR 763.91(d). Some examples of cementitious materials that may contain asbestos are:

- Floor tiles
- Tile underlay
- Wall plasters (some)
- Transite pipes
- Scratch coats
- Drywall plaster (some)
- Transite panelling
- Linoleum
- Asbestos cement pipes

OMZ - Other Materials

This code applies to miscellaneous ACM that rarely creates a significant problem but can pose an exposure risk when being damaged or removed. Listed are some of the asbestos-containing materials that fall into this classification. If an asbestos-containing material is not directly addressed in the operations and maintenance codes, an operations and maintenance procedure may be applied using one or more of the codes that involve similar materials. All disposal must be in accordance with *Section F of Waste Disposal*.

Batt Insulation - Cutting or tearing the asbestos-layered paper backing can cause fiber release. Wet the backing with amended water and wear a half-face respirator if batting needs to be cut or moved.

Friable Wallboard - Precautions must be taken to minimize exposure from the wallboard. Replace broken or damaged wallboard with a non-asbestos material. If removal is necessary, wet the material and try to remove it in one piece. The wallboard must never be broken up to fit into an asbestos disposal bag.

Vibration Joint Cloth - Vibration joint cloth is most often found on duct work near air handlers. Loose or frayed ends should be wet with amended water or a diluted encapsulant. Carefully cut and remove the joint cloth and dispose of properly.

Earth Floors - When mechanical insulations located in crawl spaces or tunnels deteriorate or are damaged, the earth floors beneath them can become contaminated. Often the asbestos materials are broken up and ground into the loose earth by maintenance workers performing work in these areas. All work involving contaminated soil must be designed and performed by accredited persons.

Vinyl Asbestos Floor Tiles (VAT) - Damaged, vinyl floor tiles can become friable and could present a problem when a small-scale, short-duration maintenance activity requires removal of small areas of VAT, work area preparation and cleaning must be in accordance with 40 CFR 763.91 (d). Mix amended water to a slightly stronger than normal strength. Spray the entire surface of the tiles to be removed, wait six to eight hours and repeat the spraying. Most vinyl

asbestos tile glues are water soluble and the tiles will loosen so that they may be physically removed, placed in a sealed plastic bag, and disposed of as asbestos waste. When the tiles are loose, the ends will curl up or under. Always dispose of the paper underlay material with the VAT, as it usually contains asbestos. In most cases, VAT removal will be designed and performed by accredited persons.

INITIAL/ADDITIONAL CLEANING RECOMMENDATIONS

(Supplement to O&M Plan)

This section is provided as a supplement to the Operations and Maintenance Plan included in this document, as required by 40 CFR 763.91 (c) and 763.93 (e)(9).

The AHERA regulations require that each LEA which after inspection was found to contain areas with friable ACBM, damaged or significantly damaged thermal system insulation ACM, or friable suspected ACBM assumed to be ACM, the area(s) will be asbestos cleaned at least once after the completion of the inspection and before the initiation of any response action other than O&M Procedures or repair. The procedures for the required cleaning are found in 40 CFR 41852; however, a more detailed description is found in the body of the O&M Plan, "Initial Cleaning".

Hall-Kimbrell and the accredited Management Planner agree with the EPA to the need for a thorough asbestos cleaning of the areas described above. That initial cleaning measure is necessary in order to collect and remove as much of the settled asbestos dust and fibers as possible that have been deposited over the past months or years. However, all materials containing asbestos should not be treated equally under this provision, since depending on the material's degree of friability, accessibility, asbestos content, condition, and other variables, the amount of asbestos contamination in and around the area will vary greatly. The accredited inspector performed an assessment of the materials taking into consideration these and other variables which contribute to the likelihood/probability of routine or accidental fall out and possible building occupant exposure. The relative degree of exposure potential and, therefore, past fall out probability are inter-related in that a material whose damage category has been determined to be damaged or significantly damaged has a very high probability of having produced a higher degree of area contamination than a similar material with a rating of "potential for damage".

In order to aid the school district in understanding the relative degrees of exposure and/or contamination potential and probability, Hall-Kimbrell has provided three (3) priority ranking categories. Hall-Kimbrell's recommendation for cleaning in and around the areas is as follows:

Priority 1 Materials/Areas

A) Initial cleaning as described in the O&M Plan as soon as feasible but in no event later than July 9, 1989.

B) Additional cleaning as was performed initially at least once every two months until materials are abated.

Priority 2 Materials/Areas

A) Initial cleaning as described in O&M Plan no later than July 9, 1989. NOTE: For economic efficiency, the LEA should perform the initial cleaning at the same time as the Priority I materials/areas are cleaned.

B) Additional cleaning, as was performed initially, at least once every six months thereafter until materials are abated.

Priority 3 Materials/Areas

Since these materials are either non-friable ACBM, non-friable assumed ACM, or other well-bound miscellaneous material with a low likelihood of exposure potential or contamination under routine use, Hall-Kimbrell does not feel that initial nor additional cleaning is absolutely necessary. However, since past renovations, remodeling, or other possible disturbance may have occurred and unknown to Hall-Kimbrell the school district should use its best judgement based on past activities in determining whether these Priority III materials should be treated otherwise.

LEA Response to Cleaning Recommendations

The AHERA regulations require that the LEA provide a response to the management planner's cleaning recommendations. If you agree with the recommendations provided and agree to conduct the necessary cleaning based on the schedule recommended indicate by checking the first block. If you do not agree and plan to carry out an alternative, additional cleaning schedule, please indicate by checking the second block and provide a description of the cleaning plan the LEA will perform.

__ I do agree with the recommendations and cleaning schedule and will carry out the plan according to that schedule.

_X_ I do not agree with the recommended schedule for additional cleaning and elect the following:

Initial cleaning will be performed prior to the initiation of any response act other than O&M or repair. Additional cleaning will be performed when it is deemed necessary by the LEA.

THREE RIVERS
ENVIRONMENTAL, Inc.

Introduction

January,2000

Three Rivers Environmental, Inc., under the direction of Tim Woodley performed an asbestos survey to identify specific asbestos containing materials (ACMs) that may be present at 5290 West "A" St.West-Linn, Or.

Field investigation was conducted by EPA accredited asbestos inspector Irvin Jones and Robert Montgomery of this office on January 12 2000.

The purpose of this survey was to provide information in order to meet the AHERA asbestos sampling protocol as stated in 40 CFR 763.86. This sampling protocol is required for all asbestos surveys under Oregon Department of Environmental Quality, prior to performing any renovation or demolition activities.

In addition, this survey meets the "Good Faith" inspection requirements as stated in Oregon Occupational Safety and Health Code, General Industry Standard OAR 437-02-1910.100, Identification. Under the regulation, the Owner of a building to be renovated or demolished is require to provide a written statement as to whether the materials to be disturbed contain asbestos.

The inspection consisted of visual and tactile examination of all accessible portions of the surveyed area. All observed suspect asbestos containing materials were sampled in accordance with the Asbestos Hazard Emergency Response Act (AHERA) protocol, and submitted for laboratory analysis. All asbestos sample analysis was performed by American Industrial Hygiene Association (AIHA) and National Volunteer Laboratory Accreditation Program (NVLAP) Accredited Laboratories.

The results of our asbestos survey indicate that the structure located at the above mentioned address does contain asbestos building materials.

Please contact us with any questions or comments regarding the contents of this report.

Sincerely;

Darren D. Lee
Vice President
Three Rivers Environmental, Inc.

INVESTIGATIVE METHODS

A walk through inspection of all accessible areas of the facilities are performed to identify suspect asbestos-containing-building-materials (ACBM) and presumed-asbestos-containing-materials (PACM). A thorough investigation of suspect ACBM in hidden spaces are also conducted. Materials which may be buried on the property were not investigated.

During any scheduled demolition activities, given that materials different from those identified, may be uncovered during the demolition process. If such suspect materials are discovered, samples of these materials should be collected and analyzed for asbestos content before these materials are disturbed.

Upon identifying a suspect material, its location and type are noted. Samples are obtained, placed in plastic bags, and labeled with a number. Samples are collected to achieve a representative characterization of the visible suspect asbestos-containing materials found.

All samples are taken within EPA guidelines to minimize potential contamination to the surrounding area. Bulk samples location, notes, photographs, and observations are made on-site at the time of sampling. All applicable sample collection data are transferred to a corresponding Chain-of-Custody sample data sheet. Chain-of-Custody sheets are located behind the Bulk Asbestos Sample Analysis Sheet within our survey.

For all asbestos samples, the bulk sample identification number indicates the building from which the sample was taken, the numerical sequence in which the samples are taken, the layer of the material (if applicable), and the homogeneous sampling (HSA).

For Example: IPB-008a-25

IPB	Inpatient Building
008	Homogeneous Sampling Area (HSA)
a/b/c	layer designation
25	25th sample taken

The amount of asbestos in the sample is shown along with an observation of the condition of the material. Approximately <1% in the bulk materials is the limit of Polarized Light Microscopy (PLM) detection for most laboratories. If the microscopist can see no fibers in the sample, the result is reported as "No Asbestos Detected (NAD)."

The bulk suspect ACM samples are analyzed by Environmental Hazards Services, Inc., a National Voluntary Laboratory Accreditation Program (NVLAP) accredited laboratory. The analytical technique is polarized light microscopy (PLM) with dispersion staining. All analyses are performed by trained optical mineralogy technicians competent in bulk asbestos identification. Environmental Hazards Services, Inc. also participates in interlaboratory and intralaboratory quality control programs as recommended by the National Institute of Standards and Technology (NIST) and the EPA.

ASBESTOS BULK SAMPLING PROTOCOL

40 CFR 763.86 Sampling (AHERA Asbestos Sampling Protocol)

(a) **Surfacing material.** An accredited inspector shall collect, in a statistically random manner that is representative of the homogeneous area, bulk samples from each homogeneous area of friable surfacing material that is assumed to be ACM, and shall collect the samples as follows:

(1) At least three bulk samples shall be collected from each homogeneous area that is 1,000 square feet or less, except as provided in 763.87 (c) (2).

(2) At least five bulk samples shall be collected from each homogeneous area that is greater than 1,000 square feet but less than or equal to 5,000 square feet, except as provided in 763.87 (c) (2).

(3) At least seven bulk samples shall be collected from each homogeneous area that is greater than 5,000 square feet, except as provided in 763.87 (c) (2).

(b) **Thermal system insulation**

(1) Except as provided in paragraphs (b) (2) through (4) of this section and 763.87 (c), an accredited inspector shall collect, in a randomly distributed manner, at least three bulk samples from each homogeneous area of thermal system insulation that is not assumed to be ACM.

(2) Collect at least one bulk sample from each homogeneous area of patched thermal system insulation hat is not assumed to be ACM if the patched section is less then six linear or six square feet.

(3) In a manner sufficient to determine whether the material is ACM or not ACM, collect bulk samples from each insulated mechanical system that is not assumed to be ACM where cement or plaster is used on fittings such as tees, elbows, or valves, except as provided under 763.87 (c) (2).

(4) Bulk samples are not required to be collected from any homogeneous area where the accredited inspector has determined that the thermal system insulation is fiberglass, foam glass, rubber, or other non-ACM.

(c) **Miscellaneous material.** In a manner sufficient to determine whether material is ACM or not ACM, an accredited inspector shall collect bulk samples from each homogeneous area of friable miscellaneous material that is not assumed to be ACM.

(d) **Nonfriable suspected ACBM.** If any homogeneous area of nonfriable suspected ACM, has been or will be rendered friable, then an accredited inspector shall collect, in a manner sufficient to determine whether the material is ACM or not ACM, bulk samples from the homogeneous area of nonfriable suspected ACBM that is not assumed to be ACM.

LABORATORY ANALYTICAL METHODS

(1) Stereoscopic Examination and Description:

(a) The sample is examined with a stereomicroscope in a HEPA-filtered hood to determine color, general morphology, and the presence of distinct layers.
(b) The sample is compared with the client description and discrepancies noted.
(c) The sample is teased apart with forceps and tweezers. A description of the sample is entered into the laboratory notebook or directly into the computer.
(d) The presence of fibers is noted, and their general physical characteristics such as morphology, color, elasticity, etc., are described.
(e) Estimates of the percent by volume of each type of fiber in each individual layer is entered into the computer.
(f) Mounts of the different fibers and matrix material are prepared for examination under the polarized light microscope.
(g) If no fibers are observed during this examination, mounts of the matrix materials are made to search for very fine asbestos fibers.
(h) Samples which are hard, or in which the asbestos is tightly bound, may be handled in various ways so that asbestos can be made available for analysis.

(2) Sample Preparation for viewing by PLM:

(a) Two mounts of the sample, including fibers and matrix material, are usually made, one in 1.550 refractive index oil and the other in 1.680 refractive index oil. These oils are used for the two most common types of asbestos; Chrysotile and amosite. Two preparations should provide adequate material to characterize the material under the microscope.

(b) If no fibers are noted, this step is repeated at least once.

(c) Mechanical grinding of the mount using the eraser end of a pencil, or gentle heating of the sample may be required to free the fibers from the binder.

(3) Sample Examination by PLM:

(a) Fibers in the sample are examined to determine if their morphological and crystallographic properties are consistent with those common to asbestos minerals. Optical properties examined include sign of elongation, extinction angles, and determination of the refractive index of the fibers using the Becke Line Method or dispersion staining color techniques.

(b) Additional mounts are made as necessary in order to optically match the refractive index of the fiber to that of the oil. Dispersion staining colors are considered the definitive property on which the identification is based.

(4) Other Characteristics of Asbestos Minerals:

-Fibers will not burn.
-Fibers are resistant to acid.
-Fibers may change their sign of elongation after being subjected to intense heat.
-Fibers may exhibit higher refractive indices after being subjected to intense heat.

(5) Special treatment for samples in which the asbestos is tightly bound may be required for plasters, cements, floor tiles, roofing, and other nonfriable materials. In some cases, the fibers of interest may be found by simply breaking the sample to view a freshly broken surface. Visible fibers may be pulled out and mounted for further examination. If this is not possible, the sample may be broken into smaller pieces, and ground up using a mortar and pestle or dissolved using solvents and gravimetric techniques as recommended by the Research Triangle Institute Draft Test Method for the Determination of Asbestos in Bulk Building Material, July, 1991.

(6) Quantification of Materials Present:

(a) For the most part, if asbestos is present in amounts greater than 3%, quantification is fairly reliable. In the samples where the asbestos levels are closer to 1%, quantification is more difficult and often due to some subjectivity on part of the analyst.

(b) Quantification by weight or volume of asbestos in a sample is based on the relative volumes of asbestos compared to other material present. The quantification is subjective and makes the assumptions that the densities of materials present are approximately the same and that the volumes can be reasonable estimated from a two-dimensional view.

(c) Analysts are "calibrated" by analyzing known-weight samples and by reference samples provided by NIST.

(7) Final Evaluation and Recording:

(a) A description of the sample and all properties of asbestos fibers and their final percentages found during the analysis are recorded in the laboratory notebook or the computer.

(b) A final percentage by volume is reported for the non-asbestos fibers identified and reported in the same manner.

(c) Nonfibrous accessory phases, fillers, and binders are noted where identifiable.

(8) Completion of Sample Report:

(a) When the sample analysis and data recording is complete, the Chain-of-Custody form is signed by the analyst.

(b) The bulk data is stored in the computer of Lab Notebook includes the optical data justifying the analysis. Hard copies of the analytical data and computer backups are generated on a weekly basis.

(c) The final Bulk Sample Report is printed and reviewed by the analyst and/or Laboratory Manager who signs the computerized copy. The original signed copy is sent to the client along with a copy of the Chain-of-Custody, the original of which is maintained on file with the lab.

(9) Quality Control Issues:

(a) Contamination: All manipulation of the samples outside of the sample container is performed inside the HEPA-filtered hood. All laboratory work surfaces in and out of the hoods are kept clean before, during and after sample analysis using wet wipes to clean any debris which may result from sample manipulation. Tools used for analysis are cleaned before, during and after each sample analysis using wet wipes and chem wipes. Care is used to assure tools remain clean to avoid cross contamination between samples. Spray bottles of amended water are kept at each station preparation. Only clean microscope slides and coverslips are used. Each sample is completed and the sample container is closed before the next sample is begun.

Monthly air sampling is performed in the laboratory to ascertain the level of fibrous material in the air. If results of the PCM analysis show fiber levels greater than 0.01 fibers per cc of air, the sample will be sent for analysis by TEM.

(b) Intralaboratory and Interlaboratory Quality Control: In cases of a questionable analysis, such as when the asbestos is detected at or around 1%, when the asbestos has been altered, or when an uncommon type of asbestos is found, a split of the sample will be analyzed by a second analyst or will be sent to a NVLAP accredited laboratory for confirmation. Approximately 10% of all samples are submitted for blind reanalysis either as duplicate or replicate samples. These samples are chosen at random and include samples which contain asbestos, and those which do not. The samples may be analyzed by a different analyst by the original analyst. These results are recorded in the Laboratory QC Notebook, and compared with the original result.

The bulk laboratory participates in a Interlaboratory Quality Assurance Program (IQAP) round robin asbestos sample exchange program. Results from at least three other participating laboratories are returned to the laboratory for comparison. Any discrepancies are noted and the sample re-submitted to the analyst whose analysis resulted in a discrepancy. This analyst repeats the sample and records the repeat analysis. It is the Laboratory Manager's responsibility to notify the client of any change in analytical result from that which was originally reported, this notification is also kept on file by the laboratory.

Asbestos Material Summary

SAMPLE#	HSA#	MATERIAL DESCRIPTION	LOCATIONS	QUANTITY	CONDITION	PHOTO#	% ASBESTOS

Feng Jiang, MS, Senior Geologist

Results represent the analysis of samples submitted by the client. Sample location, description, area, volume, etc., was provided by the client. This report cannot be used by the client to claim product endorsement by NVLAP or any agency of the U.S. Government. This report shall not be reproduced except in full, without the written consent of Environmental Hazards Services, L.L.C. California Certification #2319

Environmental Hazards Services, L.L.C. recommends reanalysis by point count (for more accurate quantification) or Transmission Electron Microscopy ((TEM), for enhanced detection capabilities) for materials regulated by the EPA NESHAP (National Emission Standards for Hazardous Air Pollutants) and found to contain less than ten percent (<10%) asbestos by polarized light microscopy (PLM). Both services are available for an additional fee.

LEGEND NAD = no asbestos detected
SCF = suspected ceramic fibers

THE AMERICAN
ASSOCIATION
FOR LABORATORY
ACCREDITATION

ACCREDITED LABORATORY

A2LA has accredited

ENVIRONMENTAL HAZARDS SERVICES, L.L.C.
Richmond, VA

for technical competence in the field of

Environmental Testing

The accreditation covers the specific tests and types of tests listed on the agreed scope of accreditation. This laboratory meets the requirements of ISO/IEC Guide 25-1990 "General Requirements for the Competence of Calibration and Testing Laboratories" (equivalent to relevant requirements of the ISO 9000 series of standards) and any additional program requirements in the identified field of testing.

Presented this 12th day of January, 1999.

President
For the Accreditation Council
Certificate Number 716.01
Valid to 08/31/2000

For tests or types of tests to which this accreditation applies, please refer to the laboratory's Environmental Scope of Accreditation.

THE AMERICAN ASSOCIATION
FOR LABORATORY ACCREDITATION

A2LA has accredited

Environmental Hazards Services, L.L.C.

Richmond, VA

under the

ENVIRONMENTAL LEAD (Pb) TESTING LABORATORY ACCREDITATION PROGRAM

By virtue of the on site assessment of this laboratory's environmental lead (Pb) testing capabilities and successful participation in the Environmental Lead Proficiency Analytical Testing Program (ELPAT), this laboratory has been found to meet the A2LA Environmental Lead (Pb) Program Requirements. As such, this laboratory is recognized under the EPA Office of Pollution Prevention and Toxics' (OPPT) National Lead Laboratory Accreditation Program (NLLAP) for the matrices of dust, soil and paint chips (residue). The laboratory's A2LA accreditation covers the following matrices: dust, soil, paint chips (residue), air and building debris.

Presented this 12th day of January, 1999.

President
For the Accreditation Council
Certificate Number 716.01

ENVIRONMENTAL

Valid To: August 31, 2000 Certificate Number: 0716-01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform recognized EPA methods using the following testing technologies and in the analyte categories identified below:

Testing Technologies: Atomic Absorption/ICP-AES Spectrometry, Atomic Absorption-Flame, Hazardous Waste Characteristics Tests

Nonpotable Water

Metals: Al, Sb, As, Ba, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Hg, Mo, Ni, K, Se, Ag, Na, Tl, Sn, Ti, V, Zn

per EPA test methods SW 6010, 7420, 7470

Solid/Hazardous Waste

Metals: Al, Sb, As, Ba, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Hg, Mo, Ni, K, Se, Ag, Na, Tl, Sn, Ti, V, Zn

per EPA test methods SW 6010, 7420, 7470

Hazardous Waste Characteristics Test: TCLP

per EPA test method SW 1311

Environmental Lead: soil, paint chips (residue), dust, air, building debris

sample preparation
per EPA test methods SW3050A (soils, building debris); 3050A modified (paints, wipes)
per NIOSH test method 7082 (air)
per EPA test method 600/R-93/200 (sonification – air, paint, soil)

sample analysis
per EPA test methods SW 6010A, 7420
per NIOSH methods 7082, 7300

REINSPECTIONS

This section reflects requirements outlined in 40 CFR 763.85 (b) (l) through (c)

ACTION: Reinspection is recommended every 3 years.

TRAINING: Accredited Inspector/Management Planner.
Decide if you will train in-house people or not.

FORM: Update management plan using Inspector's report format.

At least once every three years, after the Management Plan is in effect, all buildings should be reinspected by an accredited Inspector. This differs from the periodic surveillance and is more comprehensive because the material is actually touched to determine friability or change in friability, along with noting assessment criteria such as condition. The reinspection may also include additional samples of suspect material, accessing previously inaccessible areas, and other activities. The person performing these tasks should, at least, be an accredited Inspector. An accredited Management Planner may be necessary to recommend additional response actions.

The decisions an LEA must make prior to this reinspection is to either train their in-house staff to perform the reinspection or utilize an outside consultant.

The AHERA-accredited Inspector training course is three days long, with a 50-question exam that must be passed. An AHERA Management Planner training course is an additional two days with another 50-question exam. If a person is presently an accredited Inspector or Management Planner, they must have an annual refresher course to keep their accreditation current.

RECORDKEEPING:

Keep the reinspection records in this TAB section, along with any new data. New sample locations should be noted on copies of the drawings in TAB 7, and then filed in this section.

Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action:

AHERA Re-inspection

Material: **Boiler/tank insulation, USA 02**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: Boiler, DHW exchange tanks

Quantity: Approximately 60 sq. ft.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action:

AHERA Re-inspection

Material: **Domestic hot water/MJP on corrugated pipe cover, USA 02**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: Joints, S.W. corner

Quantity: Approximately 30 ln. ft.-4 in. O.D. domestic hot water
25 ln. ft.-6 in. O.D. domestic hot water
19 ln. ft.-8 in. O.D. domestic hot water

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action:

AHERA Re-inspection

Material: **Domestic hot water/corrugated pipe cover, USA 02**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: Piping; S.W. corner

Quantity: Approximately 175 ln. ft.-4 in. O.D. domestic hot water
65 ln. ft.-6 in. O.D. domestic hot water
65 ln. ft.-8 in. O.D. domestic hot water

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action:

AHERA Re-inspection

Material: **Low pressure steam/pipe covering, USA 03**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: All floors in building

Quantity: Approximately 150 ln. ft.-4 in. O.D.
850 ln. ft.-6 in. O.D.
980 ln. ft.-8 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Reassess quantity and location, maintain in an intact and undamaged condition

AHERA Re-inspection

Material: **Low pressure team/MJP on pipe covering, USA 04**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: All floors in building

Quantity: Approximately 200 ln. ft.-4 in. O.D.
165 ln. ft.-6 in. O.D.
150 ln. ft.-8 in. O.D.
20 ln. ft.-12 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Reassess quantity and location, maintain in an intact and undamaged condition

AHERA Re-inspection

Material: **Domestic hot water/pipe covering, USA 05**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: All floors in building

Quantity: Approximately 1,500 ln. ft.-4 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Reassess quantity and location, maintain in an intact and undamaged condition

AHERA Re-inspection

Material: **Domestic hot water/MJP on pipe covering, USA 06**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: All floors in building

Quantity: Approximately 330 ln. ft.-4 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Reassess quantity and location, maintain in an intact and undamaged condition

AHERA Re-inspection

Material: **Domestic cold water/corrugated pipe covering, USA 07**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: All floors in building

Quantity: Approximately 925 ln. ft.-4 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Reassess quantity and location, maintain in an intact and undamaged condition

AHERA Re-inspection

Material: **Domestic cold water/MJP on corrugated pipe cover, USA 08**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: All floors in building

Quantity: Approximately 145 ln. ft.-4 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Reassess quantity and location, maintain in an intact and undamaged condition

AHERA Re-inspection

Material: **Acoustical/thermal plaster, USA 11**

Description: Surfacing

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: First floor

Quantity: Approximately 21,531 sq. ft.

Potential for disturbance:

Potential for contact:
Effect of vibration:
Potential for air erosion:

Overall condition:

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action:

AHERA Re-inspection

Material: **Low pressure steam/pipe covering, USA 50**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: Gym

Quantity: Approximately 5 ln. ft.-8 in. O.D.
5 ln. ft.-6 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

AHERA Re-inspection

Material: **Domestic hot water/MJP on pipe covering, USA 61**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: Tunnels

Quantity: Approximately 45 ln. ft.-4 in. O.D.
28 ln. ft.-6 in. O.D.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category: Unchanged

Recommended response action:

AHERA Re-inspection

Material: **Vinyl floor tile, USA 97**

Description: Miscellaneous

Sampled or Assumed: Surfacing

Friable or Non-Friable: Non-friable

Locations: All floors in building

Quantity: Approximately 50,000 sq. ft.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action:

AHERA Re-inspection

Material: **Transite siding, USA 98**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: All floors in building

Quantity: Approximately 400 sq. ft.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action: Reassess quantity and location

AHERA Re-inspection

Material: **Vinyl floor tile, USA 99**

Description: Miscellaneous

Sampled or Assumed: Sampled

Friable or Non-Friable: Non-friable

Locations: All floors in building

Quantity: Approximately 86,055 sq. ft.

Potential for disturbance:

Potential for contact: high
Effect of vibration: low
Potential for air erosion: low

Overall condition: fair

Change in condition from last inspection: yes
Assessment noted: 8 locations W. end of Cafeteria and library, material torn loose from floor (20 sq. ft.)

Previous AHERA category: ACBM with potential for damage

New AHERA category: Damaged miscellaneous material

Recommended response action: Repair damaged area and maintain in an intact and undamaged condition.

AHERA Re-inspection

Material: **Mag Lines**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: Under old building (E & W)

Quantity: Approximately 600 ln. ft. of piping with approx. 50 hard fittings

Potential for disturbance:

Potential for contact: low-piping running under building and over ceiling
Effect of vibration: low
Potential for air erosion: low

Overall condition: poor

Change in condition from last inspection: yes
Assessment noted: Exposed mag with debris, 40 ln. ft. of damage at hangers and floor extrusion, 30-40 sq. ft. debris in crawl space (access closet W. end hallway)

Previous AHERA category: ACBM with potential for damage

New AHERA category: Damaged or significantly damaged TSI

Recommended response action: Repair damaged area and maintain in an intact and undamaged condition.

AHERA Re-inspection

Material: **Sheet Vinyl**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Library

Quantity: Approximately 300 sq. ft.

Potential for disturbance:

Potential for contact: high-vinyl flooring
Effect of vibration: moderate-heavy to moderate traffic
Potential for air erosion: low

Overall condition: fair

Change in condition from last inspection: yes
Assessment noted: Abated Summer 1999

Previous AHERA category: ACBM with potential for damage

New AHERA category:

Recommended response action:

AHERA Re-inspection

Material: **Corrugated Pipe Cover**

Description: TSI

Sampled or Assumed: Sampled

Friable or Non-Friable: Friable

Locations: Rm. E. side of weight room

Quantity: Approximately 40 ln. ft.

Potential for disturbance:

Potential for contact: high-in storage room
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition

AHERA Re-inspection

Material: **Hard Fittings**

Description: TSI

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Wood shop entrance

Quantity: Approximately 16 hard fittings

Potential for disturbance:

Potential for contact: moderate-above drop ceiling by heating duct
Effect of vibration: low
Potential for air erosion: low

Overall condition: fair

Change in condition from last inspection: yes
Assessment noted: Patch & repair, 4 hard fittings damaged, w/debris 6 sq. ft. on drop ceiling (foyer of entrance to wood shop)

Previous AHERA category: ACBM with potential for damage

New AHERA category: Damaged or significantly damaged TSI

Recommended response action: Clean-up debris and repair damaged area and maintain in an intact and undamaged condition

AHERA Re-inspection

Material: Drywall taping compound

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: **Sheet vinyl mastic**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Under sheet vinyl, various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: **Sheet vinyl**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Window putty

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Throughout school (on exterior windows)

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Fire doors

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Description: Surfacing

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: high
Effect of vibration: low
Potential for air erosion: moderate

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: Any remaining friable ACBM or friable suspect ACBM

New AHERA category: Any remaining friable ACBM or friable suspect ACBM

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: **Electrical wire casing**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Stage lights

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: Any remaining friable ACBM or friable suspect ACBM

New AHERA category: Any remaining friable ACBM or friable suspect ACBM

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: **Drop-in ceiling tile**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: moderate
Effect of vibration: low
Potential for air erosion: moderate

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: Any remaining friable ACBM or friable suspect ACBM

New AHERA category: Any remaining friable ACBM or friable suspect ACBM

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: **Vinyl floor tile, USA 99**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: All floors in building

Quantity: Approximately 10,000 sq. ft.

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: Unchanged

Recommended response action: Reassess quantity and locations

AHERA Re-inspection

Material: Drywall taping compound

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: **Sheet vinyl mastic**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Under sheet vinyl, various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: **Sheet vinyl**

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Window putty

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Throughout school (on exterior windows)

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Fire doors

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Cove base mastic

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: Throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Chalkboards

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Non-friable

Locations: In classrooms throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: ACBM with potential for damage

New AHERA category: ACBM with potential for damage

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Paint, interior

Description: Surfacing

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: high
Effect of vibration: low
Potential for air erosion: moderate

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: Any remaining friable ACBM or friable suspect ACBM

New AHERA category: Any remaining friable ACBM or friable suspect ACBM

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Electrical wire casing

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Stage lights

Quantity: Not quantified

Potential for disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: Any remaining friable ACBM or friable suspect ACBM

New AHERA category: Any remaining friable ACBM or friable suspect ACBM

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA Re-inspection

Material: Drop-in ceiling tile

Description: Miscellaneous

Sampled or Assumed: Assumed

Friable or Non-Friable: Friable

Locations: Various locations throughout school

Quantity: Not quantified

Potential for disturbance:

Potential for contact: moderate
Effect of vibration: low
Potential for air erosion: moderate

Overall condition: good

Change in condition from last inspection: no
Assessment noted:

Previous AHERA category: Any remaining friable ACBM or friable suspect ACBM

New AHERA category: Any remaining friable ACBM or friable suspect ACBM

Recommended response action: Maintain in an intact and undamaged condition, conduct six-month inspection cycle

AHERA

Three Year Asbestos Reinspection

for

WEST LINN-WILSONVILLE SCHOOL DISTRICT 3JT

West Linn High School
5464 West "A" St.
West Linn, OR

Project No. 1020-15

September 1998

Prepared by

P.O. Box 216, Gladstone, Oregon 97207 (503) 557-2396 Fax (503) 557-3025

AHERA Re-inspection

Material: Boiler/Tank Insulation/Mechanical Insulation USA 01

Description: TSI, Sampled, Friable

Locations: North Boiler, South Boiler, DHW Tank

Quantity: Approximately: 600 sq. ft.
600 sq. ft.
300 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Gasket, USA 01

Description: Miscellaneous, Non Friable

Locations: Boiler; Gasket on B1 E. Side

Quantity: Approximately 4 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 01

Description: TSI, Sampled, Friable

Locations: Joints, Between Boiler 1 & 2 E. Side

Quantity: Approximately: 25-10 in. O.D. Low Pressure Steam
30-ft. 12 in. O.D. Low Pressure Steam
25-ft. 14 in. O.D. Low Pressure Steam
39-ft. 6 in. O.D. Low Pressure Steam

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Corrugated Pipe Cover USA 01

Description: TSI, Sampled, Friable

Locations: Joints; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 35-4 in. O.D. Domestic Hot Water
22-6 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Corrugated Pipe Covering USA 01

Description: TSI, Sampled, Friable

Locations: Piping; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 110-4 in. O.D. Domestic Hot Water
75-6 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall *Condition:* good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/Corrugated Pipe Covering, USA 01

Description: TSI, Sampled, Friable

Locations: Piping; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 110-4 in. O.D. Domestic Cold Water
75-6 in. O.D. Domestic Cold Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 01

Description: TSI, Sampled, Friable

Locations: Piping; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 100-10 in. O.D. Low Pressure Steam
130-12 in. O.D. Low Pressure Steam
50-14 in. O.D. Low Pressure Steam
15 in. O.D. Low Pressure Steam

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Boiler/Tank Insulation, USA 02

Description: TSI, Sampled, Friable

Locations: Boiler; DHW Exchange Tanks

Quantity: Approximately 60 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Corrugated Pipe Covering, USA 02

Description: TSI, Sampled, Friable

Locations: Joints; SW Corner

Quantity: Approximately: 30-4 in. O.D. Domestic Hot Water
25- 6 in. O.D. Domestic Hot Water
19-8 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Corrugated Pipe Covering, USA 02

Description: TSI, Sampled, Friable

Locations: Piping, SW Corner

Quantity: Approximately: 175-4 in. O.D. Domestic Hot Water
65-6 in. O.D. Domestic Hot Water
65-8 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 03

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately: 150-4 in. O.D.
850-6 in. O.D.
980-8 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 04

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately: 200-4 in. O.D.
165-6 in. O.D.
150-8 in. O.D.
20-12 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Pipe Covering, USA 05

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 1500-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Pipe Covering, USA 06

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 330-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/Corrugated Pipe Covering, USA 07

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 925-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/MJP on Corrugated Pipe Covering, USA 08

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 145-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Acoustical/Thermal Plaster, USA 11

Description: Surfacing, Sampled, Friable

Locations: First Floor

Quantity: Approximately 21,531 sq. ft.-Removed

Potential For Disturbance:

Potential for contact:
Effect of vibration:
Potential for air erosion:

Overall Condition:

Previous AHERA Category: Removed

New AHERA Category:

Recommendations:

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 50

Description: TSI, Sampled, Friable

Locations: Gym

Quantity: Approximately: 5-8 in. O.D.
5-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 50

Description: TSI, Sampled, Friable

Locations: Gym

Quantity: Approximately: 2-8 in. O.D.
3-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 52

Description: TSI, Sampled, Friable

Locations: Swimming Pool, Front Room

Quantity: Approximately 20-8 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 53

Description: TSI, Sampled, Friable

Locations: Tunnel Access South, Rm. 554

Quantity: Approximately: 40-14 in. O.D.
10-8 in. O.D.
8-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 54

Description: TSI, Sampled, Friable

Locations: Tunnel Access South, Rm. 554

Quantity: Approximately: 4-14 in. O.D.
2-8 in. O.D.
12-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 55

Description: TSI, Sampled, Friable

Locations: Main Building A, Custodial Office

Quantity: Approximately 12-8 in.O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 56

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 460-12 in. O.D.
60-8 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 57

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately 15-12 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/Corrugated Pipe Covering, USA 58

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 60-6 in. O.D.
200-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/MJP on Corrugated Pipe Cover, USA 59

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 40-4 in. O.D.
38-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Pipe Covering, USA 60

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 200-4 in. O.D.
50-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Pipe Covering, USA 61

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 45-4 in. O.D.
28-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Vinyl Floor Tile, USA 97

Description: Miscellaneous, Sampled, Non Friable

Locations: All Floors in Building

Quantity: Approximately 50,000 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Transite Siding, USA 98

Description: Miscellaneous, Assumed, Non Friable

Locations: All Floors in Building

Quantity: Approximately 400 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Vinyl Floor Tile, USA 99

Description: Miscellaneous, Sampled, Non Friable

Locations: All Floors in Building

Quantity: Approximately 86,055 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Transite Siding, USA 98

Description: Miscellaneous, Non Friable

Locations: All Floors in Building.

Quantity: Approximately 10 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Vinyl Floor Tile, USA 99

Description: Miscellaneous, Sampled, Non Friable

Locations: All Floors in Building.

Quantity: Approximately 11,000 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Vinyl Floor Tile, USA 99

Description: Miscellaneous, Sampled, Non Friable

Locations: All Floors in Building.

Quantity: Approximately 10,000 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

THREE RIVERS ENVIRONMENTAL, Inc.

AHERA Reinspection Signature Page

Three Rivers Environmental, Inc. utilized only inspectors accredited as per the EPA Model Accreditation Plan, 40 CFR 763, Subpart E, Appendix C at a minimum. In addition, all inspectors utilized on projects in states which require additional training, qualifications and licensing, met these qualifications and were so licensed in that state. In addition to the EPA required training, Three Rivers Environmental, Inc. inspectors receive extensive field training and further examination prior to project assignment.

The inspection was conducted by the fallowing Three Rivers Environmental, Inc. personnel:

Name	Accreditation	Signature
JEFF SMITH	98-08185	
MATT JOHNSON	98-08182	
SHAWN OLSON	98-08184	

The Management Plan recommendation was developed by the fallowing Three Rivers Environmental, Inc. personnel:

Description: TSI, Sampled, Friable

Locations: Joints, Between Boiler 1 & 2 E. Side

Quantity: Approximately: 25-10 in. O.D. Low Pressure Steam
30-ft. 12 in. O.D. Low Pressure Steam
25-ft. 14 in. O.D. Low Pressure Steam
39-ft. 6 in. O.D. Low Pressure Steam

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Corrugated Pipe Cover USA 01

Description: TSI, Sampled, Friable

Locations: Joints; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 35-4 in. O.D. Domestic Hot Water
22-6 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Corrugated Pipe Covering USA 01

Description: TSI, Sampled, Friable

Locations: Piping; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 110-4 in. O.D. Domestic Hot Water
75-6 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/Corrugated Pipe Covering, USA 01

Description: TSI, Sampled, Friable

Locations: Piping; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 110-4 in. O.D. Domestic Cold Water
75-6 in. O.D. Domestic Cold Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 01

Description: TSI, Sampled, Friable

Locations: Piping; Between Boiler 1 & 2 E. Side

Quantity: Approximately: 100 10 in. O.D. Low Pressure Steam
130-12 in. O.D. Low Pressure Steam
50-14 in. O.D. Low Pressure Steam
15 in. O.D. Low Pressure Steam

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Boiler/Tank Insulation, USA 02

Description: TSI, Sampled, Friable

Locations: Boiler; DHW Exchange Tanks

Quantity: Approximately 60 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Corrugated Pipe Covering, USA 02

Description: TSI, Sampled, Friable

Locations: Joints; SW Corner

Quantity: Approximately: 30-4 in. O.D. Domestic Hot Water
25- 6 in. O.D. Domestic Hot Water
19-8 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Corrugated Pipe Covering, USA 02

Description: TSI, Sampled, Friable

Locations: Piping, SW Corner

Quantity: Approximately: 175-4 in. O.D. Domestic Hot Water
65-6 in. O.D. Domestic Hot Water
65-8 in. O.D. Domestic Hot Water

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 03

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately: 150-4 in. O.D.
850-6 in. O.D.
980-8 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 04

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately: 200-4 in. O.D.
165-6 in. O.D.
150-8 in. O.D.
20-12 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Pipe Covering, USA 05

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 1500-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Pipe Covering, USA 06

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 330-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/Corrugated Pipe Covering, USA 07

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 925-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/MJP on Corrugated Pipe Covering, USA 08

Description: TSI, Sampled, Friable

Locations: All Floors in Building

Quantity: Approximately 145-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Acoustical/Thermal Plaster, USA 11

Description: Surfacing, Sampled, Friable

Locations: First Floor

Quantity: Approximately 21,531 sq. ft.-Removed

Potential For Disturbance:

Potential for contact:
Effect of vibration:
Potential for air erosion:

Overall Condition:

Previous AHERA Category: Removed

New AHERA Category:

Recommendations:

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 50

Description: TSI, Sampled, Friable

Locations: Gym

Quantity: Approximately: 5-8 in. O.D.
5-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 50

Description: TSI, Sampled, Friable

Locations: Gym

Quantity: Approximately: 2-8 in. O.D.
3-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 52

Description: TSI, Sampled, Friable

Locations: Swimming Pool, Front Room

Quantity: Approximately 20-8 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 53

Description: TSI, Sampled, Friable

Locations: Tunnel Access South, Rm. 554

Quantity: Approximately: 40-14 in. O.D.
10-8 in. O.D.
8-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 54

Description: TSI, Sampled, Friable

Locations: Tunnel Access South, Rm. 554

Quantity: Approximately: 4-14 in. O.D.
2-8 in. O.D.
12-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 55

Description: TSI, Sampled, Friable

Locations: Main Building A, Custodial Office

Quantity: Approximately 12-8 in.O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/Pipe Covering, USA 56

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 460-12 in. O.D.
60-8 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Low Pressure Steam/MJP on Pipe Covering, USA 57

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately 15-12 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/Corrugated Pipe Covering, USA 58

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 60-6 in. O.D.
200-4 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Cold Water/MJP on Corrugated Pipe Cover, USA 59

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 40-4 in. O.D.
38-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/Pipe Covering, USA 60

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 200-4 in. O.D.
50-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Domestic Hot Water/MJP on Pipe Covering, USA 61

Description: TSI, Sampled, Friable

Locations: Tunnels

Quantity: Approximately: 45-4 in. O.D.
28-6 in. O.D.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Vinyl Floor Tile, USA 97

Description: Miscellaneous, Sampled, Non Friable

Locations: All Floors in Building

Quantity: Approximately 50,000 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Transite Siding, USA 98

Description: Miscellaneous, Assumed, Non Friable

Locations: All Floors in Building

Quantity: Approximately 400 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Vinyl Floor Tile, USA 99

Description: Miscellaneous, Sampled, Non Friable

Locations: All Floors in Building

Quantity: Approximately 86,055 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance

AHERA Re-inspection

Material: Vinyl Floor Tile, USA 99

Description: Miscellaneous, Sampled, Non Friable

Locations: All Floors in Building.

Quantity: Approximately 10,000 sq. ft.

Potential For Disturbance:

Potential for contact: low
Effect of vibration: low
Potential for air erosion: low

Overall Condition: good

Previous AHERA Category: ACBM With Potential for Damage

New AHERA Category: Unchanged

Recommendations: 6 Month Periodic Surveillance
